CONTENTS

INCOSE Notices	xv
Preface	xvi
Authors	xvii
Major Contributors	xviii
Reviewers	xix
Revision History	xx
List of Figures	xxi
List of Tables	xxiv
1 Introduction	1
1.1 Purpose	1
1.2 Scope	2
1.3 Audience	3
1.4 Approach	3
1.5 Mapping of NRVV Across Standards	5
1.6 The Five NRVV Activity Areas Discussed in this Manual	7
1.7 Needs and Requirements Manual Organization	8
2 Definitions and Concepts	11
2.1 Ontology used in this Manual	11
2.1.1 Stakeholder Expectations, Needs, and Requirements	12
2.1.2 Needs Versus Requirements	12
2.1.2.1 Integrated Set of Needs	12
2.1.2.2 Design Input Requirements	13
2.1.2.3 Different Perspectives Communicated by Needs and Requirements	14

2.1.3	Stakeholder Requirements Versus System Requirements in the Context of System Verification and System Validation	14
2.1.4	Requirements Versus Specifications and Documents Versus Specifications	15
2.1.4.1	Design Inputs Versus Outputs	15
2.1.4.2	Documents Versus Data-Centric Sets	16
2.2	Definitions	16
2.2.1	Entities	17
2.2.2	Lifecycle Concepts	18
2.2.3	Needs	18
2.2.4	Requirements	18
2.2.5	Attributes	19
2.2.6	Needs and Requirements Expressions	19
2.2.7	Sets of Needs and Sets of Requirements	20
2.3	Basic Concepts	20
2.3.1	Needs, Requirements, and the Entity to Which They Apply	20
2.3.2	Levels of Lifecycle Concepts, Needs, and Requirements	22
2.3.2.1	Levels in the Context of an Organization	22
2.3.2.2	Use of Systems Thinking—The SOI in Context of the Macrosystem	28
2.3.2.3	Portfolio Management Within the Operational Level	29
2.3.2.4	SOI Customer/Supplier Relationship Considerations	30
2.3.2.5	Levels of Architecture—a Hierarchical View	32
2.3.2.6	Levels of Architecture—a Holistic View	33
2.3.2.7	Using Both the Hierarchical and Holistic Architecture Views	36
2.3.3	Verification and Validation in Context	37
2.3.3.1	Distinctions Between the Concepts of Verification and Validation	39
2.3.3.2	System Verification and Validation After Product Release	44
2.3.4	Integration, Verification, and Validation and the SE Vee Model	45
2.3.4.1	Concurrent Integration, Verification, and Validation	46
2.3.4.2	System Verification Versus Requirement Verification	47
2.3.4.3	System Verification Based on Lower-Level Verifications	47
2.3.4.4	Verification and Validation in Context	48
2.3.4.5	The Intent of System Verification and System Validation	48
2.3.4.6	Reducing Risk by Addressing System Verification and Validation Early in the Lifecycle	50
2.3.5	Project and Systems Engineering Management Concepts	51
2.3.5.1	Importance of an Integrated, Multidiscipline, Collaborative Project Team	51
2.3.5.2	Importance of Effective Communications	53
2.3.5.3	Avoiding Technical Debt	55
2.3.5.4	Greenfield Versus Brownfield Systems	57
2.3.6	Overview of System Development Activities Covered in This Manual	58
3	Information-Based Needs and Requirement Development and Management	63
3.1	Information-Based Needs and Requirements Definition and Management	64
3.1.1	Key Characteristics of the I-NRDM Approach	66
3.1.1.1	Implementing Development Lifecycle Phase Activities Concurrently Rather Than Serially	66

