Contents

	List of Contributors xix
	Preface xxvii
1	Mycobial Nanotechnology in Bioremediation of Wastewater 1
	Vikanksha Thakur, Arun Kumar, and Jatinder Singh
1.1	Fungi 1
1.2	Nanotechnology Aspects 2
1.3	The Production of Nanoparticles Using an Origin of Fungi 2
1.3.1	Silver Nanoparticles 2
1.3.2	Gold Nanoparticles 3
1.3.3	Additional Nanoparticles 4
1.4	Categories and Characteristics of Synthesized Nanoparticles 4
1.4.1	Characteristics on Nanoparticles 5
1.4.2	Physical Characteristics 5
1.4.3	Biological Characteristics 5
1.4.4	Medical Benefits 5
1.4.5	Mechanical Characteristics 6
1.4.6	Optical Characteristics 6
1.4.7	Electrical Characteristics 6
1.5	Various Usage of Nanomaterials 6
1.6	Mycobial Bioremediation of Heavy Metals from Wastewater 7
1.7	Benefits of Mycobial Bioremediation 8
1.8	Constraints of Mycobial Bioremediation 9
1.9	Conclusion and Future Prospects 9
	References 9
2	Microbial Enzymes in Biodegradation of Organic Pollutants: Mechanisms and Applications 12
	Bharati Lap, Ashim Debnath, Gourav Kumar Singh, Priyank Chaturvedi, Joy Kumar Dey, and Sajal Saho
2.1	Introduction 12
2.1.1	Mechanism of Microbial Enzymes in Bioremediation of Organic Pollutants 13
2.1.1.1	Fungi 13
2.1.1.2	Bacteria 14
2.1.1.3	Algae 15
2.1.1.4	Other Microbes 15
2.1.2	Applications of Microbial Enzymes Mediated Bioremediation 17
2.1.3	Factors Affecting Enzymatic Biodegradation 17
2.2	Conclusion 18
	References 18

3	Microbe Assisted Remediation of Xenobiotics: A Sustainable Solution 20
	Azha Ufaq Nabi, Faamiya Shajar, and Reiaz Ul Rehman
3.1	Introduction 20
3.1.1	Sources of Xenobiotics 20
3.1.2	The Effects of Xenobiotics on Environment 22
3.1.2.1	Effect of Xenobiotics on Soil 22
3.1.2.2	Effect of Xenobiotics on Water 22
3.1.2.3	Effect of Xenobiotics on Plants 22
3.1.2.4	Effect of Xenobiotics on Marine Life 23
3.1.2.5	Effect of Xenobiotics on Terrestrial Animals 23
3.1.2.6	Effect of Xenobiotics on Human Health 23
3.2	Bioremediation 24
3.2.1	Factors Affecting Bioremediation 24
3.3	Environmental Factors 25
3.3.1	Strategies for Bioremediation 25
3.3.1.1	_
3.3.2	Bioventing 26
3.3.3	Biosparging 26
3.3.4	Bioaugmentation 26
3.3.5	Biostimulation 27
3.4	Ex Situ Bioremediation Strategies 27
3.4.1	Landfarming 27
3.4.2	Composting 27
3.4.3	Biopiling 27
3.5	Genetic Engineering Approaches 28
3.6	The Beneficial Role of Microbes in Degradation of Different Pollutants 29
3.6.1	In Heavy Metal Bioremediation 29
3.7	Mechanism of Heavy Metal Detoxification by Microbes 30
3.7.1	Biosorption Mechanisms 30
3.8	Intracellular Sequestration 30
3.9	Extracellular Sequestration 30
3.9.1	Metal Methylation 31
3.10	Reduction of Heavy Metal Ions by Microbial Cell 31
3.10.1	In Dye Bioremediation 31
3.11	The Degradation Mechanism of the Complex Dye Structure by Microbes 31
3.11.1	In Pesticide Bioremediation 32
3.11.2	In Petroleum Hydrocarbons and Chlorinated Compound Bioremediation 32
3.12	In Domestic and Agricultural Lignocellulose Wastes Remediation 33
3.13	Conclusion 34
	References 34
4	Bioremediation Strategies as Sustainable Bio-Tools for Mitigation of Emerging Pollutants 42
	Hamza Rafeeq, Zainab Riaz, Anum Shahzadi, Shazaf Gul, Fatima Idress, Sidra Ashraf,
	and Asim Hussain
4.1	Introduction 42
4.2	Bioremediation by Microbial Strains 43
4.2.1	Aerobic 44
4.2.2	Anaerobic 44
4.3	Factors Affecting Microbial Bioremediation 44
4.3.1	Principle of Bioremediation 45
4.4	Classification of Bioremediations 46

