Editor Biographies *xxiii*

List of Contributors *xxvii*

Preface *xxxiii*

Part I Fundamentals and Framework *1*

- 1 Introduction to Sustainability and Sustainable Development** *3*
*Prangya R. Rout, Akshaya K. Verma, Puspendu Bhunia, Rao Y. Surampalli,
 Tian C. Zhang, R.D. Tyagi, S.K. Brar, and M.K. Goyal*
- 1.1 Background and Definition *3*
- 1.2 Basic Concepts and Issues *4*
- 1.3 Evolution of Sustainability and Sustainable Development *7*
- 1.4 Challenges and Solutions *8*
- 1.5 Adaptation and Resilience *8*
- 1.6 Economic, Ecological, Social, Technological and Systems Perspectives *13*
- 1.6.1 Economic Aspect *13*
- 1.6.2 Ecological Aspect *13*
- 1.6.3 Social Aspect *13*
- 1.6.4 Technological Aspect *14*
- 1.6.5 Systems Aspect *14*
- 1.6.6 Integrated Aspect *14*
- 1.7 Conclusions *16*
- References *17*
- 2 The Need, Role and Significance of Sustainability** *21*
Anita Talan, A.N. Pathak, and R.D. Tyagi
- 2.1 Introduction *21*
- 2.2 Three Pillars of Sustainability *21*
- 2.2.1 Economic Development *23*
- 2.2.2 Social Development *24*
- 2.2.3 Environmental Protection *25*
- 2.3 Primary Goals of Sustainability *27*

2.3.1	Growth Revival	28
2.3.2	Quality of Growth	29
2.3.3	Essential Needs for Basic Necessities	30
2.3.4	Population Sustainability	30
2.3.5	Conservation and Enhancement of Resources	31
2.3.6	Sustainability of Science and Technology	32
2.3.7	Merging Economics with Environment	34
2.4	Significance of Sustainability	34
2.5	Challenges Toward Sustainability	35
2.5.1	Closing/Bridging Development Gap	36
2.5.2	Forward Steps for the Global World	36
2.5.3	Sustainable Toolkit for Companies	37
2.6	Sustainable Future	39
2.7	Conclusions	39
	References	40
3	Sustainable Development: Dimensions, Intersections and Knowledge Platform	43
	<i>Pritee Sharma and Kanak Singh</i>	
3.1	Introduction	43
3.2	Understanding Complex Systems	44
3.2.1	The Limits to Growth	45
3.2.2	Global Consumption	46
3.2.3	Population and Environment: The IPAT Equation	46
3.2.4	Notions of Strong and Weak Sustainability	47
3.3	Dimensions of Sustainable Development: Economic Dimension	47
3.3.1	Neoclassical Thought	48
3.3.2	Green Economics	50
3.3.3	Resource Efficiency and Policy Pathways	52
3.4	Dimensions of Sustainable Development: Environmental Dimension	53
3.4.1	Ecosystems and Ecosystem Services	53
3.4.2	Mapping of Ecosystem Services	54
3.4.3	Ecosystem Services Assessment Frameworks and Tools	55
3.4.4	Challenges in Biodiversity and Ecosystem Services	56
3.5	Dimensions of Sustainable Development: Social Dimension	56
3.6	Mapping Social Development Through Sustainable Development Goals (SDGs)	58
3.6.1	Policy Imperatives for “Leaving No One Behind”: Social Inclusion	58
3.6.2	Barriers to Social Inclusion and Gender Equality	59
3.7	Sustainable Development Indicators	60
3.8	Exploring Knowledge Systems for Sustainability	61
3.8.1	Multiple Evidence-Based Approach for Creation of Knowledge Systems	63
3.8.2	Knowledge Systems for Sustainability in Future Scenarios	64
3.9	Conclusion	65
	References	65