3.1.1.2	Using a Holistic Versus A Silo-based Organization Structure	68
3.1.1.3	Focusing on the Integrated System Optimization Versus Subsystem Optimization	68
3.1.1.4	Using SE Tools Having the Capability to Share Data and Information	68
3.1.1.5	Establishing Well-Formed Sets of Needs and Design Input Requirements with an Underlying Data and Information Model	69
3.1.1.6	Defining a Project Ontology and Master Database Schema at the Beginning of the Project	69
3.1.1.7	Capturing Dependencies and Relationships	69
3.1.1.8	Using Tools That Allow Requirement Data to Be Referenced and Modeled	69
3.1.1.9	Using RMT and Modeling Tools That Help Ensure Need and Requirement Statements are Well-Formed	69
3.1.1.10	PM Work Products are Developed Concurrently with the Development of the SE Artifacts	70
3.1.2	Implementing the I-NRDM Approach	70
3.2	Expression of Text-Based Needs and Requirements within RMTS Versus Models and Diagrams	70
3.2.1	Expression of Text-based Needs and Requirements Within RMTs	71
3.2.1.1	Communication and Comprehension	71
3.2.1.2	Power of Expression	71
3.2.1.3	Managing Sets of Needs and Requirements	72
3.2.1.4	Use of Attributes	73
3.2.1.5	The Need for a Formal, Binding Agreement	73
3.2.1.6	Necessary for Acceptance, Qualification, Certification, and Approval for Use	73
3.2.2	Expressing Needs and Requirements Within Models and Diagrams	74
3.2.2.1	Analysis from Which Needs and Requirements are Derived	74
3.2.2.2	Completeness	74
3.2.2.3	Consistency	75
3.2.2.4	Identify and Manage Interdependencies	75
3.2.2.5	Support Simulations	75
3.2.2.6	Comprehensive System View	75
4	Lifecycle Concepts and Needs Definition	77
4.1	Introduction	77
4.1.1	Necessary for Acceptance	78
4.1.2	Lifecycle Concepts and Needs Definition Activities	78
4.1.3	Change Across the Lifecycle	80
4.1.4	Benefits of Lifecycle Concepts and Needs Definition Activities	81
4.2	Prepare for Lifecycle Concepts and Needs Definition	81
4.3	Define Inputs to Lifecycle Concepts Analysis and Maturation	82
4.3.1	Define the Problem, Threat, or Opportunity	83
4.3.2	Define Mission, Goals, Objectives (MGOs), and Measures	84
4.3.2.1	Mission Statement	85
4.3.2.2	Goals	86
4.3.2.3	Objectives	87

4.3.2.4	Measures	88
4.3.2.5	Special Considerations	89
4.3.2.6	Recording and Managing the MGOs and Measures	90
4.3.3	Identify External and Internal Stakeholders	90
4.3.3.1	Stakeholder Perspectives	93
4.3.3.2	Creating a Stakeholder Register	96
4.3.3.3	Stakeholder Considerations	96
4.3.4	Elicit Stakeholder Needs	99
4.3.4.1	Plan for Elicitation	99
4.3.4.2	Information to Be Elicited from Stakeholders	99
4.3.4.3	Use of Checklists	104
4.3.4.4	Elicitation Techniques and Methods	105
4.3.5	Document Elicitation Outcomes	106
4.3.5.1	Considerations Concerning the Elicitation Outcomes	107
4.3.5.2	Elicitation Completeness Checklist	110
4.3.6	Identify Drivers and Constraints	110
4.3.6.1	Standards and Regulations	111
4.3.6.2	Technology Maturity	116
4.3.6.3	Existing Systems	116
4.3.6.4	Higher-Level Lifecycle CNR	119
4.3.6.5	Budget and Schedule	119
4.3.6.6	Operational Environment	120
4.3.7	Identify, Assess, and Handle Risk	122
4.3.7.1	Types of Risk	122
4.3.7.2	Risk Assessment and Handling	127
4.4	Capture Preliminary Integrated Set of Lifecycle Concepts	130
4.4.1	Perspectives	132
4.4.1.1	Business/Project Management Perspective	133
4.4.1.2	Operational Perspective	133
4.4.1.3	System Perspective	133
4.4.2	Concept of Operations versus Operations Concept	134
4.4.3	Obtain Stakeholder Agreement	134
4.5	Lifecycle Concepts Analysis and Maturation	135
4.5.1	Feasibility	136
4.5.2	Design as Part of the Lifecycle Concepts Analysis and Maturation Activities	137
4.5.3	Use of Diagrams and Models for Analysis	138
4.5.3.1	Types of Diagrams and Models	139
4.5.3.2	Considerations When Developing Diagrams and Models	140
4.5.4	Examples of Functional/Activity Analysis Using Diagrams and Models	141
4.5.4.1	Fundamental System Model	141
4.5.4.2	Functional/Activity Flow Block Diagram	143
4.5.4.3	System Architecture Diagram	144
4.5.5	Levels of Detail and Abstraction	145
4.5.6	Completeness of the Lifecycle Concepts	147
4.5.7	Completeness, Correctness, Consistency, and Feasibility Considerations for SOIs Being Developed to Customer-Supplied System Requirements	149
4.5.8	Risk Assessment	150
4.5.9	Security	152

