Preface

The number of people worldwide forced to flee their homes due to conflict, violence, disaster risk, and environmental degradation driven by climate change is on the rise. These displacement situations are also becoming more protracted, with many lasting several years or slowly turning to a permanent form of relocation.

Forced displacement has become a significant development and humanitarian challenge. There is an urgent need to develop more sustainable and resilient approaches that can better support displaced communities and ensure a long-term prospect for such a population. But the picture is not complete without including the host communities and the kind of support they also need. Forcible displacement often results in resettle in areas that are already facing their own development challenges, which can lead to tensions between the two communities.

Sustainable and resilient approaches for rebuilding displaced and host communities go beyond addressing physical needs, including housing, safe drinking water, sanitary facilities, electricity, and transport infrastructure. The displaced have lost assets and livelihoods, and are unable to plan for the future. For some communities, such as those involved with fisheries or agriculture, land or place is both a livelihood and a strong sense of identity. No access to grazing land means indigenous people are deprived of a livelihood and a loss of local identity. No access to livelihood creates unemployment and fewer economic opportunities. This can lead to marginalisation, poverty, and further far reaching and more severe consequences such as human trafficking when vulnerable populations are exploited. Providing access to previous livelihoods or creating new economic opportunities give displaced people the opportunity for financial independence. This also helps to avoid tensions with host communities, who often view immigrants as a threat to their livelihoods or a drain on local resources.

Effective planning of settlements can help to ensure that displaced communities have access to education and training opportunities. It is crucial that new arrivals gain employability skills and match their vocational and professional qualifications with those of the host country. Access to quality language training programmes is also essential, along with orientation to help them integrate, such as financial support,

housing, rights and responsibilities, employment, culture, politics, and available services and facilities.

There is an emerging discourse on the best approaches for rebuilding displaced and host communities. This recognises that sustainable and resilient approaches for rebuilding must go beyond physical aspects. Broader needs must be addressed, including sociocultural, institutional, human capital, livelihood, and economic perspectives. There is also a need to promote social cohesion between displaced and host communities.

This book contributes to this discourse. The chapters of this book are primarily drawn from contributions made to the online International Symposium on Rebuilding Communities After Displacement, held on 13 and 14 December 2021 (<http://regardproject.com/portal/index.php/events/research-symposium>). The symposium invited leading scientists around the world to share their knowledge and experience. The event was jointly organised by:

- Division of Risk Management and Societal Safety, Lund University, Sweden.
- Global Disaster Resilience Centre, University of Huddersfield, UK.
- Centre for Sustainable Transitions (CST), University of Central Lancashire, UK.
- Building Lifecycle Research Group, Tallinn University of Technology, Estonia.
- Social Policy Analysis and Research Centre (SPARC), University of Colombo, Sri Lanka.

The symposium encouraged debate and discussion on how a holistic approach to the built environment can help address the challenges associated with displacement. This included effective policies and methods for rebuilding communities and integrating newcomers after forced displacement. It also promoted knowledge-sharing among the research community and practitioners in the field and encouraged multi-disciplinary and multi-sectoral interaction.

Authors of selected high-quality research articles presented at the symposium were invited to contribute to this book volume, which addresses five themes associated with displacement.

- Understanding and managing for better response provision for displaced communities.
- Governance of displacement, and efforts to prevent and respond to internal displacement.
- Economic and policy interventions for sustainable resettlement.
- Resilience and environmental consideration of resettlement planning.
- Social cohesion between displaced and host communities.

In reflecting upon these themes, this book brings together a collection of empirical research, case studies, discussion, and insights on sustainable and resilient approaches to rebuilding displaced communities.

As Editors, we hope that this important collection of scientific results will provide a valuable point of reference, reflecting our progress to date in tackling the development challenges associated with forced displacement.

