Preface	xvii
1 Oil and Fats as Raw Materials for Industry: An Introduction	1
<i>Sonali Kesarwani, Mukul Kumar, Divya Bajpai Tripathy, Anjali Gupta and Suneet Kumar</i>	
1.1 Introduction	2
1.2 Classification of Oils and Fats	4
1.2.1 Long-Chain Fatty Acid	5
1.2.1.1 Long-Chain Saturated Fatty Acid	5
1.2.1.2 Unsaturated Fatty Acid	6
1.2.1.3 Cis-Unsaturated Fatty Acid	7
1.2.1.4 Trans-Unsaturated Fatty Acid	7
1.2.2 Medium-Chain Fatty Acid	8
1.2.2.1 Lauric Acid (12 Carbon Atoms)	8
1.2.2.2 Capric Acid (10 Carbon Atoms)	9
1.2.2.3 Caprylic Acid (8 Carbon Atoms)	9
1.2.3 Short-Chain Fatty Acids	9
1.2.3.1 Butyric Acid (4 Carbon Atoms)	10
1.2.3.2 Propionic Acid (3 Carbon Atoms)	10
1.2.3.3 Acetic Acid (2 Carbon Atoms)	10
1.3 Chronology of the Development of Oil and Fats for Industry	11
1.4 Chemistry of Oil and Fats	14
1.5 Properties of Oils and Fats	15
1.5.1 Physical Properties	16
1.5.2 Chemical Properties	16
1.6 Applications of Oils and Fats	18
1.6.1 Oils and Fats in Surfactants Industry	18
1.6.2 Oils and Fats in Food Industry	18
1.6.3 Oils and Fats in Pharmaceuticals	19
1.6.4 Oils and Fats in Cosmetics	19

1.6.5	Oils and Fats in Agriculture (Pesticide/Herbicide Adjuvants)	20
1.6.6	Oils and Fats as Biodiesel	20
1.6.7	Oils and Fats in Coating and Polymers	21
1.6.8	Oils and Fats in Lubricants	21
1.7	Challenges	21
1.7.1	The Challenge for Trans-Fatty-Acids	21
1.8	Conclusion	24
	References	24
2	Biotechnology for Oil and Fat	33
	<i>Nabya Nehal and Priyanka Singh</i>	
2.1	Introduction	34
2.2	Review of Literature	36
2.2.1	Development of Dietary Fats and Vegetable Oils	36
2.2.2	Classification of Fatty Acids	37
2.2.2.1	Saturated Fatty Acids (SFA)	38
2.2.2.2	Unsaturated Fatty Acid	38
2.2.3	Sources of Dietary Fats	41
2.2.3.1	Microorganisms as Source of Lipids	41
2.2.3.2	Conventional Oilseeds as Source of Dietary Fats	41
2.2.3.3	Unconventional Oilseeds as Source of Dietary Dats	47
2.2.4	Applications of Fatty Acids	50
2.2.4.1	Fatty Acids can Modulate Inflammation	50
2.2.4.2	Treatment of Neuro-Degenerative Diseases (NDDs)	50
2.2.5	Pretreatments Methodologies for Improving Oil Yield	51
2.2.5.1	Microwave Pretreatment Process	53
2.2.5.2	Biological Pretreatment Techniques	53
2.2.5.3	Genetically Improved Oil Seed Crop	54
2.3	Conclusion	55
	Acknowledgement	55
	References	56
3	Sustainability of Oils and Fats Over Petrochemicals	65
	<i>Swati Chaudhary</i>	
3.1	Oils and Fats as Renewable Feedstock	66
3.1.1	What are Oleochemicals?	66

