## Series Editors

Timothy J. Barth, NASA Ames Research Center, Moffett Field, CA, USA

Michael Griebel, Institut für Numerische Simulation, Universität Bonn, Bonn, Germany

David E. Keyes, Applied Mathematics and Computational Science, King Abdullah University of Science and Technology, Thuwal, Saudi Arabia

Risto M. Nieminen, Department of Applied Physics, Aalto University School of Science & Technology, Aalto, Finland

Dirk Roose, Department of Computer Science, Katholieke Universiteit Leuven, Leuven, Belgium

Tamar Schlick, Courant Institute of Mathematical Sciences, New York University, New York, NY, USA

This series contains monographs of lecture notes type, lecture course material, and high-quality proceedings on topics described by the term “computational science and engineering”. This includes theoretical aspects of scientific computing such as mathematical modeling, optimization methods, discretization techniques, multiscale approaches, fast solution algorithms, parallelization, and visualization methods as well as the application of these approaches throughout the disciplines of biology, chemistry, physics, engineering, earth sciences, and economics.

# Preface

This volume contains a selection of 84 papers submitted to the 26th International Conference on Domain Decomposition Methods, hosted by the Department of Mathematics at the Chinese University of Hong Kong, and held virtually on December 7–12, 2020.

## Background of the Conference Series

With its first meeting in Paris in 1987, the International Conference on Domain Decomposition Methods has been held in 15 countries in Asia, Europe, and North America, and now for the first time in Hong Kong SAR, China. The conference is held at roughly 18-month intervals. A complete list of the 26 meetings appears below.

Domain decomposition is often seen as a form of divide-and-conquer for mathematical problems posed over a physical domain, reducing a large problem into a collection of smaller problems, each of which is much easier to solve computationally than the undecomposed problem, and most or all of which can be solved independently and concurrently, and then solved iteratively in a consistent way. Much of the theoretical interest in domain decomposition algorithms lies in ensuring that the number of iterations required to converge is very small. Domain decomposition algorithms can be tailored to the properties of the physical system, as reflected in the mathematical operators, to the number of processors available, and even to specific architectural parameters, such as cache size and the ratio of memory bandwidth to floating point processing rate, proving it to be an ideal paradigm for large-scale simulation on advanced architecture computers.

The principal technical content of the conference has always been mathematical, but its motivation has primarily been to make efficient use of distributed memory computers for complex applications arising in science and engineering. While research in domain decomposition methods is presented at numerous venues, the International Conference on Domain Decomposition Methods is the only regularly occurring international forum dedicated to interdisciplinary technical interactions

between theoreticians and practitioners working in the development, analysis, software implementation, and application of domain decomposition methods.

As we approach the dawn of exascale computing, where we will command  $10^{18}$  floating point operations per second, efficient and mathematically well-founded methods for the solution of large-scale systems will clearly become more and more important — as will their sound realization in the framework of modern HPC architectures. In fact, the massive parallelism, which makes exascale computing possible, requires the development of new solution methods, which are capable of efficiently exploiting this large number of cores as well as the connected hierarchies for memory access. Ongoing developments such as parallelization in time asynchronous iterative methods or nonlinear domain decomposition methods show that this massive parallelism not only demands new solution and discretization methods, but also fosters the development of new approaches.

Here is a list of the 26 conferences on Domain Decomposition:

1. Paris, France, January 7–9, 1987
2. Los Angeles, USA, January 14–16, 1988
3. Houston, USA, March 20–22, 1989
4. Moscow, USSR, May 21–25, 1990
5. Norfolk, USA, May 6–8, 1991
6. Como, Italy, June 15–19, 1992
7. University Park, Pennsylvania, USA, October 27–30, 1993
8. Beijing, China, May 16–19, 1995
9. Ullensvang, Norway, June 3–8, 1996
10. Boulder, USA, August 10–14, 1997
11. Greenwich, UK, July 20–24, 1998
12. Chiba, Japan, October 25–20, 1999
13. Lyon, France, October 9–12, 2000
14. Cocoyoc, Mexico, January 6–11, 2002
15. Berlin, Germany, July 21–25, 2003
16. New York, USA, January 12–15, 2005
17. St. Wolfgang–Strobl, Austria, July 3–7, 2006
18. Jerusalem, Israel, January 12–17, 2008
19. Zhangjiajie, China, August 17–22, 2009
20. San Diego, California, USA, February 7–11, 2011
21. Rennes, France, June 25–29, 2012
22. Lugano, Switzerland, September 16–20, 2013
23. Jeju Island, Korea, July 6–10, 2015
24. Spitsbergen, Svalbard, Norway, February 6–10, 2017
25. St. John’s, Newfoundland, Canada, July 23–27, 2018
26. Hong Kong SAR (virtual format), China, December 7–12, 2020