Contents

Part I Response Management for Displaced Communities

1 Rebuilding After Displacement: Identifying the Needs of Displaced Communities from the Perspective of the Built Environment	3
Andrew Carmichael, Champika Lasanthi Liyanage, Felix Villalba-Romero, Temi Oni-Jimoh, and Chathuranganee Jayakody	
2 Micro-narratives on People's Perception of Climate Change and Its Impact on Their Livelihood and Migration: Voices from the Indigenous Aymara People in the Bolivian Andes	29
Ximena Flores-Palacios, Bayes Ahmed, and Cloe Barbera	
3 From Zero to Hero? Changes in the Estonian Context for Refugees	59
Emlyn Witt, Jane Liise Nurk, and Irene Lill	
4 Challenges of Resilience Building Among Traditional Agricultural Communities Displaced by the Landslides	79
B. M. R. L. Basnayake, D. A. M. De Silva, and S. K. Gunatilake	
5 Displaced Fishermen Off the Coast: Impact of Multiple Hazards on Life Above the Water	95
Achini M. De Silva, Minura Sandamith, Isuru Wicramarthne, B. M. R. L. Basnayake, Janaranjana Ekanayake, K. B. Seenapatabendige, and S. K. Gunatilake	
6 Drivers of Slow-Onset Displacement in the Coastal Mid-Atlantic Region and Preferences for Receiving Locations	121
Anamaria Bukvic and Christopher W. Zobel	

7	Living with Landslide Risks: A Case of Resistance to Relocation Among Vulnerable Households Residing in the Kegalle District of Sri Lanka	145
	K. L. W. I. Gunathilake, P. P. G. Jayathilake, Nishara Fernando, Naduni Jayasinghe, Dilanthi Amaratunga, and Richard Haigh	
8	Internal Displacement in Nigeria: What Are the Preventive Measures?	165
	Lilian Nwanyisonde Smart, Dilanthi Amaratunga, and Richard Haigh	
 Part II The Built Environment in Resettlement Planning		
9	An Architectural Analysis of Tsunami Re-settlement Villages of South of Sri Lanka	193
	K. B. Seenapatabendige and Achini M. De Silva	
10	Forced Displacement Following Reconstruction Approaches After 2005 Zarand Earthquake, Iran	217
	Azadeh Shojaei and Alireza Fallahi	
11	Disaster-Induced Relocation of Vulnerable Households: Evidence from Planned Relocation in Sri Lanka	245
	Nishara Fernando and Naduni Jayasinghe	
12	How are Tamil Villages Reconstructed? Ethnography of Place-Making in Post-war Reconstruction in Sri Lanka	269
	Pathmanesan Sanmugeswaran	
 Part III Governance of Displacement		
13	Reproducing Vulnerabilities Through Forced Displacement: A Case Study of Flood Victims in Galle District, Sri Lanka	291
	H. Unnathi S. Samaraweera	
14	Verticalized Slums, Governmentality and Pandemic Governance: A Critical Hermeneutical Analysis of Governance Practices in a Selected Urban High-Rise in Colombo, Sri Lanka	313
	Anjali Korala and Veronika Cummings	
15	Policy Recommendations for Built Environment Professional Bodies in Upgrading Their Professional Competencies to Address Displacement Contexts	341
	Anuradha Senanayake, Chamindi Malalgoda, Chathurangane Jayakody, Dilanthi Amaratunga, and Richard Haigh	