4.5.10	Human Systems Integration and Human Systems Engineering	152
4.5.11	Systems of Systems (SoS)	153
4.5.12	Standards and Regulations Compliance	153
4.5.13	Iteration to Mature Lifecycle Concepts	154
4.5.13.1	Model Development, Analysis, and Maturation	155
4.5.13.2	Trade Space – Define Candidate Physical Architectures	156
4.5.13.3	Physical Architecture Selection and Analysis	158
4.5.13.4	Zeroing in on a Feasible Architecture and Design	159
4.5.14	Activities Concurrent with Lifecycle Concepts Analysis and Maturation	160
4.6	Define and Record the Integrated Set of Needs	162
4.6.1	People and Process Needs	162
4.6.2	Needs and Requirements from Standards and Regulations	163
4.6.3	Define the Integrated Set of Needs	164
4.6.3.1	The Form of Need Statements	164
4.6.3.2	Including Goals Within the Integrated Set of Needs	165
4.6.3.3	Use of Attributes to Define and Manage Needs	165
4.6.3.4	Organizing the Integrated Set of Needs	166
4.6.4	Record the Integrated Set of Needs	170
4.6.4.1	Managing Unknowns	170
4.6.4.2	Appropriate to Level	171
4.6.4.3	Completeness of the Integrated Set of Needs	172
4.6.4.4	Needs Feasibility and Risk	173
4.7	Plan for System Validation	176
4.8	Baseline and Manage Lifecycle Concepts and Needs Definition Outputs	177
5	Needs Verification and Validation	179
5.1	Needs Verification	180
5.1.1	Prepare for Needs Verification	181
5.1.2	Perform Needs Verification	182
5.2	Needs Validation	184
5.2.1	Prepare for Needs Validation	184
5.2.2	Perform Needs Validation	185
5.3	Manage Needs Verification and Validation Results	186
5.4	Use of Attributes to Manage Needs Verification and Validation	187
6	Design Input Requirements Definition	189
6.1	Prepare for Design Input Requirements Definition	190
6.2	Perform Design Input Requirements Definition	191
6.2.1	Transforming Needs into Design Input Requirements	193
6.2.1.1	Organizing the Sets of Design Input Requirements	195
6.2.1.2	Considerations for Each Category of Requirement	196
6.2.1.3	Guidelines When Formulating Design Input Requirements	205
6.2.2	Establish Traceability	214
6.2.2.1	Traceability Defined	214
6.2.2.2	Using Traceability to Show Compliance with Standards and Regulations	216
6.2.2.3	Managing Traceability Within a Project’s Toolset	217

6.2.2.4	Parent/Child Traceability	218
6.2.2.5	Using Trace Matrices	219
6.2.2.6	Establishing Traceability Among Dependent Peer Requirements	219
6.2.2.7	Guidelines for Recording and Managing Traceability	221
6.2.2.8	Use of Traceability to Manage Requirements	222
6.2.2.9	Requirement Relationships Within Models	222
6.2.3	Defining Interactions and Recording Interface Requirements	223
6.2.3.1	What an Interface “Is”	225
6.2.3.2	What an Interface “Is Not”	226
6.2.3.3	Step 1: Identify the Interface Boundaries	227
6.2.3.4	Step 2: Define the Interactions Across the Interface Boundary	230
6.2.3.5	Step 3: Write the Interface Requirements	236
6.2.3.6	Using RMTs to Manage Interfaces	240
6.2.3.7	Common Interface Requirement Defects and Issues	241
6.2.3.8	Interface Requirements Audit	242
6.2.4	Use of Attributes to Develop and Manage Design Input Requirements	245
6.2.4.1	Inheritance	245
6.2.5	Plan for System Verification	245
6.2.6	Finalize Design Input Requirements Definition	246
6.2.6.1	Record the Design Input Requirements	246
6.2.6.2	Completeness, Correctness, and Consistency	247
6.2.6.3	Requirements Feasibility and Risk	248
6.3	Baseline and Manage Design Input Requirements	252
6.4	Architectural Levels, Flow Down, Allocation, and Budgeting	257
6.4.1	Moving Between Levels of the Architecture	258
6.4.2	Product Breakdown Structure and Document Tree	258
6.4.3	Allocation—Flow Down of Requirements	261
6.4.3.1	Software-Intensive System Architecture	263
6.4.3.2	Allocation Matrix	266
6.4.4	Defining Child Requirements That Meet the Intent of the Allocated Parents	268
6.4.5	Budgeting of Performance, Resource, and Quality Requirements	269
6.4.5.1	Allocations and Budgets Across Interface Boundaries	271
6.4.6	Budget Management: The Use of Margins	272
6.4.7	The SE Vee Model and Moving Between Levels	273
6.4.8	Combining Traceability and Allocation to Manage Requirements	273
6.5	Summary of Design Input Requirements Definition	275
7	Requirements Verification and Validation	277
7.1	Requirements Verification	278
7.1.1	Prepare for Requirements Verification	279
7.1.2	Perform Requirements Verification	280
7.2	Requirements Validation	283
7.2.1	Prepare for Requirements Validation	283
7.2.2	Perform Requirements Validation	284
7.3	Manage Requirements Verification and Validation Results	286
7.4	Use of Attributes to Manage Requirements Verification and Validation	286

