Contents

List of Contributors	xxiii
Foreword	xxix
Preface	xxxii
1 ALUMINIUM ELECTROLYSIS	1
1.1 Formation of CO₂ and CO on Carbon Anodes in Molten Salts	3
<i>J. Thonstad and E. Sandnes</i>	
1.1.1 Introduction	3
1.1.2 Results	3
1.1.2.1 Fluoride melts	3
1.1.2.2 Chloride melts	5
1.1.3 Discussion	7
1.1.4 Conclusion	8
References	8
1.2 Interaction of Carbon with Molten Salts-Chloride-Carbonate Melts	9
<i>D. Fray</i>	
1.2.1 Introduction	9
1.2.2 Carbon as an anode in molten salt cells	9
1.2.2.1 Inert anodes	9
1.2.2.2 Reactive anodes	10
1.2.3 Carbon in the form of carbonate ions	10
1.2.4 Carbon in the form of carbide ions	13
1.2.5 Carbon as a cathode	13
1.2.6 Conclusions	14
References	15
1.3 Anode Processes on Carbon in Chloride Melts with Dissolved Oxides	17
<i>E. Sandnes, G. M. Haarberg, A. M. Martinez, K. S. Osen and R. Tunold</i>	
1.3.1 Introduction	17
1.3.2 Electrochemical processes in chloride-oxide melts	18
1.3.2.1 Cl ₂ , CO and CO ₂ formation	18
1.3.2.2 Melt systems	18
1.3.3 Experimental	19
1.3.4 Results	19

1.3.4.1	Cyclic voltammograms in the NaCl-Na ₂ O and NaCl-Na ₂ O + CaCl ₂ -CaO systems	19
1.3.4.2	Stationary polarisation curves and gaseous products	21
1.3.4.3	Gas composition	22
1.3.4.4	Previous investigations	24
1.3.4.5	Adsorption capacitance and diffusion impedance from electrochemical impedance spectroscopy	24
1.3.5	Discussion and conclusions	24
	References	25
1.4	Aluminium Electrolysis with Inert Anodes and Wettable Cathodes and with Low Energy Consumption	27
	<i>I. Galasiu and R. Galasiu</i>	
1.4.1	Introduction	27
1.4.2	Cell designs with inert anodes and wettable cathodes	28
1.4.3	Electrolytes with low melting temperature	32
1.4.4	Energetic aspects	33
1.4.5	Material problems	34
1.4.6	Conclusion	35
	Acknowledgments	36
	References	36
1.5	Influence of the Sulfur Content in the Carbon Anodes in Aluminum Electrolysis – a Laboratory Study	39
	<i>S. Pietrzyk and J. Thonstad</i>	
1.5.1	Introduction	39
1.5.2	Experimental	41
	1.5.2.1 Experimental conditions	44
1.5.3	Results	44
1.5.4	Discussion	50
1.5.5	Conclusions	50
	Acknowledgments	51
	References	51
1.6	Aluminum Electrolysis in an Inert Anode Cell	53
	<i>O. Tkacheva, J. Spangenberg, B. Davis, and J. Hryn</i>	
1.6.1	Introduction	53
1.6.2	Experimental	54
	1.6.2.1 Set up	54
	1.6.2.2 Electrolyte	55
1.6.3	Current efficiency	59
1.6.4	Liquidus temperature	61
1.6.5	Electrolysis	61
	1.6.5.1 Electrolyte KF-AlF ₃	61
	1.6.5.2 Sodium fluoride impact	62