Part IV Socio-economic Interventions for Sustainable Resettlement

- 16 Socio-Economic Effects of War Against Terror-Induced Displacement on Host Communities in District Kohat, Pakistan ... 365**
 Shakeel Mahmood, Attia Atiq, Samiullah, and Ahmad Raza Khan
- 17 Social Capital and Community Organizing in Community-Based COVID-19 Management in Two Resettlement Sites in the Philippines 379**
 Melissa Quetulio-Navarra and Anke Niehof
- 18 A Guideline for Host Communities in Selecting Effective Livelihood's Interventions for Refugees in an Informal Refugee Resettlement: A Case Study of Chiang Mai Province, Thailand 403**
 Watchara Pechdin and Mokbul Morshed Ahmad
- 19 Changes in Social Capital After the 2011 Great East Japan Earthquake—Results of an Awareness Survey in Taro District, Miyako City, Iwate Prefecture 421**
 Shinsuke Tanimoto and Masaaki Minami
- 20 The Role of Social Capital as a Post-relocation Coping Mechanism: A Case Study of Kegalle, Sri Lanka 439**
 Anuradha Senanayake, Maduri Fernando, Nishara Fernando, Dilanthi Amaratunga, Richard Haigh, Chamindi Malalgoda, and Chathurangane Jayakody
- 21 Relocated or Displaced? A Social Inquiry of Tsunami-Induced Relocation Programme in Southern Sri Lanka 459**
 Thushara Kamalrathne and Anuradha Senanayake
- 22 Migrants and Resettlement: Mobilising Co-existence Through Social Cohesion 479**
 Shalini Attri

Editors and Contributors

About the Editors

Prof. Mo Hamza is Professor of Risk Management and Societal Safety at Lund University, Sweden. In his career spanning 36 years so far, he has worked with international development organisations including: World Bank, ADB, UNDP, UNISDR, USAID, DfID, IFRC, IUCN, Swedish Red Cross, and the Swedish Civil Contingencies Agency (MSB). His primary areas of professional expertise and research work are: disaster risk and vulnerability reduction, post-disaster recovery, climate change impact and adaptation in fragile and failed states, and environmental displacement. Previously he was Chair of Social Vulnerability Studies at the United Nations University, Bonn, Germany; a Senior Research Fellow at the Stockholm Environment Institute (SEI), Sweden; and an advisor to the MIT Climate CoLab. He has undertaken consultancy and research work in: Afghanistan, Bangladesh, Botswana, Egypt, Eritrea, Ethiopia, India, Indonesia, Jordan, Kyrgyzstan, Liberia, Nigeria, Pakistan, Saudi Arabia, Sierra Leone, Sri Lanka, Sudan, Uganda, UK, South Eastern Europe, and the Balkan States. He is currently an advisor to the Swedish Civil Contingencies Agency (MSB) where he is responsible for their capacity development processes. Among various and more recent publications, Mo Hamza was the co-guest editor of a double special issue in *Global Discourse Journal* (2022) “Critical Exploration of Crisis: Politics, Precariousness and Potentialities”, and the author of “Refugees’ Integration in the Built Environment—The Sweden Case” in *Sustainability Journal* 2021. He was also the lead author and editor of the World Disasters Report (2015) “Focus on local actors, the key to humanitarian effectiveness”. He can be contacted on: mo.hamza@risk.lth.se.

Prof. Dilanthi Amaratunga is a leading international expert in disaster resilience with an extensive academic career that has a strong commitment to encouraging colleagues and students to fulfil their full potential. Currently she is leading University of Huddersfield, UK’s Global Disaster Resilience Centre. She is recognised for

her career-long impact up until 2020, and is placed among the global top 2% of influential scientists, according to the report of “Composite Citation Metrics” by Elsevier BV Netherlands and Stanford University, USA, released in August 2021. She has project managed to successful completion a large number of international research projects (over £ 20 million) generating significant research outputs and outcomes. She provides expert advice on disaster resilience to national and local governments and international agencies including the UNDRR. To date, she has produced over 500 publications, refereed papers, and reports and has made over 100 keynote speeches in around 40 countries. Among many leadership roles, she is the joint chief editor of the *International Journal of Disaster Resilience in the Built Environment*. She is a member of the European Commission and UNDRR’s European Science and Technology Advisory Group (ESTAG) representing the UK, a Steering Committee member of the UK Frontiers of Development programme, a Steering Committee member of the UK Alliance for Disaster Research, motivation of which is to bring together the UK’s rich and diverse disaster research community to facilitate collaboration and partnership. She is a Fellow of the Royal Institution of Chartered Surveyors (RICS), a Fellow of The Royal Geographical Society, and a Fellow and a Chartered Manager of the Chartered Management Institute, UK. Further details are viable here: www.dilanthiamaratunga.net.

