Carbon Energy
System

Springer

SpringerBriefs in Energy

SpringerBriefs in Energy presents concise summaries of cutting-edge research and practical applications in all aspects of Energy. Featuring compact volumes of 50 to 125 pages, the series covers a range of content from professional to academic. Typical topics might include:

- A snapshot of a hot or emerging topic
- A contextual literature review
- A timely report of state-of-the art analytical techniques
- An in-depth case study
- A presentation of core concepts that students must understand in order to make independent contributions.

Briefs allow authors to present their ideas and readers to absorb them with minimal time investment.

Briefs will be published as part of Springer's eBook collection, with millions of users worldwide. In addition, Briefs will be available for individual print and electronic purchase. Briefs are characterized by fast, global electronic dissemination, standard publishing contracts, easy-to-use manuscript preparation and formatting guidelines, and expedited production schedules. We aim for publication 8–12 weeks after acceptance.

Both solicited and unsolicited manuscripts are considered for publication in this series. Briefs can also arise from the scale up of a planned chapter. Instead of simply contributing to an edited volume, the author gets an authored book with the space necessary to provide more data, fundamentals and background on the subject, methodology, future outlook, etc.

SpringerBriefs in Energy contains a distinct subseries focusing on Energy Analysis and edited by Charles Hall, State University of New York. Books for this subseries will emphasize quantitative accounting of energy use and availability, including the potential and limitations of new technologies in terms of energy returned on energy invested.

Acknowledgements

The authors would like to acknowledge Mr. Lahiru Jayasuriya (Cardiff University) for contributing to preparing Chap. 2 and Mr. Oliver Lancaster (Wales and West Utilities) for providing Fig. 4.3.

Contents

1	Overview of the Transition to a Low Carbon Energy System	1
1.1	Changes in the Gas Sector	1
1.2	Decarbonisation of the Power System	2
1.3	Decarbonisation of the Heat Sector	3
	References	4
2	Fundamentals of Natural Gas Networks	5
2.1	Natural Gas	5
2.2	Natural Gas Flow in Pipes	6
2.3	Gas Networks and Pressure Management	9
2.3.1	Gas Terminals	10
2.3.2	Gas Transmission Systems	10
2.3.3	Gas Distribution	11
2.4	Components of Gas Networks	11
2.4.1	Gas Compressors	11
2.4.2	Gas Storage	13
2.4.3	Pressure Regulators	15
2.4.4	Other Valve Types	18
2.5	Gas Demand	18
2.5.1	Methods to Define Gas Demand	20
2.6	Operation and Control of Gas Networks	21
	References	22
3	The Operation of Gas Networks in the Presence of a Large Capacity of Wind Generation	23
3.1	Case Study: GB Gas and Electricity Systems	23
3.1.1	The Electricity System in GB	23
3.1.2	The Gas Transmission System in GB	25

3.2	Impacts of Variable Wind Generation on the Operation of Gas Networks	28
3.2.1	Wind Generation Variability	28
3.2.2	Impacts of Wind Generation on the Net Electricity Demand	29
3.2.3	Gas Demand for Power Generation	32
3.3	Gas Networks as Flexibility Provider	32
3.3.1	Linepack	33
3.3.2	Gas Storage	34
3.3.3	Gas Compressors	34
	References	36
4	Impacts of Heat Decarbonisation on Gas Networks	37
4.1	Heat Supply in GB	37
4.2	Heat Supply Options	38
4.2.1	Heating Technologies	38
4.2.2	Hybrid Heat Pump	40
4.3	Impacts of Heat Decarbonisation on Gas Networks	41
4.3.1	An Integrated Approach for Analysing Whole System Impacts of Heat Decarbonisation	41
4.3.2	Impacts of the Heat Pathways on Electricity Demand	42
4.3.3	Impacts of the Heat Pathways on Gas Demand	44
4.4	Impacts of Heat Decarbonisation on Gas Supply Options	46
	References	46
5	The Future of Gas Networks	49
5.1	The Evolution of Gas Supply in the UK	49
5.1.1	Gas Works	49
5.1.2	Discovery and Conversion to Natural Gas	51
5.1.3	Liquefied Natural Gas (LNG)	51
5.2	Unconventional Natural Gas	52
5.2.1	Shale Gas	53
5.2.2	Tight Gas	54
5.2.3	Coal Bed Methane	54
5.3	Low Carbon Substitutes for Natural Gas (Green Gas)	55
5.3.1	Biogas	55
5.3.2	Bio-Synthetic Natural Gas	57
5.3.3	Hydrogen	60
5.4	Challenges to Injecting Alternative Gases into the National Gas Grid	64
	References	68
	Glossary	69
