Preface *xvii*

Part I Bulk Marine Biomass – Industrial Applications and Potential as Primary Sources *1*

- 1 Microalgae: A Renewable Resource for Food and Fuels and More** *3*
Susan I. Blackburn and Kim Jye Lee-Chang
- 1.1 Introduction *4*
 - 1.2 Sourcing Microalgae: Algal Culture Collections *4*
 - 1.3 Microalgal Production Systems *7*
 - 1.3.1 Open Pond Cultivation *7*
 - 1.3.2 Plastic Bags and Tanks *8*
 - 1.3.3 Photobioreactors *8*
 - 1.3.4 Hybrid or Combination Growth Systems *9*
 - 1.3.5 Fermentation Systems *9*
 - 1.4 Uses of Microalgal Bioproducts *11*
 - 1.4.1 Food *11*
 - 1.4.2 Feeds *11*
 - 1.4.3 Biofuels *12*
 - 1.4.4 Neutral Lipids: Hydrocarbons *13*
 - 1.5 Chemotaxonomy: Setting the Stage for Selecting Biofuel Microalgae by Taxonomic Group *13*
 - 1.6 Manipulating Microalgal Lipid Composition with Culture Growth Phase and Conditions *14*
 - 1.7 High-Value Lipids: Long-Chain Polyunsaturated Fatty Acids *16*
 - 1.8 High-Value Lipids: Carotenoid Pigments *18*
 - 1.9 High-Value Bioproducts: Polysaccharides *20*
 - 1.10 Wastewater Bioremediation and Bioproducts *20*
 - 1.11 Other Bioapplications and the Potential for Bioengineering *21*
 - 1.12 Conclusions *22*

About the Authors	32

2 Commercial-Scale Production of Microalgae for Bioproducts 33

Michael Borowitzka

2.1	Introduction	33
2.2	Commercial-Scale Production Systems	34
2.3	Current Commercial Microalgae and Processes	39
2.3.1	Algae for Health Food (<i>Chlorella</i> and <i>Arthrospira</i>)	39
2.3.1.1	<i>Chlorella</i> Production	39
2.3.1.2	<i>Arthrospira</i> Production	40
2.3.2	Production of Carotenoids (β -Carotene and Astaxanthin)	43
2.3.2.1	β -Carotene Production Using <i>Dunaliella salina</i>	44
2.3.2.2	Astaxanthin Production Using <i>Haematococcus pluvialis</i>	46
2.3.3	Production of Long-Chain Polyunsaturated Fatty Acids	49
2.3.3.1	DHA Production Using <i>Cryptocodinium cohnii</i> and <i>Schizochytrium</i>	49
2.4	Potential New Products from Microalgae	50
2.4.1	Carotenoids	50
2.4.2	Sterols	53
2.4.3	Polyhydroxyalkanoates	53
2.4.4	Other Products	54
2.5	Regulations and Standards	54
2.6	Conclusion	55
	References	56
	About the Author	65

3 Ubiquitous Phlorotannins Prospects and Perspectives 67

Emeline Creis, Erwan Ar Gall, and Philippe Potin

3.1	Historical Background	67
3.2	Biosynthetic Routes and Chemistry	68
3.2.1	Biosynthetic Routes	69
3.2.2	Chemistry	72
3.3	Subcellular Localization	72
3.4	Extraction and Purification of Phlorotannins	73
3.4.1	Extraction of Soluble Phlorotannins	74
3.4.1.1	Extraction of Cell-Wall-Bound Phlorotannins and Treatment of Exuded Phenols	78
3.4.1.2	Purification	78
3.4.1.3	Polarity-Based Separation	79
3.4.1.4	High Pressure Liquid Chromatography	82
3.4.1.5	Molecular Size Discrimination	83
3.4.1.6	Preparative TLC	84
3.5	Identification Techniques	84