8	Design Verification and Design Validation	289
8.1	Design Definition Process Overview	290
8.2	Early System Verification and Validation	293
8.2.1	Modeling and Simulation Challenges	295
8.3	Updating System Verification and Validation Artifacts	295
8.4	Design Verification	296
8.4.1	Prepare for Design Verification	297
8.4.2	Perform Design Verification	298
8.5	Design Validation	299
8.5.1	Prepare for Design Validation	300
8.5.2	Perform Design Validation	301
8.6	Manage Design Verification and Validation Results	302
8.7	Use of Attributes to Manage Design Verification and Design Validation	303
9	Production Verification	305
9.1	Production Verification Defined	305
9.2	Scalability, Repeatability, and Yield	306
9.3	Production Verification Versus System Verification	307
9.4	Verification and Validation of the Manufacturing System	308
9.5	Special Considerations	308
9.6	Production Verification	310
10	System Verification and Validation Common Principles	311
10.1	Planning Stage	315
10.1.1	Define the System Verification and Validation Success Criteria	316
10.1.1.1	Formulating the Success Criteria Statement	316
10.1.1.2	Considerations for Defining Success Criteria	319
10.1.2	Determine the Strategy	321
10.1.2.1	Considerations When Determining the Strategy	322
10.1.2.2	System Verification and Validation Using Models	327
10.1.2.3	Strategy Impacts on Design	328
10.1.2.4	Addressing Enabling Systems	328
10.1.2.5	System Integration Approach	329
10.1.2.6	Preliminary versus Final System Verification and Validation	330
10.1.2.7	Embedded Software System Verification and Validation Challenges	332
10.1.3	Select a System Verification or System Validation Method	333
10.1.3.1	Test	333
10.1.3.2	Demonstration	335
10.1.3.3	Inspection or Examination	335
10.1.3.4	Analysis	336
10.1.3.5	Questions Associated with Each Method	341
10.1.3.6	Considerations When Selecting a Method	341
10.1.4	Defining Each Instance	343
10.1.5	System Verification and Validation Matrices	344

