# **Advances in Geographical and Environmental Sciences**

**Series Editor**

R. B. Singh, University of Delhi, Delhi, India

Advances in Geographical and Environmental Sciences synthesizes series diagnosis and prognostication of earth environment, incorporating challenging interactive areas within ecological envelope of geosphere, biosphere, hydrosphere, atmosphere and cryosphere. It deals with land use land cover change (LUCC), urbanization, energy flux, land-ocean fluxes, climate, food security, ecohydrology, biodiversity, natural hazards and disasters, human health and their mutual interaction and feedback mechanism in order to contribute towards sustainable future. The geosciences methods range from traditional field techniques and conventional data collection, use of remote sensing and geographical information system, computer aided technique to advance geostatistical and dynamic modeling.

The series integrate past, present and future of geospheric attributes incorporating biophysical and human dimensions in spatio-temporal perspectives. The geosciences, encompassing land-ocean-atmosphere interaction is considered as a vital component in the context of environmental issues, especially in observation and prediction of air and water pollution, global warming and urban heat islands. It is important to communicate the advances in geosciences to increase resilience of society through capacity building for mitigating the impact of natural hazards and disasters. Sustainability of human society depends strongly on the earth environment, and thus the development of geosciences is critical for a better understanding of our living environment, and its sustainable development.

Geoscience also has the responsibility to not confine itself to addressing current problems but it is also developing a framework to address future issues. In order to build a 'Future Earth Model' for understanding and predicting the functioning of the whole climatic system, collaboration of experts in the traditional earth disciplines as well as in ecology, information technology, instrumentation and complex system is essential, through initiatives from human geoscientists. Thus human geoscience is emerging as key policy science for contributing towards sustainability/survival science together with future earth initiative.

Advances in Geographical and Environmental Sciences series publishes books that contain novel approaches in tackling issues of human geoscience in its broadest sense – books in the series should focus on true progress in a particular area or region. The series includes monographs and edited volumes without any limitations in the page numbers.

My Beloved Parents & Family*

# Acknowledgements

This book is based on a research conducted on environmental pollution. I am grateful for a number of friends and colleagues for encouraging me to start the work, persevere with it, and finally publish it. It is a pleasure to thank many people who made this book possible. I am grateful for all the support I have received whilst researching and writing this book.

I would like to express my deep gratitude to my supervisor, Dr. Andrew Turner, under whose supervision I chose this topic and began this research. I would also like to thank him for his dedicated scientific guidance, consistent support, and encouragement throughout the duration of my research.

I dedicate my book to my beloved mother, father, and husband for all kinds of support, understanding, patience, and encouraging me to publish the book. I would also like to thank my daughter Nyra for her constant source of love, affection, and strength and encouragement during the preparation of the book.

Thank You!

# Contents

<b>1</b>	<b>Introduction</b> .....	1
1.1	Metals .....	1
1.2	Sediment .....	2
1.3	Sources of Sediment Contaminants .....	3
1.4	Sediment Contaminants .....	4
	References .....	8
<b>2</b>	<b>Bioavailability of Metals in Sediment</b> .....	9
2.1	Introduction-Bioavailability .....	9
	References .....	11
<b>3</b>	<b>Solubilization of Metals in Invertebrate Guts</b> .....	13
3.1	Introduction .....	13
	References .....	15
<b>4</b>	<b>Surfactants</b> .....	17
4.1	Introduction .....	17
4.2	Types of Surfactants .....	18
4.3	Properties of Surfactants .....	18
4.4	Surfactants as Remediating Agents .....	19
4.5	Methods of Heavy Metal Extraction from Solids by Surface Active Agents .....	20
	References .....	22
<b>5</b>	<b>Commercial Surfactants for Remediation-Introduction</b> .....	25
5.1	Introduction .....	25
5.2	Sodium Dodecyl Sulfate (SDS) .....	26
5.3	Hexadecyltrimethylammonium .....	27
5.4	Triton X-100 .....	27
5.5	Sodium Taurocholate .....	27
	References .....	29