3.5.1	Thin Layer Chromatography	84
3.5.2	Fourier Transform InfraRed	85
3.5.3	Nuclear Magnetic Resonance	85
3.5.4	Mass Spectrometry	88
3.6	Quantification	89
3.7	Function of Phlorotannins in Brown Algae	90
3.8	Phlorotannins: Molecules of Interest in Pharmaceutical, Cosmeceutical, Agriculture Biotechnology, and Industrial Polymer Applications	93
3.9	Pharmacological Applications	93
3.9.1	Cosmeceutical Interest	95
3.9.1.1	Photoaging Prevention Activity	95
3.9.2	Other Biotechnological Applications	95
3.9.2.1	Food Preservation	95
3.9.2.2	Agriculture	95
3.9.2.3	Bioadhesives and Precursors of Eco-Friendly Resins	95
3.10	Conclusions and Prospects	96
	References	97
	About the Authors	115
4	The Potential of Microalgae for Biotechnology: A Focus on Carotenoids	117
	<i>Nicolas von Alvensleben and Kirsten Heimann</i>	
4.1	Introduction	117
4.2	Carotenoid Synthesis	118
4.3	Functions of Microalgal Carotenoids	120
4.3.1	Reactive Oxygen Species Scavenging by Carotenoids	121
4.3.1.1	Influences of Light Intensity on Microalgal Growth and Carotenoid Synthesis	122
4.3.1.2	Carotenogenesis Responses to Nutrient Limitation	124
4.3.1.3	Carotenogenesis Responses to Metal Ions: Mechanism of Action	124
4.4	Functional Benefits of Carotenoids as Nutraceuticals	126
4.4.1	Carotenes	126
4.4.2	Astaxanthin	127
4.4.3	Lutein and Zeaxanthin	130
4.4.4	Xanthophyll Cycle Pigments	130
4.5	Conclusion	131
	References	131
	About the Authors	142
5	Applications of Algal Biomass in Global Food and Feed Markets: From Traditional Usage to the Potential for Functional Products	143
	<i>Yannick Lerat, M. L. Cornish, and Alan T. Critchley</i>	
5.1	Introduction	143
5.2	Algal Products	144

5.2.1	Raw Biomass	144
5.2.2	Whole Algae	145
5.2.2.1	Protein	147
5.2.2.2	Lipids	149
5.2.3	Extracts and Other Molecules of Interest	151
5.2.3.1	Carotenoids	151
5.2.3.2	Polyphenols	155
5.2.3.3	Vitamins	156
5.2.3.4	Minerals	158
5.2.3.5	Iodine	159
5.2.3.6	Polysaccharides	160
5.2.3.7	Dietary Fibers	160
5.3	Applications	161
5.3.1	Animal Feeds	161
5.3.1.1	SWOT Analysis for Inclusion of Selected Algae and Algal Properties in Animal Feed	164
5.3.2	Human Food Applications	166
5.3.2.1	Potential Toxicity	167
5.3.2.2	Market Description	168
5.3.2.3	SWOT Analysis for the Inclusion of Algae in Human Food Applications	175
5.4	Conclusions	177

6 Phytoplankton Glycerolipids: Challenging but Promising Prospects from Biomedicine to Green Chemistry and Biofuels 191

Josselin Lupette and Eric Maréchal

6.1	Introduction	191
6.2	Fatty Acids, Membrane Glycerolipids, and Triacylglycerol in Phytoplankton	192
6.2.1	General Definition of Glycerolipids	192
6.2.2	Fatty Acids	192
6.2.2.1	Membrane Glycerolipids and Triacylglycerol	194
6.3	General Principles of Glycerolipid Biosynthesis in Photosynthetic Cells	202
6.3.1	In Primary Endosymbionts (Glaucophyta, Red Algae, and Green Algae)	202
6.3.1.1	The Stroma of Chloroplasts is the Cellular Factory of Fatty Acids	202
6.3.1.2	The Endoplasmic Reticulum is the Site of Fatty Acid Elongation	202
6.3.1.3	The Endoplasmic Reticulum Generates Membrane Glycerolipids and is the Site of Biosynthesis of Triacylglycerol	203
6.3.1.4	The Chloroplast Envelope is a Site of Synthesis of Glycerolipids, Including the Most Abundant Lipids of Thylakoids: Mono- and Digalactosyldiacylglycerol	204