3.1.2	Classes of Oleochemicals	66
3.1.2.1	Acids	66
3.1.2.2	Esters	67
3.1.2.3	Alcohols	67
3.1.2.4	Fatty Amines	67
3.1.3	Applications of Oleochemicals	67
3.1.3.1	Pharmaceuticals & Nutraceuticals	68
3.1.3.2	Cosmetics	68
3.1.3.3	Lubricants & Greases	68
3.1.3.4	Cleaning	69
3.1.3.5	Food & Beverages	69
3.1.3.6	Coatings & Adhesives	69
3.1.3.7	Personal Aid	69
3.1.3.8	Polymers	69
3.2	Petrochemicals as Non-Renewable Feedstock	70
3.2.1	What are Petrochemicals?	70
3.2.2	Classification of Petrochemicals	70
3.2.2.1	On the Basis of Processing	71
3.2.2.2	On the Basis of Primary Petrochemicals	72
3.2.3	Applications of Petrochemicals	73
3.2.3.1	Preservatives	73
3.2.3.2	Wax	74
3.2.3.3	Detergent	74
3.2.3.4	Dyes	74
3.2.3.5	Plastics	74
3.2.3.6	Ethylene	74
3.2.3.7	Fertilizers	75
3.2.3.8	Synthetic Shoes	75
3.3	Oils and Fats vs. Petrochemicals	75
3.3.1	Comparison of Production	75
3.3.2	Comparison of Processing	75
3.3.3	Comparison of Fuel Efficiency	76
3.3.4	Comparison of Environmental Adaptability	76
3.3.5	Comparison of Sustainability	76
3.4	Trends in the Oleochemical Industry	76
3.5	Oleochemicals & Petrochemicals Surfactants	77
3.5.1	Chemical & Structural Properties	78
3.5.2	Environmental Properties	78
3.5.3	Utilital Properties	78
3.6	Oleochemicals-Based Products	79

3.7	Conclusion	79
	References	80
4	Oils and Fats in the Food Industry	85
	<i>Garima Gupta and Priyanka Singh</i>	
4.1	Introduction	86
4.1.1	Fatty Acids	86
4.1.2	Triacylglycerols	86
4.1.3	Waxes of Ester	86
4.1.4	The Phospholipids	87
4.1.5	Sterols	87
4.1.6	Tocols	87
4.1.7	Hydrocarbons	87
4.2	Sources of Oils and Fats	88
4.2.1	Animal Sources	89
4.2.1.1	Butterfat	89
4.2.1.2	Tallow	90
4.2.2	Oils from Fish	90
4.2.2.1	Cod Liver Oil	90
4.2.3	Vegetable-Oil	90
4.2.3.1	Soybean Oil	90
4.2.3.2	Palm Oil	90
4.2.3.3	Canola Oil	91
4.2.3.4	Sunflower Oil	91
4.2.3.5	Coconut Oil	91
4.2.3.6	Palm Kernel Oil	91
4.2.3.7	Cottonseed Oil	92
4.2.3.8	Groundnut (Peanut) Oil	92
4.3	Methods of Extraction	92
4.3.1	Extraction	92
4.3.2	Refining	92
4.3.3	Degumming	93
4.3.4	Neutralization	94
4.3.5	Bleaching	94
4.3.6	Deodorisation	94
4.3.7	Modification Process	94
4.3.8	Blending	94
4.3.9	Fractionation	95
4.3.10	Hydrogenation	95
4.3.11	Interesterification	95
4.3.12	Chemical Method	95

4.3.13	Enzymatic Method	95
4.4	Constituents of Fat and Oil	96
4.4.1	Triglycerides	96
4.4.2	Mono- and Diglycerides are Two Types of Fatty Acids	96
4.4.3	Saturated and Unsaturated Fatty Acids	97
4.4.3.1	Unsaturated Fatty Acids	97
4.4.3.2	Phosphatides	97
4.4.3.3	Sterols	98
4.4.3.4	Tocopherols and Tocotrienols	98
4.4.3.5	Pigments	98
4.4.3.6	Alcoholic Fatty Acids	98
4.5	Physical Properties	99
4.5.1	Acids Alkanoic and Alkanoic	99
4.5.2	Fat Analysis	99
4.5.3	Content of Oil	100
4.5.4	Saponification	100
4.5.5	Melting Characteristics, Solid Fat Content, and Qualities at Low Temperatures	100
4.5.6	Value of Peroxide, Anisidine, Stability and Shelf Life	101
4.5.7	Gas Chromatography	101
4.5.8	Infrared Spectroscopy and Fourier Transform Infrared	101
4.6	Chemical Characteristics	102
4.6.1	Hydrogenation	102
4.6.2	Oxidation of the Atmosphere	103
4.6.3	Changes in Temperature	103
4.6.4	The Carboxyl/Ester Function's Reactions	104
4.7	Nutritional Properties	104
4.7.1	Suggested Consumption Limits for Fats and Oils	104
4.7.2	Role of Fats in Health and Disease	105
4.7.2.1	Coronary Heart Disease	105
4.7.2.2	High Blood Pressure	105
4.7.2.3	Cancer	105
4.7.2.4	Inflammation	105
4.8	Applications	106
4.8.1	Butter	106
4.8.2	Margarine	106
4.8.3	Baking Fats and Shortenings	106
4.8.4	Frying Oil and Fats	107
4.8.5	Ice Cream	107

