Blackwell Handbooks in Linguistics

This outstanding multi-volume series covers all the major subdisciplines within linguistics today and, when complete, will offer a comprehensive survey of linguistics as a whole.

The most recent publications in the series can be found below. To see the full list of titles available in the series, please visit www.wiley.com/go/linguistics-handbooks

The Handbook of Clinical Linguistics

Edited by Martin J. Ball, Michael R. Perkins, Nicole Müller, & Sara Howard

The Handbook of Pidgin and Creole Studies

Edited by Silvia Kouwenberg & John Victor Singler

The Handbook of Language Teaching

Edited by Michael H. Long & Catherine J. Doughty

The Handbook of Computational Linguistics and Natural Language Processing

Edited by Alexander Clark, Chris Fox, & Shalom Lappin

The Handbook of Language and Globalization

Edited by Nikolas Coupland

The Handbook of Hispanic Sociolinguistics

Edited by Manuel Diaz-Campos

The Handbook of Language Socialization

Edited by Alessandro Duranti, Elinor Ochs, & Bambi B. Schieffelin

The Handbook of Intercultural Discourse and Communication

Edited by Christina Bratt Paulston, Scott F. Kiesling, & Elizabeth S. Rangel

The Handbook of Historical Sociolinguistics

Edited by Juan Manuel Hernandez-Campoy & Juan Camilo Conde-Silvestre

The Handbook of Hispanic Linguistics

Edited by Jose Ignacio Hualde, Antxon Olarrea, & Erin O'Rourke

The Handbook of Conversation Analysis

Edited by Jack Sidnell & Tanya Stivers

The Handbook of English for Specific Purposes

Edited by Brian Paltridge & Sue Starfield

The Handbook of Spanish Second Language Acquisition

Edited by Kimberly L. Geeslin

The Handbook of Chinese Linguistics

Edited by C.-T. James Huang, Y.-H. Audrey Li, & Andrew Simpson

The Handbook of Language Emergence

Edited by Brian MacWhinney & William O'Grady

The Handbook of Korean Linguistics

Edited by Lucien Brown & Jaehoon Yeon

The Handbook of Speech Production

Edited by Melissa A. Redford

The Handbook of Contemporary Semantic Theory, Second Edition

Edited by Shalom Lappin & Chris Fox

The Handbook of Classroom Discourse and Interaction

Edited by Numa Markee

The Handbook of Narrative Analysis

Edited by Anna De Fina & Alexandra Georgakopoulou

The Handbook of English Pronunciation

Edited by Marnie Reed & John M. Levis

The Handbook of Discourse Analysis, Second Edition
Edited by Deborah Tannen, Heidi E. Hamilton, & Deborah Schiffrin

The Handbook of Bilingual and Multilingual Education
Edited by Wayne E. Wright, Sovicheth Boun, & Ofelia Garcia

The Handbook of Portuguese Linguistics
Edited by W. Leo Wetzels, Joao Costa, & Sergio Menuzzi

The Handbook of Translation and Cognition
Edited by John W. Schwieter & Aline Ferreira

The Handbook of Linguistics, Second Edition
Edited by Mark Aronoff & Janie Rees-Miller

The Handbook of Technology and Second Language Teaching and Learning
Edited by Carol A. Chapelle & Shannon Sauro

The Handbook of Psycholinguistics
Edited by Eva M. Fernandez & Helen Smith Cairns

The Handbook of Dialectology
Edited by Charles Boberg, John Nerbonne, & Dominic Watt

The Handbook of the Neuroscience of Multilingualism
Edited by John W. Schwieter

The Handbook of English Linguistics, Second Edition
Edited by Bas Aarts, April McMahon & Lars Hinrichs

The Handbook of Language Contact, Second Edition
Edited by Raymond Hickey

The Handbook of Informal Language Learning
Mark Dressman, Randall William Sadler

The Handbook of World Englishes, Second Edition
Edited by Braj B. Kachru, Yamuna Kachru, & Cecil L. Nelson

