Chemistry of Foods

**Series editor**

Salvatore Parisi, Industrial Consultant, Palermo, Italy

The series Springer Briefs in Molecular Science: Chemistry of Foods presents compact topical volumes in the area of food chemistry. The series has a clear focus on the chemistry and chemical aspects of foods, topics such as the physics or biology of foods are not part of its scope. The Briefs volumes in the series aim at presenting chemical background information or an introduction and clear-cut overview on the chemistry related to specific topics in this area. Typical topics thus include: - Compound classes in foods – their chemistry and properties with respect to the foods (e.g. sugars, proteins, fats, minerals, ...) - Contaminants and additives in foods – their chemistry and chemical transformations - Chemical analysis and monitoring of foods - Chemical transformations in foods, evolution and alterations of chemicals in foods, interactions between food and its packaging materials, chemical aspects of the food production processes - Chemistry and the food industry – from safety protocols to modern food production The treated subjects will particularly appeal to professionals and researchers concerned with food chemistry. Many volume topics address professionals and current problems in the food industry, but will also be interesting for readers generally concerned with the chemistry of foods. With the unique format and character of Springer Briefs (50 to 125 pages), the volumes are compact and easily digestible. Briefs allow authors to present their ideas and readers to absorb them with minimal time investment. Briefs will be published as part of Springer's eBook collection, with millions of users worldwide. In addition, Briefs will be available for individual print and electronic purchase. Briefs are characterized by fast, global electronic dissemination, standard publishing contracts, easy-to-use manuscript preparation and formatting guidelines, and expedited production schedules. Both solicited and unsolicited manuscripts focusing on food chemistry are considered for publication in this series.

# Contents

<b>1</b>	<b>Water Reuse in the Food Industry: Quality of Original Wastewater Before Treatments</b> . . . . .	1
1.1	Food Industry and Generated Industrial Effluents: An Overview . . . . .	2
1.2	Water and Wastewater Reutilisation . . . . .	3
1.3	Direct Reuse . . . . .	4
1.4	Indirect Reuse . . . . .	5
1.5	Wastewater Reuse Guidelines . . . . .	6
1.6	Chemical and Physical Features of Wastewater from Food- Related Activities . . . . .	6
1.6.1	Slaughterhouses and Related Wastewater . . . . .	7
1.6.2	Beverage Industries and Related Wastewater . . . . .	8
1.6.3	Alcoholic Beverages Industries and Related Wastewater . . . . .	9
1.6.4	Distillery Companies and Related Wastewater . . . . .	9
1.6.5	Winery Companies and Related Wastewater . . . . .	9
1.6.6	Non-alcoholic Beverages Production and Related Wastewater . . . . .	10
1.6.7	Dairy Industry and Related Wastewater . . . . .	10
1.6.8	Agro-industrial Wastewater . . . . .	11
	References . . . . .	12
<b>2</b>	<b>Wastewater Treatments for the Food Industry:</b> <b>Physical–Chemical Systems</b> . . . . .	17