4.8.6	Chocolate and Confectionery Fat	108
4.8.7	Cakes	109
4.8.8	Bread	110
4.8.9	Biscuits	111
	References	111

5.1	Introduction	118
5.2	History of Laundry Detergent	118
5.3	Raw Materials in Laundry and Detergents	121
5.4	Types of Surfactants	122
5.4.1	Anionic Surfactants	122
5.4.1.1	Alkylbenzene Sulfonates (ABS)	123
5.4.1.2	Paraffin- or Alkane Sulfonates	123
5.4.2	Cationic Surfactants	125
5.4.2.1	Quaternary Ammonium Compounds	125
5.4.2.2	Imidazolinium Compounds	126
5.4.3	Non-Ionic Surfactants	126
5.4.4	Amphoteric Surfactants	127
5.4.5	Chelating Agents	127
5.4.6	Builders Detergents	128
5.5	Synthesis Methods	128
5.5.1	Synthesis of Methyl Ester Sulfonate Surfactant from Jatropha Oil	131
5.5.2	Synthesis of Non-Ionic Surfactants from Jatropha Oil	131
5.5.3	Synthesis of Anionic Surfactants from Castor, Sal and Thumba Oil	133
5.5.4	Synthesis of Sugar-Based Surfactants from Vegetable Oils	134
5.6	Market Analysis	135
5.7	Environmental Safety	137
5.8	Future Trends	138
5.9	Conclusion	139

9.3.7	Rice Bran Oil as Health Guard Immunity Booster	240
9.4	Soybean Oil	240
9.4.1	Treats Sleep Disorders	241
9.4.2	Manages Diabetes	241
9.4.3	Improves Blood Circulation	241
9.4.4	Essential for Pregnancy	241
9.4.5	Anticancer Properties	241
9.5	Walnut Oil	242
9.5.1	Improves Blood Circulation	242
9.5.2	Lowers Heart Disease Risk	242
9.5.3	Cuts Inflammation	243
9.5.4	Maintains Hormone Levels	243
9.5.5	Improves Skin	243
9.5.6	Prevents Eczema	243
9.5.7	Anti-Aging	243
9.6	Sesame Oil	243
9.6.1	Treats Premature Graying Hair	244
9.6.2	Helps in Rheumatoid Arthritis	244
9.6.3	Lowering Blood Pressure	244
9.6.4	Used in Stress and Depression Condition	244
9.6.5	Sesame Oil Pulling for Improving Oral Health	244

9.6.6	Sesame Oil Skincare Benefits	245
9.6.7	Natural Anti-Inflammatory Agent	245
9.6.8	Benefits for Diabetes Patients	245
9.6.9	Sesame Oil for Anemia	245
9.6.10	Anti-Cancerous Properties	246
9.6.11	Helps in Improving Eye Health	246
9.7	Peanut Oil	246
9.7.1	Used for Body Massage Therapy	246
9.7.2	Helps in Improving Heart Health	247
9.7.3	Peanut Oil Maintains Cholesterol Level	247
9.7.4	Skin Benefits	247
9.7.5	Peanut Oil Helps to Prevent Stomach Problems	247
9.7.6	Aromatherapy by Peanut Oil	247
9.7.7	Provides Skincare	248
9.7.8	For Hair Growth	248
9.7.9	Used as an Antispasmodic	248
9.7.10	Peanut Oil Helps Strengthen the Body	248
9.8	Sunflower Oil	248
9.8.1	Cardiovascular Benefits	249
9.8.2	Helps in Preventing Arthritis	249
9.8.3	Prevention of Colon Cancer and Other Cancers	249
9.8.4	Lowering Cholesterol	249
9.8.5	Body Repairing	250
9.8.6	Sunflower Oil Helps in Preventing Infant Infection	250
9.8.7	Healthy Nervous System	250
9.8.8	Helps in Reducing Cardiac Problems	250
9.8.9	Sunflower Oil for Skin Benefits	250
9.8.10	Anti-Aging Property	251
9.8.11	Controlling Frizzy Hair	251
9.8.12	Anti-Inflammatory Properties	251