The Handbook of TESOL in K-12

Edited by Luciana C. de Oliveira

The Handbook of Asian Englishes

Edited by Kingsley Bolton, Werner Botha, Andy Kirkpatrick

The Handbook of Historical Linguistics

Edited by Richard D Janda, Brian D Joseph, & Barbara S Vance

The Handbook of Advanced Proficiency in Second Language Acquisition

Edited by Paul A. Malovrh & Alessandro G. Benati

The Handbook of Language and Speech Disorders, Second Edition

Edited by Jack S. Damico, Nicole Müller, & Martin J. Ball

The Handbook of Speech Perception, Second Edition

Edited by Jennifer S. Pardo, Lynne C. Nygaard, Robert E. Remez & David B. Pisoni

The Handbook of Language and Speech Disorders

Edited by

Jack S. Damico, Nicole Müller, and Martin J. Ball

List of Figures

3.1	Age-related hearing loss not caused by disease, noise or substance exposure, as described in ISO 7029 (2012) for 40, 60 and 80 years of age. Data are the means from the male and female values: thick line is the median; boxes are the 25th and the 75th percentiles; and, whiskers are the 10th and the 90th percentiles.
3.2	Descriptive model of an average postlingually deafened CI candidate showing auditory performance as a function of hearing ability over the entire patient journey. The duration of the decline of moderate hearing loss (mHL) and severe/profound hearing loss (s/p HL) is assumed to be 20 and 10 years, respectively.
6.1	Concentric circles of influence that impact quality of life.
8.1	Data from 4,867 parent reports on their (US) children's performance on the Words and Sentences form of the MBCDI.
8.2	Language Development Scale scores by family background for 132 UK children at 42 months.
14.1	The Wernicke-Lichtheim model.
14.2	The cognitive neuropsychological information processing model.
19.1	Trends in recovery from stuttering. Note the rapid decrease in stuttering for the “recovered group” (●), while a slower decrease is noted for the “persistent group” (◆). The control group shows little change (△).

19.2	The demands and capacities model—whenever demand exceeds capacity, stuttering can occur.
21.1	Main categories of cleft lip and/or palate.
21.2	Consonant errors typical of speech in children born with cleft palate (cleft speech characteristics). Palate in rest position for anterior and posterior CSCs.
22.1	The double sigmoid curve model illustrates the fine balance between tumor control and long-term radiation side-effects. As the radiation dose increases over time, the cells in the radiated tissue start dying. This process can be expressed as a sigmoid function. The tumor cells are more vulnerable to the radiation. However, the surrounding healthy tissue is also stressed by the radiation. The double sigmoid curve model allows the radiation oncologist to determine a theoretical cutoff point at which the tumor is largely controlled but the side-effects are still tolerable for the patient.
22.2	Permanent tracheostoma following total laryngectomy
22.3	Tracheostoma cover.
22.4	Heat and moisture exchanger (“artificial nose”).
22.5	Transcervical electrolarynx.
22.6	Sound production with a transcervical electrolarynx.
22.7	Position of the transcervical electrolarynx on the neck.
22.8	An oral electrolarynx. The metal box contains the batteries and the controls for the external oscillator. A tube is used to transmit the sound from the oscillator into the oral cavity.
22.9	Sound production with an oral electrolarynx.

22.10	A laryngectomy using an oral electrolarynx.
22.11	Production of esophageal speech. (a) Air is injected into the upper esophagus by building up pressure in the oral cavity. (b) As the air is ejected from the upper esophagus, it vibrates the upper esophageal sphincter and generates sound.
22.12	Sound production using a tracheoesophageal voice prosthesis.
22.13	Tracheoesophageal voice prostheses.
22.14	A large lateral lingual carcinoma.
22.15	Comparison of two patients with lateral lingual resections of similar sizes. (a) Reconstruction using a local closure approach. (b) Reconstruction using a radial forearm free-flap.
22.16	Patient with an extensive velopharyngeal resection.
22.17	Speech bulb appliance.
22.18	Patient with an extensive facial resection, including exenteration of the right eye.