4	Measurement of Sustainability	69
	<i>Rajneesh Singh, Akash Kumar Gupta, Puspendu Bhunia, Rao Y. Surampalli, Tian C. Zhang, Pengzhi Lin, and Yu Chen</i>	
4.1	Introduction	69
4.2	Types and Choice of Indicators	70
4.3	Framework of Lifecycle-Based Sustainability Metrics	72
4.4	Technological Aspects of Supply Chain and Process Sustainability	73
4.5	Sustainable Economy Indices	74
4.5.1	Index of Sustainable Economic Welfare	74
4.5.2	Genuine Progress Indicator (GPI)	75
4.6	Environmental Indicator for Manufacturing Competitiveness	75
4.6.1	Environmental Stewardship Indicators	76
4.6.2	Economic Growth Indicators	76
4.6.3	Social Wellbeing Indicators	76
4.6.4	Technological Advancement Indicators	76
4.6.5	Performance Management Indicators	76
4.7	Monitoring and Evaluation Processes	77
4.7.1	Assessment of Readiness	77
4.7.2	Agreeing on Outcomes to Monitor and Evaluate	77
4.7.3	Selecting Key Performance Indicators to Monitor Outcomes	77
4.7.4	Baseline Data on Indicators – Where Are We Today?	78
4.7.5	Planning for Improvement – Selecting Results Targets	78
4.7.6	Monitoring for Results	78
4.7.7	The Role of Evaluations	78
4.7.8	Reporting Findings	78
4.7.9	Using Findings	79
4.7.10	Sustaining the Monitoring and Evaluation System Within the Organization	79
4.8	Conclusion	79
	References	79
5	Sustainable Impact Assessment	83
	<i>L.R. Kumar, Anita Talan and R.D. Tyagi</i>	
5.1	Introduction	83
5.2	Types of Impact Assessment (IA)	83
5.2.1	Environment Impact Assessment (EIA)	83
5.2.2	Strategic Environment Assessment (SEA)	84
5.2.3	Health Impact Assessment (HIA)	86
5.2.4	Risk Assessment (RA)	86
5.3	Sustainable Impact Assessment (SIA)	86
5.4	Advantages of Conducting Sustainable Impact Assessment	89
5.5	Recent Evolution of Impact Assessment	90
5.5.1	Integration of Different Impact Assessments for Meaningful Remarks and Conclusions	91
5.6	Different Approaches of SIA	91
5.6.1	EIA-Driven Integrated Assessment	91

5.6.2	Objectives-Led Integrated Assessment	92
5.6.3	New Conception of Sustainability Assessment	92
5.7	Determining Criteria for Sustainability	93
5.8	Procedure to Follow Impact Assessment	94
5.8.1	Statement of Objective	95
5.8.2	Possibilities for Achieving Objectives	96
5.8.3	Proposed Actions and Alternatives	96
5.8.4	Environmental Characterization Report	97
5.8.5	Identification of Impact and Analysis of Magnitude and Importance of Impact	97
5.8.6	Assessment of Impact	98
5.8.7	Different Methodologies for Sustainable Impact Assessment	98
5.9	ToSIA – Software Tool for Sustainable Impact Assessment	99
5.9.1	Modeling Forest Wood Chains	99
5.9.2	Material Flow Calculations	100
5.9.3	Sustainability Indicator Calculations	100
5.9.4	Other Tools for Evaluating Sustainability	102
5.10	Case Studies for Use of Sustainable Impact Assessment	103
5.10.1	Sustainable Impact Assessment in International Trade Negotiations	103
5.10.2	Watershed Program Case Study	104
5.11	Conclusions	106
	References	107

6 Analytical Tools and Methodologies to Evaluate Sustainable Development Goals of the United Nations with Special Reference to Asia 111

Gamini Herath

6.1	Introduction	111
6.2	Sustainable Development Goals of the United Nations	112
6.3	Planning and Decision Making Methodologies for the Sustainable Development Goals	112
6.4	Tools to Tackle Interlinked Goals and Policy Incoherence	113
6.4.1	Network Mapping Technique	113
6.4.2	The Nexus Approach	114
6.4.3	Scoring Approaches	114
6.4.4	Stakeholders Forum Classification of Type and Nature of Sustainable Development Goal Interlinkages	115
6.4.5	Integrated Sustainable Development Goals (iSDGs) Planning Model	116
6.5	Carrying Capacity (CC)	116
6.5.1	Social Carrying Capacity (SCC)	116
6.5.2	Limits of Acceptable Change (LAC)	117
6.6	Evaluation Models Under Uncertainty	117
6.6.1	The Precautionary Principle (PP)	117
6.7	Adaptive Management	119
6.8	Multicriteria Decision Analysis (MCDA)	119