Preface

In today's world, oils and fats play a crucial role in various industries and applications. From the food industry to cosmetics, from pharmaceuticals to coating industries, these versatile substances have become indispensable raw materials. With increasing concerns about sustainability and environmental impact, there is a growing need to explore alternative sources and utilize biotechnology to harness the potential of oils and fats. This book is divided into 12 chapters, discussing the potential of oil and fats as raw materials for various industrial sectors.

In chapter 1, fundamentals of oils and fats has been covered. Discussion has been made on their various types, ranging from vegetable oils to animal fats, on their chemistry and properties. Understanding the characteristics of different oils and fats is essential to comprehend their applications across industries.

The second chapter of the book is focuses on the advancements in biotechnology that have revolutionized the production and utilization of oils and fats. We explore the role of biotechnology in enhancing yield, improving quality, and developing sustainable processes. The chapter highlights the potential of genetic engineering, enzyme technology, and other biotechnological tools in the field of oils and fats.

Chapter 3 of the book is based on the sustainability of oils and fats over petrochemicals. This chapter insights the concerns about the environmental impact of petrochemicals rise and examines the sustainability of oils and fats as an alternative. Comparison on the ecological footprint of oils and fats with that of petrochemicals and discuss the advantages and challenges associated with transitioning to renewable sources has been done. The chapter also addresses the importance of sustainable sourcing and production practices.

The fourth chapter explores the extensive use of oils and fats in the food industry. This discusses their role in cooking, flavouring, and texture enhancement, and their impact on product quality. Additionally, the chapter examines the health considerations associated with consuming

different types of oils and fats, shedding light on the ongoing debates surrounding their effects on human health.

Chapter 5 investigates the potential of oils and fats as raw materials for surfactants and laundry detergents. Traditional petrochemical-based surfactants can have adverse environmental effects, and this chapter explores the benefits of utilizing renewable sources to produce eco-friendly alternatives. Challenges and opportunities in this emerging field has also been covered.

Cosmetics have long relied on oils and fats for their moisturizing, emollient, and functional properties. Chapter 6 examines the use of oils and fats in the cosmetic industry, ranging from skincare to haircare products and delve into the formulation aspects and discuss the growing demand for natural and sustainable ingredients.

Coatings are essential for protection and enhancement in numerous industries. In seventh chapter, applications of oils and fats as raw materials for coatings has been explored. In addition, their role in providing durability, adhesion, and corrosion resistance, while also considering the sustainability aspects of such coatings have also been discussed.

The eighth chapter focuses on the utilization of oils and fats as raw materials for corrosion inhibitors and biolubricants. We delve into their effectiveness in protecting metal surfaces from degradation and their potential as environmentally friendly lubricants. The chapter discusses the challenges in implementing these alternatives and their benefits for various industries.

The pharmaceutical industry constantly seeks new and innovative solutions, and vegetable oils have emerged as promising candidates. This chapter delves into the unique properties of vegetable oils and their applications in pharmaceutical formulations. From drug delivery systems to excipients, vegetable oils offer numerous advantages, such as improved bioavailability and enhanced stability. We explore the latest research and developments in this exciting field.

As the world strives towards a greener future, the search for sustainable energy sources becomes increasingly crucial. In this chapter, we explore the utilization of non-edible oils as biodiesel. These oils, derived from plants that are not traditionally used for food, offer a renewable and environmentally friendly alternative to conventional fossil fuels. Chapter 10 delves into the production methods, properties, and challenges associated with non-edible oils as biodiesel, shedding light on their potential impact on energy sustainability.

