China's Macroeconomic Outlook

Quarterly Forecast and Analysis Report,
February 2019

 Springer

Current Chinese Economic Report Series

The Current Chinese Economic Reports series provides insights into the economic development of one of the largest and fastest growing economies in the world; though widely discussed internationally, many facets of its current development remain unknown to the English speaking world. All reports contain new data, which was previously unknown or unavailable outside of China. The series covers regional development, industry reports, as well as special topics like environmental or demographical issues.

Preface

This report is a partial result of the China's Quarterly Macroeconomic Model (CQMM), a project developed and maintained by the Center for Macroeconomic Research (CMR) at Xiamen University. The CMR, one of the key research institutes of Humanities and Social Sciences sponsored by the Ministry of Education of China, has been focusing on China's economic forecast and macroeconomic policy analysis, and it has started to develop the CQMM for purpose of short-term forecasting, policy analysis, and simulation since 2005.

Based on the CQMM, the CMR and its partners hold press conferences to release forecasts for China's major macroeconomic variables. Since July, 2006, twenty-six quarterly reports on China's macroeconomic outlook have been presented and thirteen annual reports have been published.

This report, the twenty-sixth quarterly report, has been presented at the Forum on China's Macroeconomic Outlook and Press Conference of CQMM on February 26, 2019. This conference was jointly held at Beijing, China, by Center for Macroeconomic Research at Xiamen University and Economic Information Daily of Xinhua News Agency.
