Advances in Intelligent Systems and Computing

Volume 901

Series editor

Janusz Kacprzyk, Systems Research Institute, Polish Academy of Sciences,
Warsaw, Poland

e-mail: kacprzyk@ibspan.waw.pl

The series “Advances in Intelligent Systems and Computing” contains publications on theory, applications, and design methods of Intelligent Systems and Intelligent Computing. Virtually all disciplines such as engineering, natural sciences, computer and information science, ICT, economics, business, e-commerce, environment, healthcare, life science are covered. The list of topics spans all the areas of modern intelligent systems and computing such as: computational intelligence, soft computing including neural networks, fuzzy systems, evolutionary computing and the fusion of these paradigms, social intelligence, ambient intelligence, computational neuroscience, artificial life, virtual worlds and society, cognitive science and systems, Perception and Vision, DNA and immune based systems, self-organizing and adaptive systems, e-Learning and teaching, human-centered and human-centric computing, recommender systems, intelligent control, robotics and mechatronics including human-machine teaming, knowledge-based paradigms, learning paradigms, machine ethics, intelligent data analysis, knowledge management, intelligent agents, intelligent decision making and support, intelligent network security, trust management, interactive entertainment, Web intelligence and multimedia.

The publications within “Advances in Intelligent Systems and Computing” are primarily proceedings of important conferences, symposia and congresses. They cover significant recent developments in the field, both of a foundational and applicable character. An important characteristic feature of the series is the short publication time and world-wide distribution. This permits a rapid and broad dissemination of research results.

CITAMA 2019—Preface

Agronomy and environment represent a key element in the present-day society. These areas have great importance in Latin American countries, technological innovations in these areas representing a key strategy. Particularly, the application of ICTs to agronomy and environment is a current need and there are new and exciting innovations in this field, this issue becoming one of the most advanced sectors of digital technologies.

The 2nd International Conference on ICTs in Agronomy and Environment (CITAMA 2019) was held during January 22–25, 2019, in Guayaquil, Ecuador. The CITAMA series of conferences try to become an international framework and meeting point for professionals who are particularly devoted to research, development, and innovation, within the field of the application of ICTs to agronomy, the environment, and related areas. CITAMA 2019 was conceived as a knowledge exchange conference consisting of several plenary talks and contributions about current innovative technology. These proposals deal with the most important aspects and future prospects from an academic, innovative, and scientific perspective, within the field of applied ICTs in agronomy and environment. It aims to provide a platform for researchers to share their original work and practical development experiences.

We would like to express our gratitude to all the authors who submitted papers to CITAMA 2019, and our congratulations to those whose papers were accepted. There were 27 submissions this year. Each submission was reviewed by at least three Program Committee (PC) members. Only the papers with an average score of 1.0 were considered for final inclusion, and almost all accepted papers had positive reviews or at least one review with a score of 2 (accept) or higher. Finally, the PC decided to accept 14 full papers. We would also like to thank the Program Committee members, who agreed to review the manuscripts in a timely manner and provided valuable feedback to the authors.