10.2	Defining Stage	345
10.2.1	Defining Each <i>Activity</i>	346
10.2.2	Gathering the Information Needed to Develop the Procedures	347
10.2.3	Procedure Development	350
10.2.4	Scheduling the System Verification or Validation <i>Event</i>	352
10.3	Execution Stage: Performing the <i>Procedures</i>	352
10.3.1	Formal System Verification and Validation Processes	353
10.3.2	Discrepancies and Nonconformances	355
10.3.3	Variations, Concessions, Waivers, and Deviations	356
10.3.3.1	Deviations and Waivers	356
10.3.3.2	Variance Management	357
10.4	Reporting Stage: Documenting the Results	358
10.4.1	Chain of Evidence Showing Conformance or Compliance	360
10.4.2	Use of Compliance Matrices	361
10.5	Approval Stage	362
10.6	Use of Attributes to Manage System Verification and Validation Activities	363
10.7	Maintaining the System Verification and Validation Artifacts	364
11	System Verification and System Validation Processes	367
11.1	System Verification and Validation per Level	368
11.2	Managing the Project's System Verification and Validation Programs	370
11.3	System Verification Activities	371
11.3.1	Prepare for System Verification—Planning and Defining	371
11.3.2	Perform System Verification Activities—Execution	372
11.3.3	Manage System Verification Results—Reporting and Approval	373
11.4	System Validation Process	374
11.4.1	General Considerations	374
11.4.1.1	Operational and Loss Scenarios and Use and Misuse Cases	374
11.4.1.2	Assessing System Behavior and Emerging Properties	374
11.4.2	Prepare for System Validation—Planning and Defining	375
11.4.3	Perform System Validation Activities—Execution	376
11.4.4	Manage System Validation Results—Recording and Approval	377
12	The Use of OTS System Elements	379
13	Supplier-Developed SOI	385
13.1	Customer/Supplier Relationships	385
13.1.1	Fixed-Price, Performance-Based Contract	386
13.1.2	Cost-Reimbursement, Performance-Based Contract	387
13.1.3	Cost-Reimbursement, Level of Effort/Term Contract	387
13.1.4	Contracting for Specific Lifecycle Activities	388
13.1.5	Customer Versus Supplier Roles	388
13.1.6	Consequences Resulting from Poorly Written Contracts	389
13.2	Customer/Supplier Verification Versus Validation Considerations	392
13.2.1	Customer Is Responsible for System Validation	392
13.2.2	Supplier Is Responsible for System Validation	393
13.2.3	Addressing the Amount of Supplier-Performed System Validation	393
13.2.4	Expecting System Validation Only	394
13.3	Addressing the Evolutionary Nature of Interface Definitions	395

14 Needs, Requirements, Verification, and Validation Management	397
14.1 Prepare for Needs, Requirements, Verification, and Validation Management	399
14.1.1 PM and SE Plans	399
14.1.2 Needs and Requirements Definition and Management Plan	400
14.1.3 System Verification and Validation Management Plans	401
14.1.4 Configuration Management Plan	402
14.2 Perform Needs, Requirements, Verification, and Validation Management	402
14.2.1 Baseline Needs, Requirements, and Specifications	403
14.2.2 Monitoring the Status of Needs, Requirements, and Specifications	405
14.2.3 Controlling the Needs, Requirements, and Specifications	406
14.2.4 Manage Unknowns	406
14.2.5 Manage Change	408
14.2.5.1 Control Needs and Requirements Creep	410
14.2.5.2 Why Needs and Requirements Change	411
14.2.5.3 Change Management Across the Lifecycle	413
14.2.5.4 Change Impact Analysis	414
14.2.6 Manage and Control of Flow Down, Allocation, and Budgeting	416
14.2.7 Combine Allocation and Traceability to Manage Requirements	417
14.2.8 Manage and Control Interfaces	420
14.2.8.1 Best Practices Associated with Managing Interfaces	422
14.2.9 Manage and Control System Verification and Validation Activities	423
15 Attributes for Needs and Requirements	427
15.1 Attributes to Help Define Needs and Requirements and Their Intent	428
15.2 Attributes Associated with System Verification and System Validation	430
15.3 Attributes to Help Manage the Needs and Requirements	432
15.4 Attributes to Show Applicability and Enable Reuse	440
15.5 Attributes to Aid in Product Line Management	441
15.6 Guidance for Using Attributes	442
16 Desirable Features of an SE Toolset	445
16.1 Choosing an Appropriate Toolset	445
16.2 Desirable Features of an SE Toolset	447
16.2.1 Functionality	448
16.2.2 Tool Attributes	450
16.2.3 Management and Reporting	453
16.2.4 General Considerations	454
Appendix A: References	455
Appendix B: Acronyms and Abbreviations	459
Appendix C: Glossary	465
Appendix D: Comment Form	487

INCOSE NOTICES

This INCOSE Technical Product was prepared by the International Council on Systems Engineering (INCOSE). It is approved by the INCOSE Technical Operations Leadership for release as an INCOSE Technical Product.

Author Use. Authors have full rights to use their contributions in a totally unfettered way with credit to the INCOSE Technical source. Abstraction is permitted with credit to the source.

INCOSE Use. Permission to reproduce and use this document or parts thereof by members of INCOSE and to prepare derivative works from this document for INCOSE use is granted, with attribution to INCOSE and the original author(s) where practical, provided this copyright notice is included with all reproductions and derivative works.