Oils and fats play a significant role in both ecological and economic realms. Chapter 11 examines the intricate relationship between oil and fat

production, consumption, and their environmental impact and explores the topics such as deforestation, land use, and the carbon footprint associated with oil production, as well as the economic implications of oil markets and trade. By understanding the ecological and economic aspects of oils and fats, decisions to foster a sustainable and balanced future can be made.

Corrosion poses a significant challenge across various industries, leading to economic losses and safety concerns. In chapter 12, potential of oils and fats as raw materials for corrosion inhibitors has been explored. This last chapter of the book delve into the unique properties of these substances that make them effective in preventing or reducing corrosion. By examining their mechanisms of action and applications, the possibilities of harnessing oils and fats to mitigate the damaging effects of corrosion have been uncovered.

Throughout this book, editors and authors aim to provide a comprehensive understanding of oils and fats, showcasing their versatility and potential in different fields. From pharmaceutical applications to energy sustainability and environmental considerations, the chapters ahead will shed light on the multifaceted nature of oils and fats. This exploration will inspire further research and innovation, pushing the boundaries of what oils and fats can achieve.

Abstract

Worldwide, fats and oils occupy major roles in nearly all industries like food, pharmaceutical, surfactants, biodiesel, agriculture, etc. The major renewable raw materials for the chemical industry are oils and fats, which are lipids. When ingested in sufficient quantities, they serve as a vital component of a healthy diet. Triacylglycerols (TAGs), also referred to as triglycerides, are essentially ester-linked glycerol moieties connected with three fatty acids that make up oils and fats. These fatty acids provide fats with useful properties. Because of the modification in lipids with improved nutritional and functional qualities, scientists and researchers have recently developed a growing interest in fats and oils. Triacylglycerols have a variety of properties and use depending on their structure and lipid composition. Therefore, altering the TAGs of lipids is a method for producing personalized lipids and expanding the range of their applications. Due to the detrimental health effects of trans fats, which are mostly brought on through partial hydrogenation, interesterification has become the dominant alternative strategy. This chapter provides a wide range of unprocessed fats and oils, along with information on their characteristics, classification, and historical evolution. In addition, the chapter emphasises the applications and difficulties in this field.

Keywords: Fats, oils, raw materials, saturated, unsaturated, applications, triglycerides

1.1 Introduction

“Fatty acids” (FAs) are molecules with long carbon chains in which the hydrogen atoms are connected to carbon atom bonds along with chains bearing carboxyl ($-\text{CO}$) as a functional group. Fatty acids are the building blocks of “fats” and “oils. “Saturated” fats are simple straight chains of carbon (C) atoms having alkanes, i.e., only single bonds between C-atoms, whereas unsaturated fats have alkenes or alkynes, i.e., double or more bonds. As a result, polyunsaturated fatty acids have more than two double bonds between C-atoms while monounsaturated fatty acids only have one double bond [1].

Natural fats and oils are mainly composed of triacylglycerols (TAGs), and the composition and molecular structure of TAGs differ from the physico-chemical and determines functional and nutritional properties of fatty acids, i.e., saturated, mono or polyunsaturated [2]. The suitability of fats and oils are usually determined by their physico-chemical properties. The use of the words “oil and fat” in most languages recognizes the property of being liquid or solid at ambient temperature as the basis for distinguishing between these two classes of products [3]. The molecular structure, melting and crystallization behaviour, and rheological properties of fats and oils are important for the rational design of lipid materials [4]. It is well known that the properties of fats and oils mainly depend on their triacylglycerol composition, i.e., the unsaturation degree and carbon chain length of the TAGs component fatty acid (FA) molecules [5].

Oils and fats are organic compounds with carboxylic acids as active elements. As a renewable source, oils and fats from plant seeds and animal tissues are used to manufacture petroleum products in industries [6]. Fats and oils are a “great source of energy (9 kcal/g) and essential fatty acids such as linoleic acid (18:2), linolenic acid (18:3), EPA (20:5) and DHA (22:6) to humans” [7]. Fats have a vital role in meat products, influencing organoleptic like palatability, texture and flavour, and technological aspects like cooking loss, emulsion stability, water holding capacity and rheological properties. In comparison to animal fats, vegetable oils have a higher ratio of unsaturated to saturated fatty acids and do not include cholesterol [8]. Being a source of important fatty acids and fat-soluble bioactive substances, vegetable oils and fats are a crucial part of the human diet.