- 6.3.1.5 Conversion of Galactolipids into Triacylglycerol 204
- 6.3.2 In Secondary Endosymbionts (Including Diatoms and Eustigmatophytes) 205
- 6.4 Algae-Based Fatty Acids: Technological Challenges and Promising Applications 205
- 6.5 Conclusions 207
 - Acknowledgments 209
 - List of Abbreviations 209
 - References 210
 - About the Authors 215

- 7 The Bioremediation Potential of Seaweeds: Recycling Nitrogen, Phosphorus, and Other Waste Products 217**
 - Nicolas Neveux, John J. Bolton, Annette Bruhn, David A. Roberts, and Monique Ras*
 - 7.1 Introduction 218
 - 7.2 Ulvaes in the Bioremediation of Excess Nutrients 220
 - 7.2.1 Bioremediation in Land-Based Systems with *Ulva* Cultivation 220
 - 7.2.2 Infrastructure for Land-Based Cultivation of *Ulva* 221
 - 7.2.3 *Ulva* Production Rates and Nutrient Uptake in Aquaculture 222
 - 7.2.4 A Fully Commercial Example: Abalone/*Ulva* Integrated Aquaculture in South Africa 223
 - 7.3 Kelps in the Bioremediation of Excess Nutrients 224
 - 7.3.1 Bioremediation in Coastal Waters with Kelp Cultivation 224
 - 7.3.2 Kelps as Nutrient Scrubbers: Nutrient Remediation Capacity 224
 - 7.3.3 Kelps as Non-Fed Nutrient Extractive Crops in Integrated Multitrophic Aquaculture 225
 - 7.3.4 Kelps for Biomitigation of Coastal Eutrophication 226
 - 7.3.5 Challenges and Future Perspectives 226
 - 7.4 Bioremediation of Dissolved Metals with Seaweeds 227
 - 7.4.1 Biosorption of Dissolved Metals with Seaweed Biomass 227
 - 7.4.1.1 Barriers to Implementing Biosorption 228
 - 7.4.2 Bioaccumulation of Metals through Cultivation of Live Seaweed Biomass 229
 - 7.4.3 Challenges and Future Perspectives 230
 - Acknowledgments 230
 - References 230
 - About the Authors 237

- 8 Cultivation and Conversion of Tropical Red Seaweed into Food and Feed Ingredients, Agricultural Biostimulants, Renewable Chemicals, and Biofuel 241**
 - Shrikumar Suryanarayan, Iain C. Neish, Sailaja Nori, and Nelson Vadassery*
 - 8.1 Cultivation 241
 - 8.1.1 Current Biomass Production and Uses 241

8.1.2	Farm Success Factors	243
8.1.3	Developing Innovations in Tropical Marine Agronomy	245
8.2	MUZE Processing	246
8.3	MUZE Products from Red Seaweed	247
8.3.1	Sea Vegetables as Human Food	247
8.3.2	Seaweed Concentrates (SWC) for Agriculture	248
8.3.2.1	SWC Animal Feed Components	254
8.3.2.2	SWC Biostimulants for Plants	255
8.3.3	Renewable Chemicals	257
8.3.3.1	Carrageenan Conversion to Biodegradable Films	257
8.3.3.2	Carrageenan Conversion to Superabsorbent Hydrogels	257
8.3.4	Biofuels	257
8.3.4.1	Biofuels from Fermentation	258
8.3.4.2	Biofuels from Hydrothermal Liquefaction	258
	References	259
	About the Authors	263