6.8.1	The Analytic Hierarchy Process	119
6.9	Multiattribute Utility Theory	121
6.9.1	Applications of MAUT	121
6.9.2	Multicriteria Decision Analysis and Valuation of Natural Resources	122
6.9.3	Integrating Environmental Values with the Analytic Hierarchy Process	123
6.9.4	Combined Models of Multicriteria Decision Analysis and Geographic Information System	123
6.10	Conclusions	124
	References	124
7	Resilience Engineering and Quantification for Sustainable Systems	129
	<i>Anita Talan, Bhoomika Yadav, L.R. Kumar, and R.D. Tyagi</i>	129
7.1	Introduction	129
7.2	Resilience and Sustainability: Definitions, Differences and Similarities	130
7.2.1	Definitions	130
7.2.2	Differences Between Sustainability and Resilience	131
7.2.3	Similarities and Association Between Sustainability and Resilience	131
7.3	Technical Purposes of Resilience Engineering	132
7.4	Resilience Assessment Approaches	133
7.4.1	Qualitative Assessment	134
7.4.1.1	Intangible Bases	134
7.4.1.2	Barriers	135
7.4.1.3	Semi-quantitative Indices	136
7.4.2	Quantitative Assessment	136
7.4.2.1	Structure-Based Models	136
7.4.2.2	General Measures	138
7.5	Indicators for Quantifying Successful Resilience and Sustainability	138
7.6	Some Resilient Systems and Associated Codes/Standards	140
7.6.1	Infrastructures and Building Systems	142
7.6.2	Transportation Systems	142
7.6.3	Electrical Systems	143
7.6.4	Water and Wastewater Systems	143
7.6.5	Communication Systems	144
7.7	Communal Resilience and Built Environment Sustainability	144
7.7.1	Characteristics/Elements of Community Resilience	145
7.7.2	Community Resilience as a Strategy for Disaster Readiness	147
7.7.3	Integrating Communal Resilience and Environmental Sustainability	148
7.8	Risk Analysis and Resilience	149
7.9	Integration of Sustainability and Resilience	151
7.9.1	Resilience as Part of Sustainability	151
7.9.2	Sustainability as Part of Resilience	151
7.10	Conclusions	152
	References	154

Part II	Dimensions and Different Aspects	157
8	Economic Development and Sustainability	159
	<i>L.R. Kumar, Anita Talan, and R.D. Tyagi</i>	
8.1	Introduction	159
8.2	Different Perspectives of Economic Development	159
8.2.1	Micro-perspective	159
8.2.2	Macro-Perspective	160
8.3	Indicators for Economic Development	160
8.3.1	National Output and Per Capita Income	160
8.3.2	Unemployment	161
8.3.3	Inflation and Deflation	161
8.3.4	Gross Value Added (GVA) and Local Value Added (LVA)	162
8.4	Economic Development for Sustainability	162
8.4.1	Elements of Economic Sustainable Development	162
8.4.1.1	Environmental Economics	162
8.4.1.2	Energy	163
8.4.1.3	Technology	163
8.4.1.4	Transportation	164
8.4.1.5	Corporate Field	164
8.4.1.6	Income	165
8.4.1.7	Architecture	165
8.4.2	Economic Growth vs. Economic Development: Fundamental Difference	165
8.4.3	Growth and Sustainability, Mutual Existence and Exclusive	166
8.5	Economic Policies for Sustainable Development	167
8.5.1	Bio-economy and Bio-based Economy	169
8.5.2	Case Studies in Canada	169
8.6	Economic Development and Environment	170
8.6.1	Carbon Mitigation, Transfer and Energy Solutions	170
8.6.1.1	Biological Carbon Mitigation (BCM)	171
8.6.1.2	Terrestrial Carbon Sink	172
8.6.1.3	Biochar	172
8.6.1.4	Oceanic Nourishment	173
8.6.1.5	Natural Oceanic Carbon Sink	173
8.6.2	Climate Mitigation and Economics	173
8.7	Economic Analysis of Sustainable Development	174
8.7.1	Economic Tools for Evaluating Sustainable Development	174
8.7.2	Profitability Indicators for Investing in a Sustainable Project	176
8.8	Future Directions for Achieving Economic Sustainable Development	177
8.8.1	Balance Between Energy Production and Consumption	177
8.8.2	Role of Government	177
8.8.3	Role of Society	178
8.9	Conclusions	178
	References	179

