# **Intelligent Systems Reference Library**

Volume 255

## **Series Editors**

Janusz Kacprzyk, Polish Academy of Sciences, Warsaw, Poland

Lakhmi C. Jain, KES International, Shoreham-by-Sea, UK

The aim of this series is to publish a Reference Library, including novel advances and developments in all aspects of Intelligent Systems in an easily accessible and well structured form. The series includes reference works, handbooks, compendia, textbooks, well-structured monographs, dictionaries, and encyclopedias. It contains well integrated knowledge and current information in the field of Intelligent Systems. The series covers the theory, applications, and design methods of Intelligent Systems. Virtually all disciplines such as engineering, computer science, avionics, business, e-commerce, environment, healthcare, physics and life science are included. The list of topics spans all the areas of modern intelligent systems such as: Ambient intelligence, Computational intelligence, Social intelligence, Computational neuroscience, Artificial life, Virtual society, Cognitive systems, DNA and immunity-based systems, e-Learning and teaching, Human-centred computing and Machine ethics, Intelligent control, Intelligent data analysis, Knowledge-based paradigms, Knowledge management, Intelligent agents, Intelligent decision making, Intelligent network security, Interactive entertainment, Learning paradigms, Recommender systems, Robotics and Mechatronics including human-machine teaming, Self-organizing and adaptive systems, Soft computing including Neural systems, Fuzzy systems, Evolutionary computing and the Fusion of these paradigms, Perception and Vision, Web intelligence and Multimedia.

Indexed by SCOPUS, DBLP, zbMATH, SCImago.

All books published in the series are submitted for consideration in Web of Science.

# Preface

In recent years, there has been a notable transition from rule-based Artificial Intelligence (AI) to Machine-Learning-based AI, with an increasing focus on Deep Learning. Currently, deep learning frameworks are at the forefront of AI technology, marking significant advancements in academic and industrial fields. The evolution of deep convolutional neural networks (CNNs) has positioned deep learning as the method of choice for computer vision tasks, including image classification, segmentation, object detection, and human keypoint detection. This surge in deep learning has sparked interest in applying Convolutional Neural Networks (CNNs) across various domains, including the task of logo detection.

A logo is a unique symbol which identifies the product and services of any company. Logos serve as the quintessential elements for brand identity in today's market, symbolizing a company's products and services while setting them apart from competitors. Consequently, automatic logo detection in real-world images has emerged as a critical challenge with substantial implications across numerous applications, such as brand management, copyright protection, advertisement, and market analysis. To date, various logo recognition methods have been proposed, but most of them require huge annotated datasets for training, posing significant challenges due to domain discrepancies between training (source domain) and testing (target domain) datasets. These discrepancies often result in suboptimum detection accuracy. In this book, we aim to document recent advancements and explore future directions for deep learning in logo recognition. This book introduces:

- (1) A weakly supervised logo detection approach leveraging attention mechanisms, which emphasizes key features and identifies logo positions without need of detailed object-level annotations.
- (2) A robust logo detection framework, incorporating a feature extraction network enhanced with spatial and channel attention modules, coupled with an anchor-free detection head for precise and efficient logo identification.
- (3) Strategies to address the domain shift problem between training and testing data by integrating domain adaptation methods into detection frameworks, improving accuracy across different logo datasets.

- (4) An innovative domain adaptation technique based on entropy minimization to bridge the domain gap between synthetic (simulated) and real logo images, facilitating unsupervised logo detection suitable for practical application.

This book also provides valuable insights into feature learning and the application of various deep learning frameworks in logo recognition through detailed experiments and analyses, offering readers a comprehensive understanding of deep learning and logo detection.

