- Series Page
- Title Page
- Copyright Page
- Authors’ Biography
- Foreword
- Preface
- Acknowledgments
- 1 What Is Smart City?
  - 1.1 Introduction
  - 1.2 Characteristics, Functions, and Applications
  - 1.3 Smart Energy
  - 1.4 Smart Transportation
  - 1.5 Smart Health
  - 1.6 Impact of COVID-19 Pandemic
  - 1.7 Standards
  - 1.8 Challenges and Opportunities
  - 1.9 Conclusions
  - Acknowledgements
  - References
- 2 Lithium-Ion Storage Financial Model
  - 2.1 Introduction
  - 2.2 Literature Review
  - 2.3 Research Background: Hybrid Energy System in Kenya

2.4 A Case Study on the Degradation Effect on LCOE
2.5 Financial Modeling for EES
2.6 Case Studies on Financing EES in Kenya
2.7 Sensitivity Analysis of Technical and Economic Parameters
2.8 Discussion and Future Work
2.9 Conclusions
Acknowledgments
References
3 Levelized Cost of Electricity for Photovoltaic with Energy Storage
Nomenclature
3.1 Introduction
3.2 Literature Review
3.3 Data Analysis and Operating Regime
3.4 Economic Analysis
3.5 Conclusions
Acknowledgment
References
4 Electricity Plan Recommender System
Nomenclature
4.1 Introduction
4.2 Proposed Matrix Recovery Methods
4.3 Proposed Electricity Plan Recommender System
4.4 Simulations and Discussions
4.5 Conclusion and Future Work
Acknowledgments
References

5 Classifier Economics of Semi-intrusive Load Monitoring
- 5.1 Introduction
- 5.2 Typical Feature Space of SILM
- 5.3 Modeling of SILM Classifier Network
- 5.4 Classifier Locating Optimization with Ensuring on Accuracy and Classifier Economics
- 5.5 Numerical Study
- 5.6 Conclusion
- Acknowledgements
- References

6 Residential Demand Response Shifting Boundary
- 6.1 Introduction
- 6.2 Residential Customer Behavior Modeling
- 6.3 Residential Customer Shifting Boundary
- 6.4 Case Study
- 6.5 Case Study on Residential Customer TOU Time Zone Planning
- 6.6 Case Study on Smart Meter Installation Scale Analysis
- 6.7 Conclusions and Future Work
- Acknowledgements
- References

7 Residential PV Panels Planning-Based Game-Theoretic Method
- Nomenclature
- 7.1 Introduction
- 7.2 System Modeling
- 7.3 Bi-level Energy Sharing Model for Determining Optimal PV Panels Installation Capacity

7.4 Stochastic Optimal PV Panels Allocation in the Coalition of Prosumer Agents
7.5 Numerical Results
7.6 Conclusion
Acknowledgements
References
8 Networked Microgrids Energy Management Under High Renewable Penetration
Nomenclature
8.1 Introduction
8.2 Problem Description
8.3 Components Modeling
8.4 Proposed Two-Stage Operation Model
8.5 Case Studies
8.6 Conclusions
Acknowledgements
References
9 A Multi-agent Reinforcement Learning for Home Energy Management
Nomenclature
9.1 Introduction
9.2 Problem Modeling
9.3 Proposed Data-Driven-Based Solution Method
9.4 Test Results
9.5 Conclusion
Acknowledgements
References
10 Virtual Energy Storage Systems Smart Coordination
10.1 Introduction

10.2 VESS Modeling, Aggregation, and Coordination Strategy
10.3 Proposed Approach for Network Loading and Voltage Management by VESSs
10.4 Case Studies
10.5 Conclusions and Future Work
Acknowledgements
References
11 Reliability Modeling and Assessment of Cyber-Physical Power Systems
Nomenclature
11.1 Introduction
11.2 Composite Markov Model
11.3 Linear Programming Model for Maximum Flow
11.4 Reliability Analysis Method
11.5 Case Analysis
11.6 Conclusion
Acknowledgements
References
12 A Vehicle-To-Grid Voltage Support Co-simulation Platform
12.1 Introduction
12.2 Related Works
12.3 Direct-Execution Simulation
12.4 Co-Simulation Platform for Agent-Based Smart Grid Applications
12.5 Agent-Based FLISR Case Study
12.6 Simulation Results
12.7 Case Study on V2G for Voltage Support

12.8 Conclusions
Acknowledgements
References
13 Advanced Metering Infrastructure for Electric Vehicle Charging
13.1 Introduction
13.2 EVAMI Overview
13.3 System Architecture, Protocol Design, and Implementation
13.4 Performance Evaluation
13.5 Conclusion
Acknowledgements
References
14 Power System Dispatching with Plug-In Hybrid Electric Vehicles
Nomenclature
14.1 Introduction
14.2 Framework of PHEVs Dispatching
14.3 Framework for the Two-Stage Model
14.4 The Charging and Discharging Mode
14.5 The Optimal Dispatching Model with PHEVs
14.6 Numerical Examples
14.7 Practical Application – The Impact of Electric Vehicles on Distribution Network
14.8 Conclusions
Acknowledgements