Prof. Richard Haigh is Professor of Disaster Resilience and Co-director of the University of Huddersfield’s Global Disaster Resilience Centre in the UK. His research interests include multi-hazard early warning, disaster risk governance and resilience in the built environment. He is the Editor-in-Chief of the *International Journal of Disaster Resilience in the Built Environment* and Co-Chair of the International Conferences on Building Resilience, which started in 2008. He is an expert member of Working Group 1 of Intergovernmental Coordination Group on the Indian Ocean Tsunami Warning and Mitigation System (ICG/IOTWMS). Richard and his team won the Newton Prize for Indonesia, celebrating best research innovation partnership for the project Mainstreaming Integrated Disaster Risk Reduction and Climate Change Adaption Strategies into Coastal Urban Agglomeration Policy. He has led and successfully delivered research grants funded by the UK Natural Environment Research Council, the European Commission’s Horizon 2020, Erasmus+, Framework Seven Programme, Lifelong Learning, Asia Link and European Social Fund, the UK Newton Fund, the UK Foreign and Commonwealth Office, British Council, and UK Parliamentary under Secretary of State for Business, Energy and Industrial Strategy. Many of these projects were carried out in close collaboration with government, non-government organisations, and industry partners. He has published widely, including an edited book by Wiley Blackwell, 15 edited book chapters, and 45 peer-reviewed journal articles, the majority of which are in ISI or SCOPUS indexed journals. He has delivered over 80 invited speeches and keynote presentations for audiences in 25 countries across North America, South America, Europe, Asia, Africa, and Australasia.

Dr. Chamindi Malalgoda is a senior lecturer and the quantity surveying course leader at the Department of Design and Built Environment, School of Arts and Humanities, University of Huddersfield, UK. She is also a member of the Global Disaster Resilience Centre (GDRC) of the University. Chamindi's research interest includes disaster risk reduction and resilience in the built environment. Chamindi completed her Ph.D. in 2014 in the theme of empowering local governments in making cities resilient to disasters and is currently managing several European funded research projects related to disaster resilience and management. She has led and successfully delivered research grants funded by the Erasmus plus programme under Strategic Partnerships and International Credit Mobility including REGARD (Rebuilding after displacement) project which was completed in March 2022. She has contributed to over 40 publications, which include refereed journals, conference papers, and various high-impact reports. She is also a reviewer of a number of international journals in the fields of disaster resilience, construction, and property management and recently guest edited a special issue on "Rebuilding Communities Following Disasters and Conflict Induced Mass Displacements" in the *Sustainability Journal*. For further information, see <https://pure.hud.ac.uk/en/persons/chamindi-malalgoda>.

Dr. Chathuraganee Jayakody is a Senior Tutor in Planning and Environmental Management at the School of Environment Education and Development (SEED), Faculty of Humanities, The University of Manchester. Her role includes teaching in the areas of urban planning, neighbourhood planning, infrastructure planning and supervising master's dissertations in planning, urban design, global urban development, and urban regeneration and development. Before joining the University of Manchester, she was a post-doctoral researcher at the University of Huddersfield and a research member of the Global Disaster Resilience Centre. She is also a part-time tutor at School of Architecture, Manchester Metropolitan University. She has worked in the Planning Control and Building Control Department at Bolton Metropolitan Borough Council. She completed her Ph.D. in "Architecture and the Built Environment" at the University of Huddersfield, and she did her master's degree in urban design at the University of Salford. Her current research interest is in the areas of built environment perspective of displacement, planning and designing sustainable shared spaces and public open spaces, urban planning, and urban designing interventions for disaster resilience.