# Contents

<b>1</b>	<b>Deep Convolutional Neural Networks</b>	1
1.1	Deep Learning Frameworks	1
1.1.1	Core Component and Key Elements of Deep Learning	3
1.2	Feature Extraction Networks	9
1.2.1	VGG: Very Deep Convolutional Networks for Large-Scale Image Recognition	10
1.2.2	Residual Networks	10
1.2.3	Deep Layer Aggregation Networks	13
1.2.4	Hourglass Framework	13
1.3	Object Detection Frameworks: Detection Head	15
1.3.1	Detection Head Functionality in Object Detection Frameworks	16
1.3.2	Anchor Box-Based Detection Frameworks	17
1.3.3	Anchorfree Detection Frameworks	23
1.4	Summary	30
	References	30
<b>2</b>	<b>Introduction to Logo Detection</b>	33
2.1	Logo Detection and Its Applications	33
2.2	Logo Detection Challenges	34
2.3	Related Work in Logo Detection	36
2.3.1	Deep Learning for Logo Detection	36
2.4	Proposed Approaches for Logo Detection	37
2.5	Summary	39
	References	39
<b>3</b>	<b>Weakly Supervised Logo Detection Approach</b>	43
3.1	Weakly-Supervised Logo Detection Using Image-Level Annotation	43
3.2	Attention Mechanisms	46

3.3	Weakly Supervised Logo Detection with Dual-Attention	
	Dilated Residual Network	48
3.3.1	Feature Extraction Backbone Network	49
3.3.2	Spatial Attention Mechanism	51
3.3.3	Channel Attention Mechanism	53
3.3.4	Gradient-Based Grad-CAM for Localization of Logos	54
3.3.5	Implementation of Channel and Spatial Attention	55
3.4	Experiments and Results	56
3.4.1	Implementation	56
3.4.2	Dataset	56
3.4.3	Evolution Measures	58
3.4.4	Comparison with Different Attention Modules	58
3.5	Summary	63
	References	63
<b>4</b>	<b>Anchorfree Logo Detection Framework</b>	<b>65</b>
4.1	Dual-Attention LogoNet for Logo Detection	65
4.1.1	Overview of the Logo Detection Framework	65
4.1.2	Layer-Aggregated Hourglass Style Feature Extraction Network	66
4.1.3	Attention Modules	69
4.1.4	Detection Head	71
4.1.5	Overall Framework of Dual-Attention LogoNet	73
4.1.6	Lightweight CNNs Network Architecture for Practical Applications	74
4.1.7	Experiments and Results	76
4.1.8	Implementation	77
4.1.9	Evaluation on FlickrLogos-32 Dataset	77

## About the Authors

**Prof. Yen-Wei Chen** received his B.E. degree in 1985 from Kobe University, Kobe, Japan. He received his M.E. degree in 1987 and his D.E. degree in 1990, both from Osaka University, Osaka, Japan. From 1991 to 1994, he was a research fellow at the Institute of Laser Technology, Osaka. From October 1994 to March 2004, he was an associate Professor and a professor in the Department of Electrical and Electronic Engineering, University of the Ryukyus, Okinawa, Japan. He is currently a professor at the college of Information Science and Engineering, Ritsumeikan University, Japan. He is associate Editors for the International Journal of Image and Graphics (IJIG), and the International Journal of Knowledge-based and Intelligent Engineering Systems. His research focuses on computer vision, deep learning and medical image analysis. He has published more than 300 research papers in these fields.

**Dr. Xiang Ruan** received the B.E. degree from Shanghai Jiao Tong University, Shanghai, China, in 1997, and the M.E. and Ph.D degrees from Osaka City University, Osaka, Japan, in 2001 and 2004, respectively. He was with OMRON corporation, Kyoto Japan from 2007 to 2016 as an expert engineer. He is currently the founder and CEO of Tiwaki Co., Ltd., Japan. He is also guest professor of Ritsumeikan University, Japan. His research interests include computer vision, machine learning, and image processing.

**Dr. Rahul Kumar Jain** received his Ph.D degree from Ritsumeikan University, Shiga, Japan, in 2022. He has been an intern trainee at Tiwaki Co., Ltd., Japan since 2019. He is now working as Assistant Professor at the College of Information Science and Engineering, Ritsumeikan University. His research interests include computer vision, deep learning, and image processing as well as the applications of Artificial Intelligence in areas including engineering, science, computer science, healthcare and so on.