9	Social Dimensions of Sustainability	183
	<i>Anita Talan, R.D. Tyagi, and Rao Y. Surampalli</i>	
9.1	Introduction	183
9.2	Concepts and Definitions of Social Sustainability	184
9.3	Social Sustainability	185
9.3.1	Social Networks	186
9.3.1.1	Contribution in Collective Groups	187
9.3.2	The Corporate System	187
9.3.3	Community Stability	188
9.4	Dimensions of Social Sustainability	188
9.4.1	Social Equity	188
9.4.2	Diversity/Multiplicity	190
9.4.3	Quality of Life	190
9.4.4	Interdependent Social Cohesion	191
9.4.5	Integrated Governance	192
9.4.6	Maturity	193
9.5	Gaps in Dimensions of Social Sustainability	193
9.5.1	Development Versus Bridge Sustainability	194
9.5.2	Development Versus Maintenance Sustainability	194
9.5.3	Maintenance Versus Bridge Sustainability	195
9.6	Research-based Policies and Federal Perspective Toward Social Sustainability	195
9.6.1	Tanzania's Policy and Its Impact	196
9.6.2	Binary Theory	196
9.6.3	Macroeconomic Social Policies in Place	197
9.6.4	Universal Declaration of Human Rights	199
9.7	Social Sustainability – an Integrated Approach	200
9.7.1	National Government	201
9.7.2	State and Regional Government	201
9.7.3	Local Government	202
9.7.4	Communities and Non-Governmental Organizations	202
9.8	Safety and Security	202
9.9	Future Perspective and Conclusions	203

Editor Biographies

Dr. Rao Y. Surampalli, PE, F.AAAS, Dist. M.ASCE, received his MS and PhD degrees in Environmental Engineering from Oklahoma State University and Iowa State University, respectively. He is a registered professional engineer in the branches of civil and environmental engineering, and also a Board Certified Environmental Engineer (BCEE) of the American Academy of Environmental Engineers (AAEE) and a Diplomate of the American Academy of Water Resources Engineers (DWRE). His expertise is in bioconversion of wastes into value-added products (biodiesel, bioplastics, biofertilizers, etc.); occurrence, fate/transport and removal of emerging contaminants (e.g. pharmaceuticals, antibiotics and endocrine-disrupting chemicals) in the environment; water and wastewater treatment; solid and hazardous waste management; water resources management; recovery and reuse of resources and energy; environmental toxicity and risk of nanomaterials; bioremediation of contaminated sites and groundwater; control of greenhouse gas emissions; and climate change mitigation and adaptation. He is an Adjunct Professor at seven universities and Distinguished/Honorary Professor at six universities. Currently, he serves, or has served on 72 national and international committees, review panels or advisory boards including the American Society of Civil Engineers (ASCE) National Committee on Energy, Environment and Water Policy. He is a Distinguished Engineering Alumnus of both the Oklahoma State and Iowa State Universities, an elected Fellow of the Water Environment Federation and International Water Association, an elected Fellow of the American Association for the advancement of Science, an elected Member of the European Academy of Sciences and Arts, an elected Member of the Russian Academy of Engineering, and a Distinguished Member of the ASCE. He is also Editor-in-Chief of the ASCE *Journal of Hazardous, Toxic and Radioactive Waste*, and Springer *Journal of Nanotechnology for Environmental Engineering*, and past Vice-Chair of the Editorial Board of *Water Environment Research Journal*. He has authored over 600 technical publications in journals and conference proceedings, including over 300 refereed journal articles, 15 patents, 24 books and 151 book chapters.

Dr. Tian C. Zhang, PE, F.ASCE, F.AAAS, is a Professor in the Department of Civil Engineering at the University of Nebraska-Lincoln (UNL), USA. He received his PhD in environmental engineering from the University of Cincinnati in 1994 and joined the UNL faculty in August 1994. Professor Zhang teaches courses related to water/wastewater treatment, remediation of hazardous wastes and non-point pollution control. Professor Zhang's

research involves fundamentals and applications of nanotechnology and conventional technology for water, wastewater, and stormwater treatment and management, remediation of contaminated environments and detection/control of emerging contaminants in the environment. Professor Zhang has published more than 145 peer-reviewed journal papers, 81 book chapters and 16 books since 1994. Professor Zhang is a Diplomate, Water Resources Engineer (D.WRE) of the American Academy of Water Resources Engineers, a Board Certified Environmental Engineer (BCEE) of the American Academy of Environmental Engineers, an elected Fellow of the American Society of Civil Engineers (F. ASCE), an elected Fellow of the American Association for the advancement of Science (F. AAAS) and an elected member of the European Academy of Sciences and Arts (EASA). Professor Zhang is an Associate Editor of *Journal of Environmental Engineering* (since 2007), *Journal of Hazardous, Toxic and Radioactive Waste* (since 2006) and *Water Environment Research* (since 2008). He has been a registered professional engineer in Nebraska, USA since 2000.