External Use. This document may not be shared or distributed to any non-INCOSE third party. Requests for permission to reproduce this document in whole or part, or to prepare derivative works of this document for external and commercial use should be addressed to the INCOSE Central Office, 7670 Opportunity Rd., Suite 220, San Diego, CA 92111-2222.

Electronic Version Use. Any electronic version of this document is to be used for personal, professional use only and is not to be placed on a non-INCOSE sponsored server for general use.

Any additional use of these materials must have written approval from INCOSE Central.

ADDITIONAL COPIES/GENERAL INFORMATION

Copies of the *Needs and Requirements Manual*, as well as any other INCOSE document can be obtained from the INCOSE Store. General information on INCOSE, the Requirements Working Group, any other INCOSE working group, or membership may also be obtained from the INCOSE Central Office at:

PREFACE

This Manual has been prepared and produced by a volunteer group of authors and contributors within the Requirements Working Group (RWG) of the International Council on Systems Engineering (INCOSE).

AUTHORS

The principal authors of this Manual are:

Lou Wheatcraft, Wheatland Consulting, LLC, USA

Michael Ryan, Capability Associates Pty Ltd, AU

Tami Katz, BAE Systems, USA

MAJOR CONTRIBUTORS

Those who made a significant contribution to the generation of this Manual are:

Mark Abernathy, Retired, USA

James R. Armstrong, Stevens Institute of Technology, USA

Brian Berenbach, Georgia Institute of Technology, USA

Simone Bergamo, Thales, FR

Ronald S. Carson, PhD, Seattle Pacific University, USA

Jeremy Dick, Retired, UK

Celeste Drewien, Sandia National Labs, USA

James R. van Gaasbeek, Retired, USA

Rick D. Hefner, Caltech, USA

Henrick Mattfolk, Whirlpool, USA

Lamont McAliley, Veracity Engineering, USA

Donald McNally, Woodward, USA

Kevin E. Orr, Eaton Corporation, USA

Michael E. Pafford, Retired, USA

Susan E. Ronning, ADCOMM Engineering LLC, USA

Raymond B. Wolfgang, Sandia National Labs, USA

Gordon Woods, East West Railway Company, UK

Richard Zinni, Harris Corporation, USA

REVIEWERS

In addition to the authors and contributors, below are the names of those who submitted review comments that were included during the development of this Manual:

Angel Agrawal, Northrop Grumman, USA

Ben Canty, Ball Aerospace and Technologies Corporation, USA

James B. Burns, Johns Hopkins University, USA

Ken Eastman, Ball Aerospace and Technologies Corporation, USA

Raymond Joseph, Odfjell Terminal, Houston, USA

Jenn Molloy, Ball Aerospace and Technologies Corporation, USA

Michele Reed, Shell Products and Technology, USA

Andreas Vollerthun, Dr., KAIAO-Consulting, DE

Beth Wilson, retired, USA

REVISION HISTORY

Revision	Revision Date	Change Description and Rationale
1.0	January 2022	First release
1.1	May 2022	Editorial and alignment with other RWG products
2.0	November 2024	Major update based on use and comments and alignment with other RWG products.

LIST OF FIGURES

- 1.1. Relationships Between INCOSE Requirements Working Group (RWG) Products and the INCOSE SE HB and SEBoK.
- 1.2. Relationship of INCOSE SE HB Technical Processes and NRVV Activities Discussed in this Manual.
 - 2.1. Lifecycle Concepts, Integrated Set of Needs, and Design Input Requirements.
 - 2.2. Needs Versus Requirements—Different Perspectives.
 - 2.3. NRVV Activity Relationships to the INCOSE SE HB.
 - 2.4. Entity–Relationship Diagram for Customers, Concepts, Entities, Needs, and Requirements Terms.
 - 2.5. Entity–Relationship Diagram for Needs and Requirements Terms.
 - 2.6. Levels in the Context of an Organization.
 - 2.7. Portfolio of Projects Within the Operational Level.
 - 2.8. Supplier-Developed System.
 - 2.9. Levels of a System—Hierarchical View.
 - 2.10. Interactions and Dependences Internal and External to a System.
 - 2.11. Holistic View of the SOI.
 - 2.12. Verification and Validation Confirm that SE Artifacts Generated During Transformation are Acceptable.
 - 2.13. Needs Verification and Validation.
 - 2.14. Post-production Verification and Validation.
 - 2.15. Lifecycle Processes in Relation to the SE Vee Model.
 - 2.16. Integrated, Multidiscipline, Collaborative Project Team.
 - 2.17. Project Team Organization.
 - 2.18. Communications Model [18, 19].
 - 2.19. System Development Activities Across the Lifecycle.