1.6.5.3	Voltage anomalies	64
1.6.5.4	Anode	67
1.6.6	Conclusions	67
	Acknowledgments	68
	References	68
1.7	Effect of Phosphorus Impurities on the Current Efficiency for Aluminium Deposition from Cryolite-Alumina Melts in a Laboratory Cell	71
	<i>R. Meirbekova, G. M. Haarberg and G. Sævarsdottir</i>	
1.7.1	Introduction	71
1.7.2	Experimental method	72
1.7.3	Results and discussion	73
1.7.3.1	Effect of current density	73
1.7.3.2	Effect of phosphorus	74
1.7.4	Conclusions	74
	Acknowledgments	75
	References	75
1.8	Influence of LOI on Alumina Dissolution in Molten Aluminum Electrolyte	77
	<i>Y. Yang, B. Gao, X. Hu, Z. Wang, and Z. Shi</i>	
1.8.1	Introduction	77
1.8.2	Experimental	77
1.8.2.1	Chemicals	77
1.8.2.2	Experimental method and apparatus for alumina dissolution rate measurement	78
1.8.3	Results and discussion	79
1.8.3.1	LOI of aluminas prepared at different temperatures	79
1.8.3.2	Dissolution performance of γ -Al ₂ O ₃ (calcined at 800°C for 1 h)	79
1.8.3.3	Dissolution rate of aluminas with different LOI	80
1.8.3.4	Influence of specific surface area on dissolution rate of alumina	80
1.8.3.5	LOI on average dissolution rate	80
1.8.4	Conclusions	83
	Acknowledgments	83
	References	83
1.9	The Electrolytic Production of Al-Cu-Li Master Alloy by Molten Salts Electrolysis	85
	<i>B. Gao, S. Wang, J. Qu, Z. Shi, X. Hu, and Z. Wang</i>	
1.9.1	Introduction	85
1.9.2	Experimental	86
1.9.2.1	Chemicals	86
1.9.2.2	Electrochemical measurements	86
1.9.2.3	Reaction vessel and electrowinning cell	87
1.9.3	Results and discussion	87
1.9.3.1	Electrochemical studies of LiF-LiCl-Li ₂ O melt	87
1.9.3.2	Electrolysis	92

1.9.4	Conclusions	92
	Acknowledgments	93
	References	93
1.10	Transference Numbers in Na(K) Cryolite-Based Systems	95
	<i>J. Híveš, P. Fellner, and J. Thonstad</i>	
1.10.1	Introduction	95
1.10.2	Experimental	96
1.10.2.1	Chemicals	96
1.10.2.2	Apparatus and experimental procedure	96
1.10.2.3	Analysis	98
1.10.3	Results and discussion	98
1.10.4	Conclusions	99
	Acknowledgments	101
	References	101
1.11	125 years of the Hall-Héroult Process – What Made It a Success?	103
	<i>O.-A. Lorentsen</i>	
1.11.1	Introduction	103
1.11.2	Development of an industrial process for production of aluminum	104
1.11.2.1	The Hall–Héroult Process	104
1.11.2.2	The Bayer process	104
1.11.3	Some important process parameters	105
1.11.3.1	Electrolyte	105
1.11.3.2	Anode	105
1.11.3.3	Cell construction	106
1.11.3.4	Alumina feeding and control	106
1.11.3.5	Aluminum metal tapping	108
1.11.3.6	Environment	108
1.11.4	Technological macro trends	108
1.11.4.1	Anode	108
1.11.4.2	Cathode	109
1.11.4.3	Cell size	110
1.11.4.4	Process control	110
1.11.4.5	Energy consumption	110
1.11.5	Alternative processes	111
1.11.6	Conclusions	112
	References	112
2	NEW PROCESSES FOR ELECTROWINNING	113
2.1	Ionic Conduction of Oxygen and Calciothermic Reduction in Molten CaO-CaCl₂	115
	<i>R. O. Suzuki, D. Yamada, S. Osaki, R. F. Descallar-Arriescado, and T. Kikuchi</i>	
2.1.1	Introduction	115

2.1.2	EMF measurements	115
2.1.3	Oxygen-absorbing anode	117
2.1.4	Calciothermic reduction of electrically isolated oxide	119
2.1.5	CaO content in CaCl ₂ suitable for NiO reduction	119
	Acknowledgments	121
	References	121
2.2	Effects of Temperature and Boron Concentration of a Boron-Doped Diamond (BDD) Electrode on NF₃ Current Efficiency, and Stability of BDD Electrode in Molten NH₄F·2HF	123
	<i>A. Tasaka, Y. Iida, T. Shiono, M. Uno, Y. Nishiki, T. Furuta, M. Saito, and M. Inaba</i>	
2.2.1	Introduction	123
2.2.2	Experimental	124
	2.2.2.1 Electrolytic cell	124
	2.2.2.2 Electrolysis of NH ₄ F·2HF melt with saturated concentration of Ni ²⁺ ion	124
2.2.3	Results and Discussion	124
	2.2.3.1 Electrochemical measurement and surface analysis of BDD electrode	124
	2.2.3.2 Electrolysis of NH ₄ F·2HF melt under various conditions	128
	Acknowledgments	131
	References	131
2.3	Nanoparticle Size Control Using a Rotating Disk Anode for Plasma-Induced Cathodic Discharge Electrolysis	133
	<i>M. Tokushige, T. Nishikiori, and Y. Ito</i>	
2.3.1	Introduction	133
2.3.2	Experimental	135
2.3.3	Results and discussion	135
2.3.4	Conclusion	140
	Acknowledgments	140
	References	140
2.4	Cathodic Phenomena in Li Electrolysis in LiCl-KCl Melt	143
	<i>T. Takenaka, T. Morishige, and M. Umehara</i>	
2.4.1	Introduction	143
2.4.2	Experimental	144
2.4.3	Results and discussion	144
	2.4.3.1 Li deposition and metal fog formation	144
	2.4.3.2 Gas bubble generation	146
2.4.4	Conclusion	147
	Acknowledgments	147