Part II Marine Molecules for Disease Treatment/Prevention and for Biological Research 265

9	Use of Marine Compounds to Treat Ischemic Diseases	267
	<i>Catherine Boisson-Vidal</i>	
9.1	History of Natural Marine Products	268
9.2	Peripheral Arterial Disease and Cardiovascular Risks: Treatments and Unmet Needs	274
9.2.1	Prevention of Disease Progression	274
9.2.2	Anticoagulation	275
9.2.3	Surgical Revascularization	275
9.2.4	Novel Therapies: Therapeutic Angiogenesis	276
9.2.4.1	Cell Therapy	276
9.2.4.2	How Do New Blood Vessels Form?	276
9.3	Chemistry	278
9.3.1	Extraction and Preparation of Low Molecular Weight Fucoidan Fractions	278
9.3.2	Structural Determination	279
9.4	Biological Properties	279
9.4.1	Marine Polysaccharides Exhibit Anticoagulant Activity	279
9.4.1.1	Principle of Anticoagulation	280
9.4.1.2	Marine Polysaccharides Have Potent Anticoagulant Properties	280
9.4.1.3	Fucoidan Exhibits Venous and Arterial Antithrombotic Properties with No Hemorrhagic Risk	280
9.4.2	Marine Polysaccharides Have Angiogenic Properties	280
9.4.2.1	Contrary to Other Polysaccharides, Fucoidan Potentiates Angiogenesis <i>In Vitro</i> and <i>In Vivo</i>	281

- 9.4.2.2 Injections of LMW Fucoidan Induce Rapid Mobilization of Stem Cells from Bone Marrow 284
- 9.4.3 What is the Fucoidan Mechanism of Action? 284
- 9.4.3.1 Cellular and Molecular Mechanisms Underlying Fucoidan Proangiogenic Activity 284
- 9.4.3.2 Fucoidan Modulates the Biological Activity of Angiogenic Heparin Binding Proteins 285
- 9.4.3.3 Fucoidan May Act as a Direct Growth Factor Signal Transducer 285
- 9.4.4 How Does Fucoidan Act *In Vivo*? 286
- 9.5 Conclusion 288
- References 288
- About the Author 296

- 10 Bioinspiration from Marine Scaffolds 297**
Stephan Böttcher, Angela Di Capua, John W. Blunt, and Ronald J. Quinn
- 10.1 History of Marine Natural Products 297
- 10.2 Chemical Space 301
- 10.2.1 Scaffold Trees 303
- 10.2.2 Scaffold Networks 303
- 10.3 Self-Organizing Maps: Chemical Diversity of Marine NPs versus Plant NPs 311
- 10.4 Conclusion 317
- References 317
- About the Authors 320

- 11 Guanidinium Toxins: Natural Biogenic Origin, Chemistry, Biosynthesis, and Biotechnological Applications 323**
Lorena M. Durán-Riveroll, Allan D. Cembella, and José Correa-Basurto
- 11.1 General Introduction to Guanidinium Toxins 324
- 11.1.1 Historical Background of Tetrodotoxin 325
- 11.1.2 Historical Background of Saxitoxin 326
- 11.2 Biogenic Source and Vector Organisms 328
- 11.2.1 Tetrodotoxin and Analogs 328
- 11.2.2 Saxitoxin and Analogs 330
- 11.3 Chemistry of Guanidinium Toxins 332
- 11.3.1 Physical and Chemical Properties of Guanidinium Toxins 333
- 11.3.2 Identification and Quantification Methods 335
- 11.3.2.1 Chemical Methods for Saxitoxin and Its Analogs 335
- 11.3.2.2 Chemical Methods for Tetrodotoxin and Its Analogs 337
- 11.3.2.3 Structural and Functional Assays 338
- 11.3.2.4 Receptor Binding Assays 338
- 11.3.2.5 Immunodiagnostic Assays 339
- 11.4 Synthesis 340
- 11.4.1 Chemical Synthesis 340