## **International Scientific Committee on Domain Decomposition Methods**

- Petter Bjørstad, University of Bergen, Norway
- Susanne Brenner, Louisiana State University, USA
- Xiao-Chuan Cai, CU Boulder, USA
- Martin J. Gander, University of Geneva, Switzerland
- Laurence Halpern, University Paris 13, France
- David Keyes, KAUST, Saudi Arabia
- Hyea Hyun Kim, Kyung Hee University, Korea
- Axel Klawonn, Universität zu Köln, Germany
- Ralf Kornhuber, Freie Universität Berlin, Germany
- Ulrich Langer, University of Linz, Austria
- Luca Pavarino, University of Pavia, Italy
- Olof Widlund, Courant Institute, USA
- Jinchao Xu, Penn State, USA
- Jun Zou, The Chinese University of Hong Kong, Hong Kong SAR, China

## **About the 26th Conference**

The twenty-sixth International Conference on Domain Decomposition Methods had close to 250 participants from about 30 different countries. The conference contained 12 invited presentations selected by the International Scientific Committee, fostering both experienced and younger scientists, 22 minisymposia around specific topics and 6 contributed sessions. The present proceedings contain a selection of 84 papers grouped into three separate groups: 9 plenary papers, 60 minisymposium papers, and 15 contributed papers.

## **Sponsoring Organizations**

- Department of Mathematics, The Chinese University of Hong Kong
- Department of Mathematics, Hong Kong Baptist University
- Faculty of Science, The Chinese University of Hong Kong
- United College, The Chinese University of Hong Kong
- The Hong Kong Mathematical Society

## **Local Organizing/Program Committee Members**

- Jian-Feng Cai, Hong Kong University of Science and Technology
- Raymond Chan, City University of Hong Kong
- Zhiming Chen, Chinese Academy of Sciences
- Eric Chung, The Chinese University of Hong Kong
- Felix Kwok, Université Laval and Hong Kong Baptist University

- Lok Ming Lui, The Chinese University of Hong Kong
- Michael Ng, University of Hong Kong
- Jinchao Xu, Pennsylvania State University
- Tiejong Zeng, The Chinese University of Hong Kong
- Jun Zou, The Chinese University of Hong Kong

### Plenary Presentations

- *Local Multiscale Model Reduction and Applications*, Eric Chung (The Chinese University of Hong Kong, Hong Kong SAR)
- *Robust Solvers for Time-Harmonic Wave Propagation Problems*, Victorita Dolean (Université Côte d'Azur, France and Strathclyde University, Scotland)
- *Improving Efficiency of Scalable TFETI/BETI Contact Solvers for Huge Problems*, Zdeněk Dostál (Technical University of Ostrava, Czech Republic)
- *An Efficient and High Order Accurate Direct Solution Technique for Variable Coefficient Elliptic Partial Differential Equations*, Adrianna Gillman (University of Colorado, Boulder, USA)
- *Fundamental Coarse Space Components for Schwarz Methods with Cross-points*, Laurence Halpern (Université Paris 13, France)
- *Domain Decomposition Methods for Time Harmonic Wave Propagation Problems*, Patrick Joly (ENSTA ParisTech, France)
- *Multilevel Strategies for Non-Linear Problems and Machine Learning: On Non-Linear Preconditioning, Multilevel Optimization, and Multilevel Training*, Rolf Krause (University of Lugano, Switzerland)
- *Adaptive Space-Time Finite Element and Isogeometric Analysis*, Ulrich Langer (Johannes Kepler University Linz, Austria)
- *From Differential Equations to Deep Learning for Image Processing*, Carola-Bibiane Schönlieb (University of Cambridge, UK)
- *Nonoverlapping Domain Decomposition Methods for Saddle Point Problems*, Xuemin Tu (University of Kansas, USA)
- *Domain Decomposition for Modeling Two-Phase Flow in Porous Media*, Mary Wheeler (University of Texas at Austin, USA)
- *General Convection-Diffusion Problems: Robust Discretizations, Fast Solvers and Applications*, Shuonan Wu (Peking University, China)

## **Acknowledgments**

The organizers would like to thank all the participants for their enthusiasm and carefully prepared contributions that made this meeting a very successful event. A warm thanks also to our sponsors that made the budget come together. We have all experienced a very unique meeting, which was held virtually.

