About the Authors

Co-authors Laurie J. Bonnici and Brian C. O'Connor are professors of information science, University of Alabama and University of North Texas, respectively. They are academic descendants of pioneering information philosopher, Patrick Wilson of U. C. Berkeley, School of Library and Information Studies. Their work weaves O'Connor's visual information approaches with Bonnici's language analysis to examine the information at the edges. They enjoy kayaking and exploring coffee houses while navigating wherever they may be. Toronto provided fertile ground for conceiving the notion of anecdotal and proximity in information experiences.