- 3.1. I-NRDM + MBD = MBSE.
- 3.2. Information-based Requirement Development and Management Model.
- 4.1a. Lifecycle and Needs Definition Activities Part 1.
- 4.1b. Lifecycle and Needs Definition Activities Part 2.
- 4.2. *Lifecycle Concepts and Needs Definition* IPO Diagram.
- 4.3. Example Context Diagram, Boundary Diagram, and External Interface Diagram.
- 4.4. Inputs to the Lifecycle Concepts Analysis and Maturation Activities.
- 4.5. Fundamental System Model.
- 4.6. Functional/Activity Analysis using a SIPOC Diagram.
- 4.7. Generic Functional Flow Block Diagram or Activity Flow Diagram.
- 4.8. System Architecture Diagram.
- 4.9. The Line Between Design Inputs and Design Outputs.
- 4.10. Input/output Risk Assessment.
- 4.11. Zeroing in on a Set of Feasible Lifecycle Concepts, Needs, and Architecture.
- 4.12. Provided Capability Includes People, Process, and Products.
- 4.13. Sources of the Integrated Set of Needs.
- 4.14. Needs Feasibility/Risk Bucket.
- 5.1. Needs Verification and Needs Validation Overview.
- 5.2. Needs Verification IPO Diagram.
- 5.3. Needs Validation IPO Diagram.
- 6.1. Design Input Requirements Definition IPO Diagram.
- 6.2. Design Input Requirement Definition Activities.
- 6.3. Function with Multiple Performance Characteristics.
- 6.4. The “Line” Between Design Inputs and Design Outputs.
- 6.5. The “Line” Within a System Architecture.
- 6.6. SOI Requirements “Trace to Source” Includes Parent Requirements and Needs.
- 6.7. Traceability Relationship Meta-model.
- 6.8. Example Requirement Parent/Child Trace.
- 6.9. Complexity is a Function of the Number of Interactions Among System Elements.
- 6.10. An Interface is a Boundary, Not a Thing.
- 6.11. Example External Interface, Context, or Boundary Diagram.
- 6.12. Example System-to-System Interface Diagram.
- 6.13. New System 2 Interactions with an Existing System 1.
- 6.14. New System 2 and System 3 Interactions.
- 6.15. Interactions Between the Spacecraft Bus and the Payload.
- 6.16. Interface Requirement Traceability.
- 6.17. Requirements Feasibility/Risk Bucket.
- 6.18. PBS and Associated Sets of Engineering Artifacts.
- 6.19. Document Tree Diagram Example for the Lid Installation Robot.

- 6.20. Flow down of Design Input Requirements via Allocation and Budgeting.
- 6.21. Requirements At One Level Drive the Requirements at the Next Level.
- 6.22. Alternate Architecture for Software-Intensive Systems.
- 6.23. Architecture for a Medical Diagnostic System.
- 6.24. Allocation and Budgeting Example.
- 6.25. Allocation and Budgeting Dependencies.
- 6.26. Allocation and Budgeting Across Interface Boundaries.
- 6.27. System Architecture Hierarchy Mapped to the SE Vee Model.
- 7.1. Design Input Requirement Verification and Validation.
- 7.2. Requirement Verification IPO Diagram.
- 7.3. Requirement Validation IPO Diagram.
- 8.1. Design Verification and Validation.
- 8.2. Zeroing in On a Feasible Design and Physical Architecture.
- 8.3. Design Verification IPO Diagram.
- 8.4. Design Validation IPO Diagram.
- 9.1. Production Verification.
- 9.2. Production Verification IPO Diagram.
- 10.1. System Verification and Validation Stages.
- 10.2. System Verification and Validation Process Artifacts.
- 10.3. Success Criteria Influence on System Verification and Validation Planning and Implementation.
- 10.4. Iterative Relationship Between Success Criteria, Strategy, and Method.
- 10.5. Procedure Development IPO Diagram.
- 10.6. Visualizations of the Project's System Verification and Validation Data and Information.
- 11.1. System Verification and Validation Processes.
- 11.2. Bottom-up View of System Verification and Validation.
- 11.3. System Verification IPO Diagram.
- 11.4. Holistic view of the SOI.
- 11.5. System Validation IPO Diagram.
- 12.1. OTS Determination as Part of Architecture and Design.
- 12.2. OTS Evaluation for Usage [63].
- 13.1. Contract Type and Approach.
- 14.1. Needs, Requirements, Verification, and Validation Management IPO Diagram.
- 14.2. Needs, Requirements, Verification, and Validation Management Activities.
- 16.1. Establishing Traceability Between Data and Information From Different Tools.