# Contents

## Part I Plenary Talks (PT)

<b>Multiscale Model Reduction for a Class of Optimal Control Problems with Highly Oscillating Coefficients</b> . . . . .	3
Tak Shing Au Yeung and Eric Chung	
<b>Several Ways to Achieve Robustness When Solving Wave Propagation Problems</b> . . . . .	17
Niall Bootland, Victorita Dolean, Pierre Jolivet, Frédéric Nataf, Stéphane Operto, and Pierre-Henri Tournier	
<b>Scalable Hybrid TFETI-DP Methods for Large Boundary Variational Inequalities</b> . . . . .	29
Zdeněk Dostál, Tomáš Brzobohatý, David Horák, Jakub Kružík and Oldřich Vlach	
<b>Fundamental Coarse Space Components for Schwarz Methods with Crosspoints</b> . . . . .	41
François Cuvelier, Martin J. Gander, and Laurence Halpern	
<b>Nonoverlapping Domain Decomposition Methods for Time Harmonic Wave Problems</b> . . . . .	53
Xavier Claeys, Francis Collino, Patrick Joly, and Emile Parolin	
<b>Quantitative Analysis of Nonlinear Multifidelity Optimization for Inverse Electrophysiology</b> . . . . .	67
Fateme Chegini, Alena Kopaničáková, Martin Weiser, Rolf Krause	
<b>Adaptive Space-Time Finite Element and Isogeometric Analysis</b> . . . . .	79
Ulrich Langer	

<b>Nonoverlapping Domain Decomposition Methods for Saddle Point Problems</b> . . . . .	91
Jing Li and Xuemin Tu	
<b>Local Residual Minimization Smoothing for Improving Convergence Behavior of a Space-Time Domain Decomposition Method</b> . . . . .	103
Hanyu Li and Mary F. Wheeler	
<b>Part II Talks in Minisymposia</b>	
<b>GenEO Coarse Spaces for Heterogeneous Indefinite Elliptic Problems</b> . . .	117
Niall Bootland, Victorita Dolean, Ivan G. Graham, Chupeng Ma, and Robert Scheichl	
<b>Inexact Subdomain Solves Using Deflated GMRES for Helmholtz Problems</b> . . . . .	127
N. Bootland, V. Dwarka, P. Jolivet, V. Dolean, and C. Vuik	
<b>Non-Overlapping Domain Decomposition Methods with Cross-Points and Padé Approximants for the Helmholtz Equation</b> . . . . .	137
Yassine Boubendir and Tadanaga Takahashi	
<b>OSDS: A Sweeping Preconditioner for the Helmholtz Equation</b> . . . . .	145
Nacime Bouziani and Frédéric Nataf	
<b>Decomposition and Preconditioning of Deep Convolutional Neural Networks for Training Acceleration</b> . . . . .	153
Linyan Gu, Wei Zhang, Jia Liu, and Xiao-Chuan Cai	
<b>Numerical Calculation of the Portal Pressure Gradient of the Human Liver With a Domain Decomposition Method</b> . . . . .	161
Zeng Lin, Bokai Wu, Shanlin Qin, Xinhong Wang, Rongliang Chen, and Xiao-Chuan Cai	
<b>A Parallel Adaptive Finite Element Method for Modeling a Deformable Droplet Travelling in Air</b> . . . . .	169
Li Luo, Xiao-Chuan Cai, and David E. Keyes	
<b>On the Effect of Boundary Conditions on the Scalability of Schwarz Methods</b> . . . . .	177
Gabriele Ciaramella and Luca Mechelli	
<b>On the Asymptotic Optimality of Spectral Coarse Spaces</b> . . . . .	187
Gabriele Ciaramella and Tommaso Vanzan	
<b>Discrete Analysis of Schwarz Waveform Relaxation for a Simplified Air-Sea Coupling Problem with Nonlinear Transmission Conditions</b> . . . .	197
S. Clement, F. Lemarié, and E. Blayo	

**A Posteriori Error Estimates in Maximum Norm for Interior Penalty Discontinuous Galerkin Approximation of the Obstacle Problem** . . . . . 205  
 B. Ayuso de Dios, T. Gudi, and K. Porwal

**Spectral Equivalence Properties of Higher-Order Tensor Product Finite Elements** . . . . . 213  
 Clark R. Dohrmann

**Optimizing Transmission Conditions for Multiple Subdomains in the Magnetotelluric Approximation of Maxwell’s Equations** . . . . . 221  
 V. Dolean, M.J. Gander, and A. Kyriakis