11.4.1.1	Tetrodotoxin	340
11.4.1.2	Saxitoxin	340
11.4.2	Biosynthetic pathways	341
11.4.2.1	Biosynthesis of Tetrodotoxin	341
11.4.2.2	Biosynthesis of Saxitoxin	342
11.4.3	Genetic Regulation of Guanidinium Toxins	345
11.5	Mode of Action and Symptomology	348
11.5.1	Bioinformatic Tools for Guanidinium Toxins	350
11.5.1.1	Molecular Docking	350
11.5.1.2	Molecular Dynamics	352
11.5.1.3	Quantitative Structure–Activity Relationship	353
11.6	Existing and Potential Medical and Biotechnological Research Applications	354
11.6.1	Guanidinium Toxins as Research Tools for Membrane Proteins	354
11.6.2	Pain Control and Muscle Relaxation	355
11.6.3	Other Medical Uses	356
11.7	Conclusions	356
11.8	Future Perspectives	357

Preface xv

- 15 Marine Polysaccharides and Their Importance for Human Health 485**
Paola Laurienzo
- 15.1 General Properties of Polysaccharides 485
- 15.1.1 Classification of Polysaccharides 486
- 15.1.2 Sources of Marine Polysaccharides 486
- 15.1.2.1 Polysaccharides from Macroalgae 487
- 15.1.2.2 Polysaccharides from Microalgae 487
- 15.1.2.3 Polysaccharides from Marine Animals 489
- 15.1.3 Methods of Extraction and Purification 489

15.1.4	Chemical Modification of Polysaccharides	489
15.1.4.1	Copolymerization	490
15.1.5	Polysaccharides as Hydrogels	491
15.2	Marine Polysaccharides from Macroalgae	495

Preface

Scientific editors: Stéphane La Barre and Stephen S. Bates

Commercial editor: Wiley VCH, Weinheim, Germany

The initiative by STÉPHANE LA BARRE and STEPHEN S. BATES to edit a volume on the prospects of “Blue Biotechnology: Production and Use of Marine Molecules” is remarkably timely, as the Earth is facing major challenges with global changes and increased human impacts. Indeed, blue biotechnology is a key approach for a sustainable ocean future. The unexplored and understudied nature of much of the underwater world means that the capacity of marine organisms, other than fish and shellfish, to provide inputs to the blue economy is only just beginning to be appreciated. This is partly through the development of new gene sequencing technologies for cultivable and uncultivable organisms, bio-inspired chemistry, genetic engineering, and sustainable aquaculture.

There have already been successes. The antiviral drugs Zovirax™ and Acyclovir™ were obtained from nucleosides isolated from Caribbean sponges. Yondelis™, developed from small soft-bodied marine tunicates, was the first drug of marine origin to fight cancer. Exploration of the ocean’s biodiversity is now helping us understand, for example, how organisms that can withstand extremes of temperature and pressure and grow without light could be used to develop new industrial enzymes or pharmaceuticals, as well as novel biomaterials. At the same time, concerns about the limitation of terrestrial crops are driving efforts to explore the use of algae as a source of high value-added chemicals and bioactive compounds.

Accelerating this process will require a combination of basic research on ocean life and applied research on possible industrial applications with low probabilities but high rewards for success. Companies that have historically never considered marine biotechnology to impact their business are now starting to claim it or to use it to their benefit. To a large extent, this is driven by the quest for sustainability: to synthesize our daily life products from renewable resources by means of smart and eco-efficient processes. Increasingly, major and small industries have begun to take part in the growing marine bio-economy. They are shifting their raw material basis and production routes from fisheries or mining sources to renewable cultivated materials and by-products optimization using a biorefinery concept and biosynthetic chemistry. In addition, blue biotechnology is providing cues to prevent the loss of essential ecosystem services.