Ms. Anuradha Senanayake is a Ph.D. researcher at the Global Disaster Resilience Centre, University of Huddersfield, UK. By profession she is a lecturer attached to the Department of Sociology, University of Colombo, Sri Lanka, and an Attorney-at-Law at the Supreme Court of Sri Lanka. She is actively involved in youth advocacy and volunteerism in the Rotary District 3220 Sri Lanka and Maldives, where she held the position of Rotaract Country Representative from 2017 to 2018. She completed her M.Phil. under the theme "The Role of Governance in Relocation Disaster Risk Reduction Strategy" at the University of Colombo, Sri Lanka. She also

holds an LLM in “International Human Rights” from Birmingham City University, UK. Her research interests lie in the areas of displacement and relocation, disaster risk governance, disaster justice, urban sociology, sociology of law, and sociology of medicine.

Part I
Response Management for Displaced
Communities

Chapter 1

Rebuilding After Displacement: Identifying the Needs of Displaced Communities from the Perspective of the Built Environment

Andrew Carmichael, Champika Lasanthi Liyanage, Felix Villalba-Romero, Temi Oni-Jimoh, and Chathurangane Jayakody

Abstract The United Nations Refugee Agency (UNHCR)’s submission on the inadequacies of policies imposed by certain international initiatives strongly confirms the need to focus on built environment programmes when rebuilding displaced communities. This chapter identifies the needs of internationally displaced communities in the United Kingdom (UK) within the past decade (2009–2019), in the context of the built environment. This will assist in their progress towards successful resettlement and integration. The chapter is based on the findings of qualitative analysis of interviews with experts working with the displaced in the UK. The interviewees were from different groups responsible for managing different aspects of the refugee experience. Research results reveal that the UK government’s standards vary across the range of different categories of displaced persons. This creates a deprived group within the displaced communities with numerous needs. Some of these are built environment-related needs that should be met to enable successful integration into the UK.

Keywords Built environment (BE) • Displaced communities (DC) • Integration • Resettlement • UK

1.1 Introduction

In recent times, the world has witnessed an increase in mass displacement of communities from one geographical area to another, due to the rise in armed conflicts

and disasters caused by climate change. The United Nations High Commissioner for Refugees (UNHCR) highlights that there is a dearth of built environment policies within international initiatives to help resettlement of displaced communities (UNHCR 2018). Thus, there is a need to include a mission of rebuilding communities after displacement with particular focus on the built environment. In the 1951 Refugee Convention (UNHCR 2010), the rights of the displaced were ratified by 145 states including the United Kingdom (UK). This included the obligation to protect refugees within their borders, in accordance with the terms of the convention, and ensure their resettlement and integration.

While the UK has hosted many immigrants during its history, it has supplied even more migrants to the world, only registering a higher net number of arrivals from the mid-1980s (DEMIG 2015). These included asylum seekers with a well-founded fear of persecution, and it was beholden on the country to be responsible for their welfare in line with their international commitments. Asylum seekers are those people who have left their country of origin and formally applied for asylum and protection, but whose application is yet to be concluded. Currently, most of these people are settled in London and the South-East by the government's dispersal programme. There is then a period of waiting for them until a decision has been made concerning their asylum claims. Those whose claims have been successful become refugees, a legal recognition of their status. Until such time, however, the lives of asylum seekers appear on hold in the UK, as they are not permitted to work, study, or volunteer until their claim has been granted (Mahamed 2016; Mayblin and James 2019).

1.1.1 Resettlement and Integration of the Displaced Communities in the UK

Resettlement of a displaced person in the UK depends on the path through which the displaced person enters the country. This study identifies and concurs with Mahamed (2016) that there are two routes (Fig. 1.1) to becoming refugees in the UK; the resettlement channel and the asylum channel. The key difference in the application process is the origin of the request, either external, before arriving in the UK (resettlement) or on arrival in the UK (asylum). This research observes this as a significant factor, with implications for the current experience of both types of displaced persons.

