Preface

This 7th edition is a milestone in the series of Inborn Metabolic Diseases (IMD): Diagnosis and Treatment, first published in 1990.

Within the last 6 years a Copernican revolution in our understanding of IMD has changed the definition, concepts, paradigms, and classification. This new edition confirms the ubiquity of biochemical reactions in cellular biological processes, disturbances of which cause the large majority of human genetic disorders, many not classically labelled as metabolic diseases.

While previous editions remained largely focused on disorders of intermediary metabolism and organelles, mostly diagnosed with metabolic markers, this edition extends the concept of IMD to include disturbances of molecular machinery, diagnosed by molecular techniques but which currently may not have measurable metabolic markers.

About 600 new disorders are described in this 7th edition. Many are included in two new chapters: ► Chap. 39, *Disorders of nucleic acid metabolism, tRNA metabolism and ribosomal biogenesis*, and ► Chap. 44, *Disorders of Cellular Trafficking*. Defects in complex molecule synthesis and remodelling, many disorders of cellular or organelles transporters involving small or complex molecules, and new disorders involving energetic processes have also been considerably expanded.

Up to 85% of IMDs impact on neurodevelopment or are responsible for neurodegeneration. Acute, chronic or progressive neurological syndromes, psychiatric presentations, developmental delay, intellectual disability, neurodevelopment disturbances and neurodegeneration at any age deserve special attention. A new editor with a special expertise in neurology has joined us for the purpose of describing these disorders. The description of neurological presentations, with about 35 tables and algorithms, now accounts for about 50% of ► Chap. 1. The new concept of synaptic vesicle disorders is developed in ► Chap. 30.

While the most recent international classification of inborn errors of metabolism (IEM) encompasses >1400 disorders, from a clinical point of view, all IEM can be maintained in a simplified classification that mixes elements from a clinical diagnostic perspective and a pathophysiological approach based on three large groups. Our general clinical approach and algorithms are based upon this simplified classification and presented in ► Chap. 1 which should be read first.

In this era of genome sequencing, powerful computerized programs, and emerging artificial intelligence, we remain convinced that metabolic physicians must have a sound clinical training. As biochemical and molecular investigations grow in complexity, there is a risk that these effective but complex, time consuming, and expensive methods will be used in an uncontrolled and uncritical way. In view of the major improvements in treatment, it is crucial that clinicians do not miss IMD for which specific and effective treatment may be available. Physicians should be able to initiate a simple method of clinical screening, particularly in the emergency room, not only for children but also for adults.

While this new edition highlights recent findings, it continues to provide a comprehensive review of all IEM, with a particular focus on the clinical and biochemical approach to recognition, diagnosis and treatment at all ages. The clinical algorithms of ► Chaps. 1 and 2 incorporate both ‘old’ and ‘new’ disorders, and there are now many more algorithms detailing neurological presentations. An updated listing of metabolic markers and profiles and a section on molecular techniques including next generation sequencing and gene panels are included in ► Chap. 3.

As before, we continue to advocate referral to specialist centres for the diagnosis and treatment of inherited metabolic disorders. For countries in the Europe a list of such centres is compiled by the Society for the Study of Inborn Errors of Metabolism (SSIEM), while for the United States and Canada, Japan, Australia, South American

and Middle East countries, comparable lists are compiled by the American (SIMD), Japanese (JIMD), Australian (AIMD) South Latin America (SLEIMPN) and Middle East societies for the study of inherited metabolic diseases, respectively.

We welcome new authors and thank those previous authors who, while not involved with this edition, have helped to lay the foundation for this book.