**Non-overlapping Spectral Additive Schwarz Methods for HDG and Multiscale Discretizations** . . . . . 229  
 Yi Yu, Maksymilian Dryja, and Marcus Sarkis

**Robust BPX Solver for Cahn–Hilliard Equations** . . . . . 239  
 Siamak Faal, Adam Powell, and Marcus Sarkis

**Natural Factor Based Solvers** . . . . . 247  
 Juan Galvis, Marcus Sarkis, and O. Andrés Cuervo

**A Simple Finite Difference Discretization for Ventcell Transmission Conditions at Cross Points** . . . . . 257  
 Martin J. Gander and Laurence Halpern

**Cycles in Newton–Raphson Preconditioned by Schwarz (ASPIN and Its Cousins)** . . . . . 265  
 Conor McCoid and Martin J. Gander

**Should Multilevel Methods for Discontinuous Galerkin Discretizations Use Discontinuous Interpolation Operators?** . . . . . 273  
 José Pablo Lucero Lorca and Martin J. Gander

**Domain Decomposition in Shallow Water Modelling of Dutch Lakes for Multiple Applications** . . . . . 281  
 Menno Genseberger, Asako Fujisaki, Christophe Thiange, Carlijn Eijsberg - Bak, Arnout Bijlsma, and Pascal Boderie

**A Variational Interpretation of Restricted Additive Schwarz With Impedance Transmission Condition for the Helmholtz Problem** . . . . . 291  
 Shihua Gong, Martin J. Gander, Ivan G. Graham, and Euan A. Spence

**Application of Multilevel BDDC to the Problem of Pressure in Simulations of Incompressible Flow** . . . . . 299  
 Martin Hanek and Jakub Šístek

<b>Predicting the Geometric Location of Critical Edges in Adaptive GDSW Overlapping Domain Decomposition Methods Using Deep Learning . . . .</b>	<b>307</b>
Alexander Heinlein, Axel Klawonn, Martin Lanser, and Janine Weber	
<b>Optimized Coupling Conditions for Discrete Fracture Matrix Models . . .</b>	<b>317</b>
Martin J. Gander, Julian Hennicker, and Roland Masson	
<b>Efficient Monolithic Solvers for Fluid-Structure Interaction Applied to Flapping Membranes . . . . .</b>	<b>327</b>
D. Jodlbauer, U. Langer, and T. Wick	
<b>Adaptive Nonlinear Elimination in Nonlinear FETI-DP Methods . . . . .</b>	<b>337</b>
Axel Klawonn, Martin Lanser, and Matthias Uran	
<b>Globalization of Nonlinear FETI-DP Methods . . . . .</b>	<b>347</b>
S. Köhler and O. Rheinbach	
<b>A Multilevel Active-Set Trust-Region (MASTR) Method for Bound Constrained Minimization . . . . .</b>	<b>355</b>
Alena Kopaničáková and Rolf Krause	
<b>A Multigrid Preconditioner for Jacobian-free Newton-Krylov Methods . .</b>	<b>365</b>
Hardik Kothari, Alena Kopaničáková, and Rolf Krause	
<b>Overlapping DDFV Schwarz Algorithms on Non-Matching Grids . . . . .</b>	<b>373</b>
Martin J. Gander, Laurence Halpern, Florence Hubert, and Stella Krell	
<b>On the Nonlinear Dirichlet-Neumann Method and Preconditioner for Newton's Method . . . . .</b>	<b>381</b>
F. Chaouqui, M. J. Gander, P. M. Kumbhar, and T. Vanzan	
<b>A Nonlinear Optimized Schwarz Preconditioner for Elliptic Optimal Control Problems . . . . .</b>	<b>391</b>
Gabriele Ciaramella, Felix Kwok, and Georg Müller	
<b>SParse Approximate Inverse (SPAI) Based Transmission Conditions for Optimized Algebraic Schwarz Methods . . . . .</b>	<b>399</b>
Martin J. Gander, Lahcen Laayouni, and Daniel B. Szyld	
<b>A Parareal Architecture for Very Deep Convolutional Neural Networks . .</b>	<b>407</b>
Chang-Ock Lee, Youngkyu Lee, and Jongho Park	
<b>Construction of 4D Simplex Space-Time Meshes for Local Bisection Schemes . . . . .</b>	<b>417</b>
David Lenz	
<b>Coefficient-Robust A Posteriori Error Estimation for H(curl)-elliptic Problems . . . . .</b>	<b>425</b>
Yuwen Li