Notwithstanding the route chosen, there is a desire for integration of displaced persons with their host communities. Integration, enabling the displaced person to live harmoniously with their host communities, is considered a two-way process, thereby placing demands on both the incoming and host communities (ECRE 2005). In the year 2000, the UK's Labour government established an integration policy which expressed a wish to make refugees aware of the provisions available to them; assist them in gaining access to these provisions, such as housing, employment, and

Fig. 1.1 Two routes to resettlement of displaced persons in the UK

English language services; enable them to realise their potential as equal members of the society; and motivate them for community participation (Broadhead and Spencer 2020). Yet two decades, and various changes of government, since this policy, there remain some attendant barriers to resettlement with most displaced persons in dire need of fundamental daily provision (Mayblin and James 2019; Fitzpatrick et al. 2016). Moreover, more recent work (Hamza 2021) notes that scholars question the success of such policy in the face of these challenges and highlights the trauma faced by displaced persons and the perception of them as either a threat, burden, or both, by the host population. This chapter in identifying the extent of the needs of displaced persons, and the experience of all parties engaged in the provision of those needs, advances the debate on the success of policy initiatives and where redress may be made.

1.2 Methodology

Data collection utilised both primary and secondary sources of data. Initially, secondary data collection, comprising of a broad literature review of existing publications, was undertaken. This was conducted using both searches of the Scopus database using relevant keywords to identify academic literature and more general web-based

and citation searches for government publications, and publications of both national and international organisations. This provided an in-depth understanding of what is known and unknown about resettling the displaced and allowed for coding and thematic analysis in accordance with established techniques (Miles and Huberman 1994; Saldana 2013). The identification of themes assisted in structuring the primary sources of data collection.

Primary sources of data collection utilised the qualitative approach drawn from the constructivist paradigm (Allen 1994). Primary data collection was carried out using semi-structured interviews where participants were asked to respond to open-ended questions. This offered opportunity to examine how they interpreted the question and allowed them to be expansive with their provision of information. Participants were recruited using purposive sampling, a rational and effective method when wanting information-rich data (Patton 1990). The sampling focused on people in organisations that work with displaced communities because it is not only difficult in the UK to approach groups of displaced persons directly, but it may also be undesirable to subject them to additional interviews given their experiences and psychological status. Interviews were transcribed and the findings again analysed, coded, and themes identified.

Twelve interviewees (identified as UK INT followed by their number in the interviewing stage) were drawn from six different types of organisations: national government, local authorities, voluntary organisations/NGOs (international), voluntary organisations/NGOs (local), academia, and displaced persons representatives. Some of the organisations co-operate with each other towards outcomes, for example, voluntary organisations work with local authorities, which are ultimately funded by the national government. Hence, an interviewee might be recognised as a stakeholder with more than one organisation (Fig. 1.2). Of the twelve interviewees, seven are described as working with voluntary organisations (6 local and 1 international). Six interviewees work with local authorities, four of them being included in the national government category as well due to the funding of their activities, with the other two also belonging to the voluntary organisation category. Two interviewees are purely focused on research work, while two more are displaced persons themselves and additionally work with voluntary organisations.

The interviewees were acknowledged as working with effectively three (although officially four) different types of displaced persons. Initial asylum seekers arriving in the UK are one group. Those who have been processed through the resettlement channel a second, and the third is those persons who have been in the asylum channel (which includes unaccompanied asylum-seeking children). Five of the interviewees (UK INT 1, 3, 7, 9, and 12), work with all these different types of displaced persons, while another three (UK INT 2, 4, and 5) work with three of them (Fig. 1.3). Two further interviewees (UK INT 10 and 11) are dedicated to working with the resettlement group, while the final two (UK INT 6 and 8) work with internally displaced persons. This latter type of displaced person lies beyond the scope of this research, but awareness of which provides interviewees with an understanding of community