T. Ohashi, Department of Chemical Science and Engineering, Kobe University, Japan
T. Ohkubo, Graduate School of Engineering, Chiba University, Japan
N. Ohtori, Graduate School of Science and Technology, Niigata University, Japan
E. Olsen, Norwegian University of Life Sciences, Norway
S. Osaki, Faculty of Engineering, Hokkaido University, Japan
N. Osawa, Department of Applied Chemistry, Graduate School of Engineering, Doshisha University, Japan
K. S. Osen, SINTEF Materials and Chemistry, Norway
L.-E. Owe, Department of Materials Science and Engineering, Norwegian University of Science and Technology, Norway
O. Pauvert, CNRS, CEMHTI UPR 3079, Univ. Orléans, F-45071 Orléans, France; and ITU, Germany
S. Pietrzyk, Faculty of Non-Ferrous Metals, AGH – University of Science and Technology, Poland
I. B. Polovov, Department of Rare Metals and Nanomaterials, Ural Federal University, Russia
J. Qu, School of Materials and Metallurgy, Northeastern University, China
B. Qin, Department of Materials Science and Engineering, Norwegian University of Science and Technology, Norway
A. Rakhmatullin, CNRS, CEMHTI UPR 3079, Univ. Orléans, F-45071 Orléans, France
O. I. Rebrin, Department of Rare Metals and Nanomaterials, Ural Federal University, Russia
E. V. Rebrov, Laboratory of Chemical Reactor Engineering, Eindhoven University of Technology, the Netherlands
O. Rohr, EADS, Germany
A. L. Rollet, CNRS, CEMHTI UPR 3079, Univ. Orléans, F-45071 Orléans, France and Sorbonne Universités, UPMC, Univ Paris 06, UMR 8234, PHENIX, F-75005 Paris, France
S. Rolseth, SINTEF Materials and Chemistry, Norway
L. Rycerz, Chemical Metallurgy Group, Faculty of Chemistry, Wroclaw University of Technology, Poland
G. Sævarsdóttir, School of Science and Engineering, Reykjavik University, Iceland
M. Saito, Department of Molecular Chemistry and Biochemistry, Faculty of Science and Engineering, Doshisha University, Japan
S. Sakai, Sumitomo Electric Industries, Ltd., Japan
Y. Sakamura, Central Research Institute of Electric Power Industry, Japan
M. Salanne, Sorbonne Universités, UPMC, Univ Paris 06, UMR 8234, PHENIX, F-75005 Paris, France
E. Sandnes, Primary Metal Technology, Hydro, Norway
V. Sarou-Kanian, CNRS, CEMHTI UPR 3079, Univ. Orléans, F-45071 Orléans, France
N. Sato, Institute of Multidisciplinary Research for Advanced Materials, Tohoku University, Japan