Notes on Contributors

Hermann Ackermann has a Master's degree in philosophy and psychology, and a medical degree (speciality: clinical neurology and neurophysiology). Besides his clinical training in the field of neurology, he did postgraduate work, especially on Parkinsonian and cerebellar dysarthria in the laboratory of Professor Wolfram Ziegler, Departments of Neuropsychology at the Max Planck Institute for Psychiatry, and the City Hospital Bogenhausen, Munich. Since 1996, he has been Professor of Neurological Rehabilitation at the Medical School, University of Tübingen, and head of the Research Group Neurophonetics at the HERTIE-Institute for Clinical Neurosciences, University of Tübingen. He is also head of the Department of Neurological Rehabilitation at the Rehabilitation Center Hohenurach, Bad Urach, associated with the University of Tübingen. His research focuses on the brain correlates of speech production and speech perception, using functional magnetic resonance imaging and magnetoencephalography.

Elena Babatsouli is an Assistant Professor in the Department of Communicative Disorders at the University of Louisiana at Lafayette, the founding co-editor of the *Journal of Monolingual and Bilingual Speech*, President of the Association of Monolingual and Bilingual Speech, and founder of the International Symposium on Monolingual and Bilingual Speech. She received a BA in English from Royal Holloway, University of London, an MA in Languages and Business from London South Bank University, and a PhD in Linguistics from the University of Crete. Elena's research interests are on child/adult bilingual and monolingual (cross-linguistically) phonological acquisition

and assessment, second-language acquisition, speech sound disorders, culturally responsive practices in speech and language sciences, phonetics/phonology, morphology, psycholinguistics, clinical linguistics, and measures/quantitative methods. She has thirty publications, five edited books, three conference proceedings, and two edited special issues in journals.

Martin J. Ball is Honorary Professor of Linguistics at Bangor University, Wales, having previously held positions in Wales, Ireland, the US, and Sweden. He holds a PhD from the University of Wales, and a DLitt from Bangor University. He co-edits the journals *Clinical Linguistics and Phonetics* and *Journal of Multilingual and Bilingual Speech*, as well as book series for Multilingual Matters and Equinox Publishers. He has published widely in communication disorders, phonetics, sociolinguistics, bilingualism, and Welsh linguistics. Recently he completed co-editing the four-volume *Encyclopedia of Human Communication Sciences and Disorders* for Sage publishers. He is an honorary fellow of the Royal College of Speech and Language Therapists, and a fellow of the Learned Society of Wales. He currently lives in Cork, Ireland.

Margaret Lehman Blake, PhD, CCC-SLP, is a Professor in the Department of Communication Sciences and Disorders at the University of Houston. She earned her PhD from the University of Pittsburgh and completed a postdoctoral fellowship at the Mayo Clinic. Her research focuses on cognitive-communication disorders associated with right hemisphere brain damage (RHD), to understand the underlying deficits and to develop treatments. She has authored many articles, chapters, and the book *The Right Hemisphere and Disorders of Cognition and Communication*. She has presented nationally and internationally on evidence-based practice for disorders associated with RHD. She is a recipient of the University of

Houston Teaching Excellence Award and has served as the President of the Academy of Neurologic Communication Disorders & Sciences (ANCDS).

Stephanie A. Borrie, PhD, is an Associate Professor of Communication Disorders at Utah State University. She is also the director of the Human Interaction Lab, which takes a dyadic approach to the study of speech communication. Her research investigates how listeners understand and adapt to speakers with dysarthria, laying the groundwork for listener-targeted interventions to improve intelligibility of dysarthric speech. She also investigates the coordinative nature of spoken dialog, extending the study of speech impairment to the realm of conversation. Her research is currently funded by the National Institutes of Health, National Institute on Deafness and other Communication Disorders (USA). She serves as an editor for the *Journal of Speech, Language, Hearing Research*, a journal of the American Speech, Language, and Hearing Association.