4.4.1	Land Farming 46
4.4.2	Biopile 46
4.4.3	Bioreactor 46
4.4.3.1	<i>In Situ</i> Bioremediation Techniques 47
4.4.3.2	Intrinsic <i>In Situ</i> Bioremediation 47
4.4.3.3	Engineered <i>In Situ</i> Bioremediation 48
4.4.4	Windrows 48
4.4.5	Bioslurping 48
4.4.6	Bioventing 49
4.4.7	Phytoremediation 49
4.4.8	Biosparging 50
4.5	Bioremediation of Various Pollutants 50
4.5.1	Bioremediation for Inorganic Pollutants 50
4.5.2	Bioremediation for Organic Pollutants 52
4.6	Recent Advancement and Challenges in Bioremediation 53
4.6.1	Bioinformatics Approaches in Bioremediation 53
4.6.2	Bioremediation Tools Based on Omics 53
4.6.2.1	Transcriptomics and Metatranscriptomics 53
4.6.2.2	Genomics 54
4.6.2.3	Proteomics and Metabolomics 54
4.6.3	Bioremediation Using Nanotechnological Methods 54
4.6.3.1	Designing the Synthetic Microbial Communities 54
4.6.3.2	Engineered Polymeric Nanoparticles for Hydrophobic Contaminant Bioremediation 56
4.6.3.3	Nanotechnology and Microbes 56
4.6.3.4	Genetic and Metabolic Engineering 56
4.7	Advantages and Disadvantages 57
4.8	Conclusion 58
4.9	Future Perspective 58
	References 58
5	How Can Plant-microbe Interactions be used for the Bioremediation of Metals in Water Bodies? 65
,	Gabriela Petroceli-Mota, Emilane Pinheiro da Cruz Lima, Mariana Miranda de Abreu, Glacielen Ribeiro de Souza,

7	Bacterial/Fungal Inoculants: Application as Bio Stimulants 108
,	V. Mamtha, Swati, K. Sowmiya, and Haralakal Keerthi Kumari
7.1	•
7.1	Introduction 108 Pictorical Nitrogram Fination (PNF) 100
7.1.1	Biological Nitrogen Fixation (BNF) 109
7.1.2	Production of an Iron Chelating Compound 109
7.1.3	Phytohormone Production 110
7.1.4	Solubilization of Phosphate (P) 110
7.2	Arbuscular Mycorrhizal Fungi (AMF) 111
7.2.1	Microbial Inoculants as Pathogens or Parasites 112
7.2.2	Other than Bacterial/Fungal Inoculants Algal Extracts also Play Important Role 113
7.2.3	Disruption of Ecosystem Services 114
7.2.4	World Market for PGPR-Based Biostimulants 114
7.3	Conclusion 114
	References 114
8	Microbial Inoculants and Their Potential Application in Bioremediation: Emphasis on Agrochemicals 118 Shriniketan Puranik, Kallinkal Sobha Sruthy, Menpadi Manoj, Konaghatta Vijayakumar Vikram, Praveen Karijadar,
0.1	Sandeep Kumar Singh, and Livleen Shukla
8.1	Introduction 118 Pollution of Different Matrices by Asymptotic 110
8.2	Pollution of Different Matrices by Agrochemicals 119
8.2.1	Soil 119
8.2.2	Water 120
8.2.3	Air 121
8.3	Different Strategies Employed in Bioremediation 122
8.3.1	In Situ Biodegradation Strategies 122
8.3.2	Ex Situ Biodegradation Strategies 126
8.4	Microbe-Mediated Bioremediation and Recent Advances 127
8.4.1	Bacterial Bioremediation 127
8.4.2	Fungal Bioremediation 129
8.4.3	Microalgae and Diatom-Based Bioremediation 130
8.5	Novel Enzymes or Genes Involved in Bioremediation of Pollutants 131
8.6	Conclusion 135

Preface

Hazardous contaminants in waste from the industrial, home, and agricultural sectors inflict enormous harm to the ecosystem and the lives of those who live nearby. These hazardous contaminants can exist in a variety of forms that are inclined by climate features like the presence of various types of organic matter, pH, water system hardness, transformation, and bioavailability. Since majority of them are mobile and soluble, they have the potential to bioaccumulate in the food chain and cause serious harm above certain concentrations. Microbe-based approaches are an important tool for removing toxic contaminants from the ecosystem and have piqued the concern of investigators over the centuries. Hence, the use of appropriate microorganisms in the remediation of pollutants is critical to effectively reducing the negative effects of toxic pollutants. Several microorganisms were discovered as promising candidates for bioremediation of hazardous contaminants via biotransformation, bioremediation, bioaccumulation, or biosorption processes. Hazardous contaminants degradation mechanisms exhibited by microorganisms are primarily determined by their degradative plasmids and spores. The book entitled Microbes Based Approaches for the Management of Hazardous Contaminants is focused on the most insightful aspects of microbe-based approaches for addressing hazardous contaminants in our ecosystem. This book covers novel and indigenous microbes and microbial products. Biofilms, exopolysaccharides, bio-surfactants, enzymes, metabolites, microbially synthesized nanoparticles, and the latest genetic and other metabolic engineering approaches based on microbial technologies that are utilized in the remediation and management of hazardous contamination from the environment and surroundings are covered. The book details many methods used, including degradation and remediation of hazardous pollutants, genetically engineered microorganisms for the removal of toxic organic compounds, metabolic engineering as alternative strategies for microbial bioremediation, microbial immobilization and use of microbial surfactants, microorganisms as the indicator for pollutants, biochemical approaches in microbial biodegradation, to name a few. The chapters provide readers with rich sources of reference information on important topics in this field. There are several illustrations so that the scholars can grasp the flow of the content and the transition to the next topic.

Chapters are written by active researchers and presented in an accessible way to the public beyond those specialists in the topic dealt with. The content aims to bridge the gap between advanced research and general understanding, providing clear explanations and practical insights that can be appreciated by a broader audience. This book serves as a helpful tool for scientists, industrial professionals, and experts working in diverse aspects to understand the various microbial-based methodologies toward hazardous waste management with proper resource management and technological applications. We are honored that the leading experts with extensive, in-depth experience and expertise in diverse microbial technologies have taken the time and effort to develop outstanding chapters.

We thank team Wiley for their generous assistance, constant support, and patience in initializing the book. The authors are also grateful to our esteemed friends, well-wishers, and faculty colleagues.