Palm oil, sunflower oil, rapeseed oil and soybean oil are the four edible vegetable oils that are traded the most on a global scale. Interest in alternate sources of vegetable oils has developed due to the current demand for oils and fats for human consumption, with an emphasis on nutritious eating and new industrial uses [9]. Studies on the chemical and physical

characteristics of oils and fats produced from distinctive oil plants have been done in order to identify substitute lipid sources with high nutritional value as well as to enhance commercial applications [10]. Due to the presence of carotenoids and chlorophyll pigments, vegetable oils are often clear and have a yellow or green colour [7]. Dietary sources of fats that play significant and varied roles in biological processes include vegetable oils and animal fats. Triacylglycerols are important components of oils and fats, and the profiles of various oils and fats varies significantly. For nutritional evaluation, quality assurance, and ensuring the safety of oils and fats, TAG profiles are required [11].

According to O'Brien (2009), "edible oils and fats consisting of esters of glycerine and fatty acids (>90%) are structurally distinguished from triglycerol based on their chain length, the position of the double and cis/trans bonds as well as the relative ratios of saturated and unsaturated fatty acids, i.e., number and position of double bonds" [9]. In human nutrition, meats, fats, edible oils, fish, dairy products and nuts are the main sources of lipids in the human diet. Researchers have found that "dietary fatty acids play an important role in cholesterol metabolism and thus may be associated with cardio-vascular disease (CVD)" [12]. As we gain more knowledge about the relation between dietary fats and fatty acids and chronic diseases, particularly coronary artery disease (CAD), the significance of edible fats and oils in health and illness continues to develop [13].

In total, India grows nine different oil seed crops, seven of which are used to make edible oils, including sunflower, safflower, oilseed rape (mustard), niger, sesame, soybean, and peanut. Linseed and Castor, on the other hand, are non-edible oil seeds. Significant amounts of edible oil are also produced by maize germ, cotton seed, and rice bran [13]. Fats and oils are widely used in domestic and industrial settings, as well as being the most frequent contaminants in wastewater. Because they are typically removed by physical processes in sewage treatment plants, these substances are left behind in large quantities that are challenging to discard and process [13]. Fats and oils are significant organic components of municipal and industrial wastewaters, although it is unclear how they behave exactly during the treatment process [14]. Although recent advances in this sector have made it possible to remove a sizable part of oil from wastewater, biological treatment of oily wastewater is not well developed [15]. Anaerobic digesters of various designs have been researched for the treatment of sludge and oil simultaneously. For instance, anaerobic co-digestion of food waste, oils and fats with sewage sludge [16], long-chain fatty acids of oils and fats with municipal sludge [17], and aerobic co-digestion of sludge with oils and fats were also examined [18, 19].

1.2 Classification of Oils and Fats

Essential nutrients in a good diet include oils and fats. The terms oil and fat differ by the states of triglycerides, i.e., at room temperature, liquid triglyceride is termed as oils whereas at solid state it is fat [20]. Most commonly used oils and fats have long chain fatty acids, i.e., typically 8 to 20 carbon atoms, mostly having an even number of carbons; however, an odd number of carbon long chains is found mostly in animal fats. Such fatty acids contain $-\text{CH}_3$ (methyl) group at one end and $-\text{COOH}$ (carboxylic acid) group at other end. An ester bond of triacylglycerol is formed by the reaction of this carboxylic group with the hydroxyl ($-\text{OH}$) group present on the glycerol molecule [20].

Books in the series, “Bioprocessing in Food Science”

NUTRITIONAL SCIENCE AND TECHNOLOGY: Concept to Application, Edited by Tejpal Dhewa, Anil Kumar Puniya, and Anil Panghal, ISBN: 97811198089. This new volume in the groundbreaking series, “Bioprocessing in Food Science,” Nutritional Science and Technology, is a comprehensive resource covering topics such as human nutrition, food safety concerns, and emerging technologies like nanotechnology, and it also addresses the need for innovative food products, contamination, and regulatory challenges in the global food market.