<b>6</b>	<b>Commercial Surfactants for Remediation-Methodology</b> .....	31
6.1	Sampling .....	31
6.2	Sample Processing .....	33
6.3	Sample Digestion .....	33
6.4	Reagents and Working Surfactants .....	34
6.5	Experiments .....	37
	References .....	38
<b>7</b>	<b>Metal Analysis</b> .....	39
7.1	Introduction .....	39
7.2	Inductively Coupled Plasma Mass Spectrometry (ICP-MS) .....	40
7.3	Inductively Coupled Plasma Optical Emission Spectroscopy (ICP-OES) .....	40
7.4	Metal Analysis .....	40
7.5	CHN Analysis .....	42
7.6	Data Presentation .....	43
	References .....	44
<b>8</b>	<b>Metal Concentration</b> .....	45
8.1	Sample Composition .....	45
8.2	Carbon, Nitrogen, and Hydrogen .....	46
	Reference .....	46
<b>9</b>	<b>Kinetics of Metal Release by Surfactants</b> .....	47
9.1	Introduction .....	47
9.2	Kinetics of Metal Release by HDTMA Surfactant .....	53
9.3	Kinetics of Metal Release by SDS Surfactant .....	54
9.4	Kinetics of Metal Release by Triton X 100 Surfactant .....	55
9.5	Kinetics of Metal Release by NaTC Surfactant .....	55
9.6	Kinetics of Metal Release by Synthesized Surfactant .....	56
	References .....	57
<b>10</b>	<b>Surfactant Availability of Metals</b> .....	59
10.1	Introduction .....	59
10.2	Surfactant Availability of Metals by HDTMA .....	61
10.3	Surfactant Availability of Metals by SDS .....	61
10.4	Surfactant Availability of Metals by Triton X 100 .....	62
10.5	Surfactant Availability of Metals by NaTC .....	62
10.6	Relationship Between the Metals Available by Different Surfactants .....	62
10.7	Comparison Between SDS and NaTC .....	62

10.8	Mechanisms of Metal Release by Surfactants . . . . .	64
10.9	Comparison Between the Metals Release by Proteinase K, BSA, NaTC and SDS . . . . .	66
10.10	Relationship Between the Metals Available by BSA, SDS, and NaTC. . . . .	67
	References . . . . .	68
<b>11</b>	<b>Implication of Surfactants in Remediation . . . . .</b>	<b>69</b>
11.1	Introduction . . . . .	69
11.2	Implications for Metal Availability to Deposit-Feeders . . . . .	70
	References . . . . .	71
<b>12</b>	<b>General Discussion and Conclusions . . . . .</b>	<b>73</b>
12.1	Introduction . . . . .	73

## About the Author

**Anu Singh Bisht** is a dedicated and focused researcher with more than 7 years of extensive research experience in the areas of nanoscience, optics and microscopy, environmental science, and microbiology.

She has a Ph.D. in physics from the prestigious French Institute École Normale Supérieure de Cachan (ENS de Cachan). She completed her master's in Erasmus Mundus Joint European Water and Coastal Management from Spain and the United Kingdom. She received a bachelor's in microbiology from the University of Delhi, India. Most recently, she worked as a post-doctoral research fellow at the University of Technology of Troyes, France. She led research work on the development of new light-emitting hybrid nanosources for their application in telecommunication.

She is a productive independent researcher with excellent credentials in designing research experiments; she operates specialized scientific equipment and conducts data collection, interpretation, result processing, and analysis. Her experience in scientific publication consists of more than 22 contributions to high impact factor journals and two book chapters. She has participated in several national and international conferences to present her research work and has also taken part in summer schools in France, where she presented her work. She received several awards and fellowships. These include a post-doctoral research fellowship from the Agence Nationale de la Recherche (ANR), France; a scholarship for her Ph.D. from the Centre National de la Recherche Scientifique (CNRS) Délégation Ile-de-France Est; an international scholarship for internship from the École Normale Supérieure (ENS) de Cachan; and an Erasmus Mundus Scholarship for a Joint European Master in Water and Coastal Management from the European Union.
