Preface

While Extraction 2018 may seem like another new conference, it was actually born out of a membership initiative within three societies to reduce the number of extractive meetings in 2018. Set for August 26–29, 2018, in Ottawa, Canada, Extraction 2018 is the industry's first collaborative global metallurgy conference focused exclusively on extractive topics. As such, we hope it will allow attendees to take stock of the current situation in extractive metallurgy, where issues around geography, resources, environment, and human capital are all in play and making for an ever-changing landscape.

The conference has come to fruition out of the hard work from the staff of the three sponsoring societies. The Society for Mining, Metallurgy & Exploration (SME) has mobilized its team to manage the trade show and sponsorship, while The Minerals, Metals & Materials Society (TMS) has been instrumental in supplying the backbone of the conference for abstract management, author interaction, and marketing. The Metallurgy & Materials Society (MetSoc) of Canadian Institute of Mining, Metallurgy & Petroleum (CIM) organized the logistics for this conference while at the same time holding its first-ever annual meeting outside of Canada at Materials Science & Technology 2018 (MS&T18) in Columbus, Ohio. This opportunity has really allowed the extractive programming to come to Ottawa. The regular contact between societies has been beneficial for everyone and will have lasting positive impacts far after Extraction 2018 is over.

A large number of volunteers from each society were also critical to the organization of the symposia. Each one of them has volunteered considerable personal time to help develop, review, and organize the conference. This includes short courses, tours, and posters, as well as the technical symposia. Extraction 2018 is the home for several important recurring symposia that examine new developments in foundational extractive metallurgy topics and techniques. It also offers new programming designed to share the latest research and insights on emerging technologies and issues that are shaping the global extractive metallurgy industry. The symposia include: 7th International Symposium on Advances in Sulfide Smelting; Peter Hayes Symposium on Pyrometallurgical Processing; Hydrometallurgy 2018;

viii Preface

Gordon Ritcey Symposium: Advances in Hydrometallurgical Solution Purification Separations; Processing of Critical Metals; and finally, Sulfide Flotation.

The response to the conference has been very encouraging—a reflection of the fact that there are actually a number of high-quality symposia being brought to the conference, but also perhaps an indication of the extractive community's interest to meet once without the distraction of large shovels or nanomaterials. It was difficult to balance the number of abstract submissions with the desire to have a manageable conference, and hopefully, the right balance has been found.

It will be a lot to take in, but we hope that everyone will get as much as they can from the conference. When the dust has settled, we will take stock of how things went, and if the stars realign in the future, we might try to do this again. But for now, welcome to Extraction 2018—you are among friends.

Hydrothermal Production of Lithium Metal Silicate Powders with Controlled Properties for Application to Li-ion Batteries Yan Zeng, Karim Zaghib and George P. Demopoulos	2555
Production of Purified Lithium Salts with a One-Stage Solid Phase Extraction	2565
Electrochemical and Diffusion Assisted Dispersion Methods for Lithium-7 Enrichment from Liquid Media	2575
Fundamental Understanding of the Flotation Chemistry of Rare Earth Minerals	2581

xxviii Contents

Simulation of the Flotation of Bear Lodge Ore and a Preliminary	2505
Economic Analysis	2597
Efficient Recovery of Neodymium from Neodymium–Iron–Boron Magnet	2609
Recovery of REEs from End-of-Life Permanent Magnet Scrap Generated in WEEE Recycling Plants Sebastiaan Peelman, Prakash Venkatesan, Shoshan Abrahami and Yongxiang Yang	2619
A Comparison Between Batch and Continuous Processes in Impurity Removal from REE Water Leach Solution by Lime and Limestone Neutralization. Farzaneh Sadri, Zhi Yang and Ahmad Ghahreman	2633
Innovative Coupled Hydrometallurgical and Pyrochemical Processes for Rare Earth Recycling	2647
REE Recovery from the Fern D. Dichotoma by Acid Oxalic Precipitation After Direct Leaching with EDTA Baptiste Laubie, Zeinab Chour, Ye-Tao Tang, Jean-Louis Morel, Marie-Odile Simonnot and Laurence Muhr	2659
Extraction of Cobalt and Nickel from a Pyrrhotite Rich Tailings Sample via Bioleaching	2669
Vanadium Extraction from Low Concentrated Iron Bearing Sources by a New Method	2681
Recovery of Lithium from the Great Salt Lake Brine	2695
Crystallization of a Pure Scandium Phase from Solvent Extraction Strip Liquors	2707
Innovative and Sustainable Valorization Process to Recover Scandium and Rare Earth Elements from Canadian Bauxite Residues John Anawati, Sable Reid and Gisele Azimi	2715

Contents xxix

Extraction of Scandium (Sc) Using a Task-Specific Ionic Liquid Protonated Betaine Bis(Trifluoromethylsulfonyl)Imide [Hbet][Tf ₂ N]	27
Development of Scandium-Recovery Process from Titanium-Smelting	
Residue	27
Early Separation of Cerium from Mixed Rare Earths: A Review of Methods and Preliminary Economic Analysis	27
Oxidative Removal of Cerium from Rare Earth Elements Mixed Chloride Solution	27
Alternatives to 2-Ethylhexyl Phosphonic Acid, Mono-2-Ethylhexyl Ester for the Separation of Rare Earths	27
Production of Partially Separated Rare Earth Elements (REE) from a Quebec Deposit	27
Separation and Purification of Rare-Earth Elements Based on Electrophoretic Migration (PART II)	27
Radionuclide Removal from Ore and REE-Bearing Mineral by Leaching and Ion Exchange Separation	28
Influence of Substrate Properties on the Selective Leaching Performance of Cobalt from Cemented Carbides	28
Rare-Earth Elements Recovery from Nd-Fe-B Hard Magnets by Hydrometallurgical Processes. Haydar Güneş, Hüseyin Eren Obuz, Ezgi Oğur, Furkan Çapraz and Murat Alkan	28

xxx Contents

Part VIII Sulfide Flotation	
The Value of Incremental Performance Improvement in Concentrators—How to Secure and Quantify Small Gains	2847
The Use of Diagnostic Leaching for Flotation Insight	2859
Molybdenite Polytypism and Its Implications for Processing and Recovery: A Geometallurgical-Based Case Study from the Bingham Canyon Mine, Utah	2869
The Importance of Understanding Mineralogy Drivers for Flotation Performance	2881
The Formulation and Use of Mixed Collectors in Sulphide Flotation—Valuable Performance Gains Norman O. Lotter and Deidre J. Bradshaw	2889
The Role of Soluble Sodium Silicate for Enhancing Flotation Selectivity of Sulphides Towards Grade and Recovery Improvements: Example from a Cu-Sulphide Ore L. Xia, B. Hart, V. Sidorkiewicz and D. Shaw	2901
Froth Pumping Using Warman® Centrifugal Slurry Froth Pumps	2915
A Fundamental Study of Disodium Carboxymethyl Trithiocarbonate (Orfom® D8) in Flotation Separation of Copper-Molybdenum Sulfides Simon Timbillah, Courtney Young and Avimanyu Das	2927
Author Index	2947
Subject Index	2955

Part I Pyrometallurgy Keynotes