HARVESTING FOOD FROM WEEDS, Edited by Prerna Gupta, Navnidhi Chhikara, and Anil Panghal, ISBN: 9781119791973. An exciting new volume in the groundbreaking new series, “Bioprocessing in Food Science,” *Harvesting Food from Weeds* focuses on the latest processes, industrial applications, and leading research on this important, evolving new area, for engineers, scientists, students, and other industry professionals.

MICROBES IN THE FOOD INDUSTRY, Edited by Navnidhi Chhikara, Anil Panghal, and Gaurav Chaudhary, ISBN: 9781119775584. This newest volume in the groundbreaking new series, “Bioprocessing in Food Science,” focuses on the latest processes, industrial applications, and leading research on microbes in the food industry, for engineers, scientists, students, and other industry professionals.

NOVEL TECHNOLOGIES IN FOOD SCIENCE, Edited by Navnidhi Chhikara, Anil Panghal, and Gaurav Chaudhary, ISBN: 9781119775584. The third book in the series, “Bioprocessing in Food Science,” covers the latest and greatest new technologies in food science.

FUNCTIONAL FOODS, Edited by Navnidhi Chhikara, Anil Panghal, and Gaurav Chaudhary, ISBN: 9781119775560. Presenting cutting-edge information on new and emerging food engineering processes, *Functional Foods*, the second volume in the groundbreaking new series, “Bioprocessing in Food Science,” is an essential reference on the modeling, quality, safety, and technologies associated with food processing operations today.

THERMAL FOOD ENGINEERING OPERATIONS, Edited by Nitin Kumar, Anil Panghal, and M. K. Garg, ISBN: 9781119775591. Presenting cutting-edge information on new and emerging food engineering processes, *Thermal Food Engineering Operations*, the first volume in the new series, “Bioprocessing in Food Science,” is an essential reference on the modeling, quality, safety, and technologies associated with food processing operations today.

Other related titles from Scrivener Publishing

ESSENTIAL OILS: Extraction Methods and Applications, Edited by Inamuddin, Tariq Altalhi, and Jorddy Neves Cruz, ISBN: 9781119829355. Written and edited by some of the world’s top experts in the field, this exciting new volume provides up-to-date information on essential oils’ chemical structure, therapeutic, and biological actions, and defines their functional uses and evaluates the advantages and disadvantages of their use in a variety of sectors.

FUNCTIONAL POLYMERS IN FOOD SCIENCE, Part 1: Food Packaging, Edited by Giuseppe Cirillo, Umile Gianfranco Spizzirri, and Francesca Iemma, ISBN: 9781118594896. Provides an extensive overview of the link between polymer properties and food quality. **NOW AVAILABLE!**

FUNCTIONAL POLYMERS IN FOOD SCIENCE, Part 2: Food Processing, Edited by Giuseppe Cirillo, Umile Gianfranco Spizzirri, and Francesca Iemma, ISBN: 9781118595183. Provides an extensive overview of the link between polymer properties and food quality. **NOW AVAILABLE!**

ADVANCES IN FOOD SCIENCE AND TECHNOLOGY Volume 1, Edited by Visakh, P.M., Sabu Thomas, Laura B. Iturriaga, and Pablo Daniel Ribotta, ISBN: 9781118121023. Written in a systematic and comprehensive manner the book reports recent advances in the development of food science and food technology areas. **NOW AVAILABLE!**

ADVANCES IN FOOD SCIENCE AND NUTRITION Volume 2, Edited by Visakh P.M., Laura B. Iturriaga, and Pablo Daniel Ribotta, ISBN: 9781118137093. This important book comprehensively reviews research on new developments in all areas of food chemistry/science and nutrition. **NOW AVAILABLE!**

Applied Water Science Volume 1: Fundamentals and Applications, Edited by Inamuddin, Mohd Imran Ahamed, Rajender Boddula and Tauseef Ahmad Rangreez, ISBN 9781119724766. Edited by one of the most well-respected and prolific engineers in the world and his team, this is the first volume in a two-volume set that is the most thorough, up-to-date, and comprehensive volume on applied water science available today. **COMING IN SUMMER 2021**

Sustainable Water Purification, by Safiur Rahman and M. R. Islam, ISBN 9781119650997. This is the only book that takes a zero-waste approach to propose 100% sustainable water purification techniques. **NOW AVAILABLE!**