Contents

I Diagnosis and Treatment: General Principles

| | |
|--|-----------|
| 1 Clinical Approach to Inborn Errors of Metabolism in Paediatrics | 3 |
| <i>Jean-Marie Saudubray and Ángeles García-Cazorla</i> | |
| 1.1 Simplified Classification of IEM in 3 Groups..... | 6 |
| 1.1.1 Group 1. Small Molecule Disorders (► Chaps. 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, and 34)..... | 6 |
| 1.1.2 Group 2. Complex Molecule Disorders (► Chaps. 35, 36, 37, 38, 39, 40, 41, 42, 43, and 44) | 7 |
| 1.1.3 Group 3: Disorders Involving Energy Metabolism (► Chaps. 5, 6, 7, 8, 9, 10, 11, 12, and 13) | 8 |
| 1.1.4 Clinical Approach..... | 9 |
| 1.2 Antenatal and Congenital Presentations..... | 9 |
| 1.2.1 Classification of Antenatal Manifestations in Three Major Clinical Categories..... | 9 |
| 1.2.2 Clinical Circumstances of Presentations | 14 |
| 1.3 Presentation in Neonates and Infants (<1 Year) | 14 |
| 1.3.1 Neurological Deterioration (Coma, Lethargy): Metabolic Encephalopathy..... | 15 |
| 1.3.2 Seizures..... | 15 |
| 1.3.3 Hypotonia | 21 |
| 1.3.4 Other Severe Motor Dysfunctions | 22 |
| 1.3.5 Hepatic Presentations..... | 22 |
| 1.3.6 Congenital Diarrhoeal Disorders (CDD) | 23 |
| 1.3.7 Cardiac and Vascular Presentations (See Also Later Presentations 1.4.8) | 23 |
| 1.3.8 Neonatal Onset Multisystemic, Chronic Inflammation Disease (NOMID)..... | 24 |
| 1.3.9 Initial Approach and Protocol for Investigation at the Bedside | 24 |
| 1.3.10 According to this Bedside Protocol Most Patients with Neurological Findings Can Be Classified into One of Six Metabolic Types (► Table 1.4) | 25 |
| 1.4 Later Onset Emergencies: Acute and Recurrent Attacks (Early Childhood and Beyond) | 27 |
| 1.4.1 Coma, Strokes and Attacks of Vomiting with Lethargy (► Table 1.6) | 29 |
| 1.4.2 Recurrent Attacks of Ataxia (► Table 1.7) for Adult Presentations See ► Chap. 2 | 33 |
| 1.4.3 Acute Psychiatric Symptoms (► Table 1.8) for Adult Presentations See ► Chap. 2..... | 33 |
| 1.4.4 Dehydration (► Table 1.9) | 35 |
| 1.4.5 Reye Syndrome, Sudden Unexpected Death in Infancy (SUDI) and Near-Miss..... | 35 |
| 1.4.6 Exercise Intolerance and Rhabdomyolysis (Recurrent Myoglobinuria) (See Also ► Sect. 2.3.10 Adult Presentations) | 37 |
| 1.4.7 Abdominal Pain (Recurrent Attacks) | 38 |
| 1.4.8 Cardiac Failure, Cardiac Arrhythmias and Cardiomyopathy (► Tables 1.11 and 1.12) | 38 |
| 1.4.9 Liver Failure, Ascites, Oedema | 41 |
| 1.4.10 Pain in Extremities and Bone Crisis..... | 41 |
| 1.4.11 Metabolic Derangements and Diagnostic Tests | 42 |
| 1.4.12 Metabolic Acidosis (► Fig. 1.2) | 42 |
| 1.4.13 Ketosis (► Fig. 1.3)..... | 43 |
| 1.4.14 Hyperlactataemia | 44 |
| 1.4.15 Hypoglycaemia | 45 |
| 1.4.16 Hyperammonaemia | 47 |
| 1.4.17 Hyperuricaemias and Hypouricaemias | 48 |
| 1.4.18 Isolated Elevated Transaminases | 48 |
| 1.4.19 Glucosuria | 48 |
| 1.5 Chronic and Progressive Neurological Symptoms (Mental Retardation, Developmental Delay, Epilepsy, Neurological Deterioration and Psychiatric Symptoms)..... | 48 |

| | | |
|--------|---|-----|
| 1.5.1 | Infants (Before 1 year)..... | 49 |
| 1.5.2 | Early Childhood to Adolescence (>1 year to 18 years) | 55 |
| 1.5.3 | Onset in Adulthood (>15 years to >70 years) | 87 |
| 1.5.4 | Deafness | 89 |
| 1.5.5 | Head Circumference, Cephalhematomas, Subdural Hematomas (► Table 1.22) | 89 |
| 1.5.6 | Neuroimaging Signs..... | 89 |
| 1.5.7 | Neuro-ophthalmological Signs (► Tables 1.28 and 1.29) | 89 |
| 1.5.8 | Neurophysiological Signs..... | 95 |
| 1.5.9 | Recommended Laboratory Tests in Neurological Syndromes..... | 98 |
| 1.6 | Specific Organ Signs and Symptoms..... | 98 |
| 1.6.1 | Cardiology..... | 98 |
| 1.6.2 | Dermatology..... | 98 |
| 1.6.3 | Endocrinology (► Table 1.35) | 104 |
| 1.6.4 | Gastroenterology and Nutritional Findings..... | 107 |
| 1.6.5 | Haematology | 107 |
| 1.6.6 | Hepatology..... | 112 |
| 1.6.7 | Immunology (See Also Neutropenia ► Table 1.38) | 114 |
| 1.6.8 | Myology | 115 |
| 1.6.9 | Nephrology (► Table 1.40)..... | 115 |
| 1.6.10 | Neurology and Psychiatry | 117 |
| 1.6.11 | Ophthalmologic Signs..... | 117 |
| 1.6.12 | Orthopaedic Signs (► Table 1.43) | 117 |
| 1.6.13 | Pneumology..... | 120 |
| 1.6.14 | Psychiatry..... | 120 |
| 1.6.15 | Rheumatology..... | 120 |
| 1.6.16 | Stomatology..... | 121 |
| | References..... | 121 |
| 2 | Inborn Errors of Metabolism in Adults: A Diagnostic Approach to Neurological and Psychiatric Presentations | 125 |
| | <i>Fanny Mochel and Frédéric Sedel</i> | |
| 2.1 | Differences Between Paediatric and Adult Phenotypes | 126 |
| 2.2 | General Approach to IEM in Adulthood | 128 |
| 2.2.1 | Accumulation of Small Molecules..... | 128 |
| 2.2.2 | Deficiency of Small Molecules..... | 130 |
| 2.2.3 | Accumulation of Complex Molecules..... | 130 |
| 2.2.4 | Deficiency of Complex Molecules..... | 130 |
| 2.2.5 | Disorders of Energy Metabolism | 130 |
| 2.3 | Specific Approaches to Neurometabolic Presentations in Adults..... | 131 |
| 2.3.1 | Encephalopathies/Comas | 131 |
| 2.3.2 | Strokes and Pseudo-Strokes | 131 |
| 2.3.3 | Movement Disorders | 132 |
