Masood Zangeneh, Richmond Hill, ON, Canada

Over the past several decades we have witnessed dramatic shifts in prevailing approaches to mental health and addiction. Significant scientific achievements have led to novel treatment options that impacted the experiences of individuals with mental disorders. In recent years, new perspectives have begun to influence the way we address mental health and substance dependencies, resulting in a greater emphasis on mental health promotion and prevention strategies. Despite these progressions, mental health care systems too often remain stagnant, fragmented, and peripheral.

Masood Zangeneh

This sub-series provides an opportunity to expand upon cutting-edge research being presented at mental health or addiction related conferences or colloquia around the world. Each 50-125 page volume would be dedicated to a singular event and would provide an opportunity for scholars to present their research and get feedback from other scholars in their field.
