Chapter 15 – Page 381 (MacKenzie and Kazimi)
Chapter 16 – Page 405 (Santos, Pagsuyoin and Yip)
Chapter 17 – Page 427 (Shekar and Fiondella)
Chapter 18 – Page 443 (Basu)
Chapter 19 – Page 467 (Tipireddy, Rubio-Herrero, Chatterjee and Chikkagoudar)
Part I: Managing National Security Risk and Policy Programs
1 On the “Influence of Scenarios to Priorities” in Risk and Security Programs
1.1 Introduction
1.2 Risk Programs
1.3 Canonical Questions Guiding Development of Risk Programs
1.4 Scenario-Based Preferences
1.5 Methodology
1.6 Demonstration of Methods
1.7 Discussion and Conclusions
Acknowledgments
References
2 Survey of Risk Analytic Guidelines Across the Government
2.1 Department of Defense (DOD) Overview
2.2 Department of Justice (DOJ)
2.3 Environmental Protection Agency (EPA) Overview
2.4 National Aeronautics and Space Administration (NASA): Overview
2.5 Nuclear Regulatory Commission (NRC) Overview

2.6 International Standards Organization (ISO) Overview
2.7 Australia Overview
2.8 UK Overview
Acknowledgments
References
Notes
3 An Overview of Risk Modeling Methods and Approaches for National Security
3.1 Introduction
3.2 Homeland Security Risk Landscape and Missions
3.3 Background Review
3.4 Modeling Approaches for Risk Elements
3.5 Modeling Perspectives for Further Research
3.6 Concluding Remarks
Acknowledgments
References
4 Comparative Risk Rankings in Support of Homeland Security Strategic Plans
4.1 Introduction
4.2 Conceptual Challenges in Comparative Risk Ranking
4.3 Practical Challenges in Comparative Ranking of Homeland Security Risks
4.4 Policy Relevance to Strategic-Level Homeland Security Risk Rankings
Acknowledgments
References

5 A Data Science Workflow for Discovering Spatial Patterns Among Terrorist Attacks and Infrastructure
5.1 Introduction
5.2 The Data: Global Terrorism Database
5.3 The Tools: Exploring Data Interactively Using a Custom Shiny App
5.4 Example: Using the App to Explore ISIL Attacks
5.5 The Models: Statistical Models for Terrorist Event Data
5.6 More Data: Obtaining Regional Infrastructure Data to Build Statistical Models
5.7 A Model: Determining the Significance of Infrastructure on the Likelihood of an Attack
5.8 Case Study: Libya
5.9 Case Study: Jammu and Kashmir Region of India
5.10 Summary
References
Note
Part II: Strengthening Ports of Entry
6 Effects of Credibility of Retaliation Threats in Deterring Smuggling of Nuclear Weapons
6.1 Introduction
6.2 Extending Prior Game-Based Model
6.3 Comparing the Game Trees
6.4 The Extended Model
6.5 Solution to the Extended Model

6.6 Comparing the Solutions in Prior Game-Based Model and This Study
6.7 Illustration of the Extended Model Using Real Data
6.8 Conclusion and Future Research Work
References
7 Disutility of Mass Relocation After a Severe Nuclear Accident
7.1 Introduction
7.2 Raw Data
7.3 Trade-Offs Between Cancer Fatalities and Relocation
7.4 Risk-Neutral Disutility Model
7.5 Risk-Averse Disutility Model
7.6 Disutility Model with Interaction Effects
7.7 Economic Analysis
7.8 Conclusion
References
8 Scheduling Federal Air Marshals Under Uncertainty
8.1 Introduction
8.2 Literature
8.3 Air Marshal Resource Allocation Model
8.4 Stochastic Dynamic Programming Formulation
8.5 Phases of Stochastic Dynamic Programming
8.6 Integrated Allocation Model
8.7 Results
8.8 Conclusion
Acknowledgments

References
Notes
Part III: Securing Critical Cyber Assets
9 Decision Theory for Network Security: Active Sensing for Detection and Prevention of Data Exfiltration
9.1 Introduction
9.2 Background and Related Work
9.3 Threat Model
9.4 POMDP Abstraction
9.5 VD-POMDP Framework
9.6 Evaluation
9.7 Game Theoretic Extensions
9.8 Conclusion and Future Work
Acknowledgments
References
10 Measurement of Cyber Resilience from an Economic Perspective
10.1 Introduction
10.2 Economic Resilience
10.3 Cyber System Resilience Tactics
10.4 Resilience for Cyber-Related Sectors
10.5 Conclusion
References
Notes
11 Responses to Cyber Near-Misses: A Scale to Measure Individual Differences
11.1 Introduction
11.2 Scale Development and Analysis Outline

