SpringerBriefs in Sociology

SpringerBriefs in Sociology are concise summaries of cutting-edge research and practical applications across the field of sociology. These compact monographs are refereed by and under the editorial supervision of scholars in Sociology or cognate fields. Volumes are 50 to 125 pages (approximately 20,000–70,000 words), with a clear focus. The series covers a range of content from professional to academic such as snapshots of hot and/or emerging topics, in-depth case studies, and timely reports of state-of-the art analytical techniques. The scope of the series spans the entire field of Sociology, with a view to significantly advance research. The character of the series is international and multi-disciplinary and will include research areas such as: health, medical, intervention studies, cross-cultural studies, race/class/gender, children, youth, education, work and organizational issues, relationships, religion, ageing, violence, inequality, critical theory, culture, political sociology, social psychology, and so on. Volumes in the series may analyze past, present and/or future trends, as well as their determinants and consequences. Both solicited and unsolicited manuscripts are considered for publication in this series. SpringerBriefs in Sociology will be of interest to a wide range of individuals, including sociologists, psychologists, economists, philosophers, health researchers, as well as practitioners across the social sciences. Briefs will be published as part of Springer's eBook collection, with millions of users worldwide. In addition, Briefs will be available for individual print and electronic purchase. Briefs are characterized by fast, global electronic dissemination, standard publishing contracts, easy-to-use manuscript preparation and formatting guidelines, and expedited production schedules. We aim for publication 8-12 weeks after acceptance.

Preface

After experiencing the period of so-called “Three Lost Decades,” Japan is facing a critical juncture in its society. Since the early 1990s, Japan has suffered from severe sluggishness in various aspects of its society. Both the 1986–1991 bubble economy and its subsequent burst were caused by government policy failures. Specifically, Japanese government officials and policymakers are blamed for their irresponsible no-policy in generating the bubble and their misguided intervention in treating the aftermath.

Faced with a shrinking population and the sense of being trapped in a blind alley, Japan needs an appropriate guiding light for structural reform of its society. Makeshift measures such as one-time cash handouts to households in the name of child subsidies or to small businesses in the form of hardship assistance will not be effective in bringing about structural change.

It is important for anyone who interacts with Japanese people to have a good understanding of the underlying psychological and social foundations of the rigid inflexibility observed in Japan’s political and socio-economic systems.

The purpose of this book is to examine conformity in Japan. Conformity to stereotypes is a major psychological cause of conflict in the political world. While conformity pressures give social groups and institutions coherence, positive in-group feelings can counteract out-group hostility or negligence.

Although the contemporary Japanese word for “society”, *shakai* has a history of 140 years, it does not include the concept of respecting the individual. Instead, it refers mainly to social frameworks and institutional aspects. In contrast, the traditional Japanese term for “society”, primarily *seken* (the world) which has been in use for 1,400 years, encompasses the human relationships of the group members.

This book argues that there is no concept of an independent and self-reliant individual in Japan, because neither traditional nor contemporary Japanese vocabularies for society embrace the responsible autonomous individual.

This book hypothesizes that Japanese people do not conceive of a “society” as such, but only a *seken*. Society is an assembly composed of independent and self-reliant individuals working together, while *seken* is a world of human relations governed by the unwritten rules and regulations.

Society is a group of disciplined individuals who can make decisions for themselves based on humanity, morality and rigorous calculation of costs and benefits for the good of the whole as well as individual. In contrast, Japan's *seken* is a world in which people are bound by various relationships and shackles, such as blood kinship, marital kinship, village, town, city, or prefecture of origin, school, university, work place, hobby, or residential management. A sense of belonging is the key factor that binds people in *seken*.

Examining phenomena such as low worker engagement, *karoshi* (death by over-work), high middle-age male suicide rates, bullying in school and at workplace, sex discrimination, hereditary members in the Diet, and failure to provide adequate protection for whistleblowers, this book reveals a common structure in Japanese minds: lack of respect for individuality, and the traditional and narrow sense of the world, *seken*.

Chapter 1 discusses recent phenomena caused by *seken* in Japan. Comparisons of the Japanese concepts between society and *seken* are made for clarification.

Chapter 2 investigates where and when the concept of *seken* originated. Referring to some literary works since 6th century, AD, this book investigates the origin of the idea of the world, *seken* in Japan.

In Chap. 3, we will explore the three pillars of *seken*: ambiguous words in Japanese, sense of belonging, and the "air", representing the unwritten rules and order, which together support *seken*, the platform. The platform generates conformity. This book presents a new model, Hand-Carved Tripod (HCT) Model of conformity, that shows the mechanism in which conformity pressures are generated and exercised over the people's mind.

Chapter 4 through 6 illustrates how conformity works in the areas of politics and public administration, business and labor, and education. By shedding light on conformity pressure felt by people from *seken* in its basic structure (Chap. 3) and in various areas (Chaps. 4 to 6), we will support the hypothesis that there is no society but *seken* in Japan. If this hypothesis is proven, it implies that the modern democratic system in Japan is shallow in its social institution.

The last two chapters discuss the factors needed to strengthen the respectability of individuals and to enhance Japanese social systems that are facing an incredible shrinking future.

Chapter 7 discusses the Capability Approach to establishing a new social institution in Japan that respects autonomous individuals. Capability concept that Harvard economist and philosopher Amartya Sen proposed would be appropriate for Japan to redirect its society toward respecting individuals for a better future. A leadership model, Zenger & Folkman's Tent Floor model, is introduced here.

Chapter 8 discusses a new structure for rebuilding society, the Spiral Staircase Structure for Japan, along with qualities of social institutions that are important in a new age: mobility, diversity, and competition with cooperation.

This volume examines the minds and behavior of the Japanese people. It will be beneficial to scholars and graduate students as well as business people who want to understand the workings of conformity in Japan, as viewed through social psychology, Japanese culture, and especially social influence and group dynamics

related to Japanese social institutions. The book analyzes the structure and characteristics of conformity in Japan, providing many cases of contemporary social events and happenings.