Christine Brennan is an Assistant Professor in the Department of Speech, Language, and Hearing Sciences at the University of Colorado, Boulder, where she is also a member of the Institute of Cognitive Science and Intermountain Neuroimaging Consortium (INC). She holds a PhD and a clinical MA from Northwestern University, Illinois. She is a certified speech-language pathologist and a cognitive neuroscientist. As the director of the ANCHAR Lab (Applied Neuroscience for Communication, Hearing, And Reading), her current research examines the relationship between speech sound processing and reading skill in children and adults with and without reading disabilities. She also engages in research examining clinical outcomes for children and adults with various types of learning disabilities, including developmental and intellectual disabilities. Presently, she is the only speech-language pathologist serving on the professional advisory

board for the PRISMS (Parents and Researchers Interested in Smith-Magenis Syndrome) organization. She lives in Louisville, Colorado.

Tim Bressmann is an Associate Professor in the Department of Speech-Language Pathology at the University of Toronto. He studied at the University of Freiburg and Trinity College Dublin before obtaining an MA in Clinical Linguistics from the University of Bielefeld. He then worked as a clinician in different hospitals while also studying for his PhD in Phonetics at the University of Munich. Tim Bressmann's research focuses on speech production in individuals with craniofacial syndromes and head and neck cancer. He is a Section Editor of the *Cleft Palate-Craniofacial Journal* and an Associate Editor of *Clinical Linguistics and Phonetics*.

Bonnie Brinton is professor emeritus at Brigham Young University (BYU), Provo, Utah. Her work focuses on assessment and intervention with children who experience difficulty with social communication. Dr Brinton has been a professor at the University of Nevada, a research scientist at the Schiefelbusch Institute for Lifespan Studies, University of Kansas, and Dean of Graduate Studies at BYU. She is a fellow of the American Speech-Language-Hearing Association and received Honors of the Association in 2019.

Chris Code is Professorial Research Fellow in the Department of Psychology, Washington Singer Labs, University of Exeter, England. He is the Foundation Professor of Communication Sciences and Disorders at the University of Sydney and past Research Manager for *Speakability*, and Patron of *AphasiaNow*. He is also co-founding Editor of the journal *Aphasiology*. His research interests include the cognitive neuroscience of language and speech, psychosocial consequences of aphasia,

recovery and treatment of aphasia, the evolution of speech and language, number processing, and apraxia.

Louise Cummings is Professor in the Department of English and Associate Dean in the Faculty of Humanities at The Hong Kong Polytechnic University. She teaches and conducts research in pragmatics, clinical linguistics, and health reasoning. She is the author and editor of 18 books, including most recently *Fallacies in Medicine and Health* (Palgrave Macmillan, 2020), *Language in Dementia* (Cambridge University Press, 2020) and *Pragmatic Language Disorders* (Springer, 2021). She is editor of the book series *Routledge Research in Speech-Language Pathology*. Louise Cummings has been a Visiting Fellow in the Department of Philosophy at Harvard University, and the Centre for Research in the Arts, Social Sciences and Humanities (CRASSH) at Cambridge University. She is a member of the Royal College of Speech and Language Therapists, the Health & Care Professions Council in the UK, and the Hong Kong Academy of Humanities.

Holly Damico is an Associate Professor at the University of Louisiana at Lafayette, and a Hawthorne-BoRSF Endowed Professor. She co-founded and co-directs the Summer Language and Literacy Project. Her clinical and research interests include language and literacy acquisition and intervention as contextualized and social transactional processes, with a focus on qualitative research methods. She has authored and co-authored 18 peer-reviewed book chapters and articles in those areas. She received the 2017-18 Rising Star Researcher Award in Liberal Arts at UL Lafayette.

Jack S. Damico is a clinical linguist and a speech-language pathologist with a Master's degree in communicative disorders and a PhD in linguistics. With over 12 years of clinical experience as a speech-language pathologist in the