11.3 Method
11.4 Results
11.5 Discussion
Acknowledgments
References
Notes
Part IV: Enhancing Disaster Preparedness and Infrastructure Resilience
12 An Interactive Web-Based Decision Support System for Mass Dispensing, Emergency Preparedness, and Biosurveillance
12.1 Introduction
12.2 System Architecture and Design
12.3 System Modules and Functionalities
12.4 Biodefense, Pandemic Preparedness Planning, and Radiological and Large-Scale Disaster Relief Efforts
12.5 Challenges and Conclusions
Acknowledgments
References
13 Measuring Critical Infrastructure Risk, Protection, and Resilience in an All-Hazards Environment
13.1 Introduction to Critical Infrastructure Risk Assessment
13.2 Motivation for Critical Infrastructure Risk Assessments
13.3 Decision Analysis Methodologies for Creating Critical Infrastructure Risk Indicators
13.4 An Application of Critical Infrastructure Protection, Consequence, and Resilience

Assessment
13.5 Infrastructure Interdependencies
13.6 What's Next for Critical Infrastructure Risk Assessments
References
Notes
14 Risk Analysis Methods in Resilience Modeling: An Overview of Critical Infrastructure Applications
14.1 Introduction
14.2 Background
14.3 Modeling the Resilience of Critical Infrastructure Systems
14.4 Assessing Risk in Resilience Models
14.5 Opportunities and Challenges
14.6 Concluding Remarks
References
15 Optimal Resource Allocation Model to Prevent, Prepare, and Respond to Multiple Disruptions, with Application to the *Deepwater Horizon* Oil Spill and Hurricane Katrina
15.1 Introduction
15.2 Model Development
15.3 Application: Deepwater Horizon and Hurricane Katrina
15.4 Conclusions
References
16 Inoperability Input–Output Modeling of Electric Power Disruptions
16.1 Introduction

16.2 Risk Analysis of Natural and Man-Caused Electric Power Disruptions
16.3 Risk Management Insights for Disruptive Events
16.4 Modeling the Ripple Effects for Disruptive Events
16.5 Inoperability Input–Output Model
16.6 Sample Electric Power Disruptions Scenario Analysis for the United States
16.7 Summary and Conclusions
References
17 Quantitative Assessment of Transportation Network Vulnerability with Dynamic Traffic Simulation Methods
17.1 Introduction
17.2 Dynamic Transportation Network Vulnerability Assessment
17.3 Sources of Input for Dynamic Transportation Network Vulnerability Assessment

Wiley Series in

Operations Research and Management Science

Operations Research and Management Science (ORMS) is a broad, interdisciplinary branch of applied mathematics concerned with improving the quality of decisions and processes and is a major component of the global modern movement towards the use of advanced analytics in industry and scientific research. The *Wiley Series in Operations Research and Management Science* features a broad collection of books that meet the varied needs of researchers, practitioners, policy makers, and students who use or need to improve their use of analytics. Reflecting the wide range of current research within the ORMS community, the Series encompasses application, methodology, and theory and provides coverage of both classical and cutting edge ORMS concepts and developments. Written by recognized international experts in the field, this collection is appropriate for students as well as professionals from private and public sectors including industry, government, and nonprofit organization who are interested in ORMS at a technical level. The Series is comprised of four sections: Analytics; Decision and Risk Analysis; Optimization Models; and Stochastic Models.

Advisory Editors • *Stochastic Models*

Tava Olsen, The University of Auckland

Raúl Gouet, University of Chile

Founding Series Editor

James J. Cochran, University of Alabama

Analytics

Yang and Lee • *Healthcare Analytics: From Data to Knowledge to Healthcare Improvement*

Attoh-Okine • *Big Data and Differential Privacy: Analysis Strategies for Railway Track Engineering*

Forthcoming Titles

Kong and Zhang • *Decision Analytics and Optimization in Disease Prevention and Treatment*

Behavioral Research

Donohue, Katok, and Leider • *The Handbook of Behavioral Operations*

Decision and Risk Analysis

Barron • *Game Theory: An Introduction*, Second Edition

Brailsford, Churilov, and Dangerfield • *Discrete-Event Simulation and System Dynamics for Management Decision Making*

Johnson, Keisler, Solak, Turcotte, Bayram, and Drew • *Decision Science for Housing and Community Development: Localized and Evidence-Based Responses to Distressed Housing and Blighted Communities*

Mislick and Nussbaum • *Cost Estimation: Methods and Tools*

Chatterjee, Brigantic, and Waterworth • Applied Risk Analysis for Guiding Homeland Security Policy and Decisions

Forthcoming Titles

Aleman and Carter • *Healthcare Engineering*

Optimization Models

Ghiani, Laporte, and Musmanno • *Introduction to Logistics Systems Management*, Second Edition

Forthcoming Titles

Tone • *Advances in DEA Theory and Applications: With Examples in Forecasting Models*

Stochastic Models

Ibe • Random Walk and Diffusion Processes

Forthcoming Titles

Matis • *Applied Markov Based Modelling of Random Processes*

Applied Risk Analysis for Guiding Homeland Security Policy and Decisions