- Y. Sato**, Department of Metallurgy, Graduate School of Engineering, Tohoku University, Japan
- J.C. Schouten**, Laboratory of Chemical Reactor Engineering, Eindhoven University of Technology, the Netherlands
- C.A.C. Sequeira**, Materials Electrochemistry Group, ICEMS, Instituto Superior Técnico, Technical University of Lisbon, Portugal
- D. N. Sergeev**, Ivanovo State University of Chemistry and Technology, Russia
- D. Shakhnin**, V.I. Vernadsky Institute of General and Inorganic Chemistry, National Academy of Sciences of Ukraine, Ukraine
- Z. Shi**, School of Materials and Metallurgy, Northeastern University, China
- Y. Shimohara**, Research Laboratory for Nuclear Reactors, Tokyo Institute of Technology, Japan
- T. Shiono**, Department of Applied Chemistry, Doshisha University, Japan
- O. Shirai**, Graduate School of Agriculture, Kyoto University, Japan
- A. K. Shtolts**, Department of Theoretical Physics and Applied Mathematics, Ural Federal University, Russia
- F. Šimko**, Department of Molten Salts, Institute of Inorganic Chemistry, Slovak Academy of Sciences, Slovakia
- C. Simon**, Sorbonne Universités, UPMC, Univ Paris 06, UMR 8234, PHENIX, F-75005 Paris, France
- J. Spangenberg**, Argonne National Laboratory, USA
- M. Straka**, Department of Fluorine Chemistry, Nuclear Research Institute Řež, plc, Czech Republic
- R. O. Suzuki**, Faculty of Engineering, Hokkaido University, Japan
- L. Szatmáry**, Department of Fluorine Chemistry, Nuclear Research Institute Řež, plc, Czech Republic
- T. Tahara**, Graduate School of Engineering, Chiba University, Japan
- K. Takahashi**, Graduate School of Engineering, Chiba University, Japan
- K. Takase**, Graduate School of Science and Technology, Niigata University, Japan
- O. Takeda**, Department of Metallurgy, Graduate School of Engineering, Tohoku University, Japan
- T. Takenaka**, Faculty of Chemistry, Materials and Bioengineering, Kansai University, Japan
- R. Tammé**, Institute of Technical Thermodynamics, German Aerospace Center – DLR, Germany
- A. Tasaka**, Department of Applied Chemistry, Graduate School of Engineering, Doshisha University, Japan; and Department of Molecular Chemistry and Biochemistry, Faculty of Science and Engineering, Doshisha University, Japan
- P. Taxil**, Laboratoire de Génie Chimique, CNRS UMR 5503, Université de Toulouse, France
- D. Thiaudiere**, SOLEIL Synchrotron, France
- J. Thonstad**, Department of Materials Science and Engineering, Norwegian University of Science and Technology (NTNU), Norway
- O. Tkacheva**, Argonne National Laboratory, USA
- M. Tokushige**, Graduate School of Engineering, Doshisha University, Kyoto, Japan
- M. E. Tray**, Department of Rare Metals and Nanomaterials, Ural Federal University, Russia
- T. Tsuda**, Frontier Research Base for Global Young Researchers, Graduate School of Engineering, Osaka University, Japan; and Department of Applied Chemistry, Graduate School of Engineering, Osaka University, Japan
- R. Tunold**, Department of Materials Science and Engineering, Norwegian University of Science and Technology, Norway
- T. Uda**, Graduate School of Engineering, Kyoto University, Japan
- A. Uehara**, Research Reactor Institute, Kyoto University, Japan
- M. Umehara**, Faculty of Chemistry, Materials and Bioengineering, Kansai University, Japan
- N. Umesaki**, Japan Synchrotron Radiation Research Institute, Japan
- M. Uno**, Permereg Electrode Ltd., Japan
- A. van Sandwijk**, Zr-Hf-Ti Metallurgie B.V., Den Haag, The Netherlands

- B. D. Vasin**, Department of Rare Metals and Nanomaterials, Ural Federal University, Russia
V. A. Volkovich, Department of Rare Metals and Nanomaterials, Ural Federal University, Russia
J. Wang, Department of Materials Science and Engineering, Norwegian University of Science and Technology, Norway
S. Wang, School of Materials and Metallurgy, Northeastern University, China
Z. Wang, School of Materials and Metallurgy, Northeastern University, China
J. Wehr, EADS, Germany
Y. Xiao, Department of Metallurgical Engineering, Anhui University of Technology, China; and Zr-Hf-Ti Metallurgie B.V., Den Haag, The Netherlands
S. M. Yakimov, Department of Rare Metals and Nanomaterials, Ural Federal University, Russia
D. Yamada, Faculty of Engineering, Hokkaido University, Japan
T. Yamamoto, Graduate School of Energy Science, Kyoto University, Japan
H. Yamana, Research Reactor Institute, Kyoto University, Japan
Y. Yang, Department of Materials Science and Engineering, Delft University of Technology, Den Haag, The Netherlands
Y. Yang, School of Materials and Metallurgy, Northeastern University, China
D. Zanghi, CNRS, CEMHTI UPR 3079, Univ. Orléans, F-45071 Orléans, France