Dr. Manish Kumar Goyal is presently working as an Associate Professor in the Department of Civil Engineering, Indian Institute of Technology, Indore, India. Earlier, he worked at McGill University, Montreal, Canada, and Nanyang Technological University (NTU), Singapore. Dr. Goyal is actively involved in teaching and research in different areas such as water resources modeling, snowmelt hydrology, climate change, and extreme events analysis and soil carbon sequestration. He has authored more than 80 technical publications, including 15 book chapters, 50 refereed (peer-reviewed) journal articles, and 20 national and international conferences. He was awarded the Japan Society for the Promotion of Science (JSPS) Fellowship Program to pursue research at the University of Tokyo, Tokyo, Japan. Earlier, he was awarded the Young Scientist Award from Asia-Pacific Economic Cooperation (APEC) Climate Center, Busan, Republic of Korea, and he was also a recipient of the Canadian Commonwealth Scholarship award to pursue research at the University of Waterloo, Waterloo, Canada. Dr. Goyal is a member of the editorial board of about half a dozen journals. He has been a peer reviewer for more than 20 international journals including *Journal of Hydrology* and *International Journal of Climatology*.

Dr. Satinder K. Brar is James and Joanne Love Chair in Environmental Engineering at the Lassonde School of Engineering at York University in Toronto, Canada. She graduated with a Master's in organic chemistry from the National Chemical Laboratory, Pune, India, with a Master's in technology in environmental sciences and engineering from the Indian Institute of Technology, Bombay, Mumbai, India, and a PhD in environmental biotechnology from Institut National de la Recherche Scientifique (INRS), Québec, Canada. Dr. Brar is a recipient of the American Society of Civil Engineers (ASCE) State-of-the-Art of Civil Engineering Award (2007) for her article titled, "Bioremediation of Hazardous Wastes – A Review," which was published in the *Practice Periodical of Hazardous, Toxic & Radioactive Waste Management* – Special issue on Bioremediation. She has also received the Rudolf gold medal (2008) for the originality of the article published in *Practice Periodical of Hazardous, Toxic & Radioactive Waste Management*. Her research interests lie in the development of finished products (formulations) of wastewater and wastewater sludge-based value-added bioproducts, such as enzymes, organic acids, platform chemicals, biocontrol agents, biopesticides, butanol and biohydrogen. She is also interested in the fate of endo-

crine disrupter compounds, pharmaceuticals, nanoparticles and other toxic organic compounds during value addition of wastewater and wastewater sludge, in turn, finding suitable biological detoxification technologies. She is on the editorial board of *Brazilian Archives of Biology and Technology Journal* and associate editor of two internationally reputed journals. She has won several accolades through her professional career through awards, such as outstanding young scientist in India and several others. She has more than 300 research publications, which include 4 books, 40 book chapters, 200 original research papers, 50 research communications in international and national conferences, and has registered 2 patents to her credit.

R. D. Tyagi is an internationally recognized Professor at Institut National de la Recherche Scientifique – Eau, Terre, et Environnement (INRS-ETE), University of Québec, Canada. He holds the position of Canada Research Chair (senior) on “Bioconversion of wastewater and wastewater sludge to value added products.” Professor Tyagi is a member of the Hall of Excellence of the University of Québec (Canada) and is also a member of the European Academy of Sciences and Arts; Academician. He conducts research on hazardous/solids waste management, water/wastewater treatment, sludge treatment/disposal, and bioconversion of wastewater and wastewater sludge into value-added products. He has developed the novel technologies of simultaneous sewage sludge digestion and metal leaching, bioconversion of wastewater sludge (biosolids) into *Bacillus thuringiensis*-based biopesticides, bioplastics, biofertilizers and biocontrol agents. He is a recipient of the Outstanding Scientist Award of the International Bioprocessing Association (an International Forum on Industrial Bioprocesses) for significant contributions in the area of environmental biotechnology. He is also a recipient of the American Society of Civil Engineers (ASCE) State-of-the-Art of Civil Engineering Award, the ASCE Rudolph Hering Medal, the ASCE Wesley Horner Medal and the ASCE Best Practice Oriented Paper Award. He received the Superior Award, Excellence in Environmental Engineering Award of the American Academy of Environmental Engineers in 2015. He also received the 2010 Global Honor Award (Applied Research) of the International Water Association (IWA), the 2010 Grand Prize (University Research) of the American Academy of Environmental Engineering, the Life-Time Achievement Award (Specialist Medal, 2007) for outstanding research contributions in wastewater sludge management by the IWA, and the Excellence Award of the Natural Sciences and Engineering Research Council of Canada for industry–university collaborative research. Dr. Tyagi has published/presented over 600 papers in refereed journals, conferences proceedings and is the author of 13 books, 80 book chapters, 10 research reports and 9 patents.