LIST OF TABLES

- 1.1. NRVV Use Cases.
- 1.2. NRVV Activities as Addressed by Various Organizations and Standards.
- 2.1. Verification and Validation Definitions in Context.
- 2.2. Verification and Validation Comparisons in Terms of Outcomes.
- 4.1. Potential Stakeholders over the System Lifecycle.
- 4.2. Example Stakeholders' Perspectives and Concerns.
- 4.3. Example Checklist for an Elicitation Session.
- 4.4. Preliminary Integrated Set of Lifecycle Concepts.
- 6.1. Needs-to-Requirements Transformation Matrix.
- 6.2. Example LIR Trace Matrix.
- 6.3. Interface Requirements Audit Spreadsheet.
- 6.4. Example Interface Requirements Audit.
- 6.5. Example Allocation Matrix.
- 10.1. Tracking Preliminary and Final System Verification and Validation Status.
- 10.2. Example System Validation Matrix (SVaM).
- 10.3. Example System Verification Matrix (SVM).
- 10.4. Example System Verification Compliance Matrix (SVCM).
- 15.1. Example Implementation Status Recording and Reporting.

1

INTRODUCTION

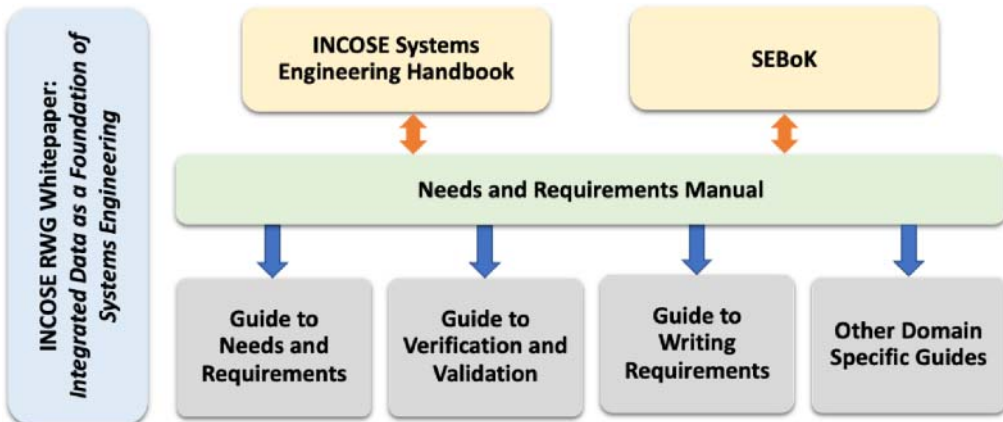

1.1 PURPOSE

This Needs and Requirements Manual (NRM) presents systems engineering (SE) from the perspective of the definition and management across the system lifecycle of needs, requirements, verification, and validation (NRVV). NRVV are common threads that tie together all lifecycle activities and processes.

As presented in this Manual, for acceptance, certification, and qualification, the system or product being developed is verified against design input requirements and validated against its integrated set of needs. To successfully complete system verification and system validation, the needs and requirements of the system as well as the system verification and validation artifacts must be managed throughout the entire system lifecycle. This Manual provides practical guidance on the concepts and activities required to achieve those outcomes.

As shown in Figure 1.1, this Manual supplements and elaborates the INCOSE Systems Engineering Handbook (SE HB) [1] and the Systems Engineering Body of Knowledge (SEBoK) [2], providing more detailed guidance on the “what,” “how,” and “why” concerning NRVV across the system lifecycle. The NRM also addresses ambiguity and inconsistencies in NRVV terminology and ontology.

Figure 1.1 shows this Manual is further elaborated by several supporting guides. The *Guide to Needs and Requirements* (GtNR) [3] and the *Guide to Verification and Validation* (GtVV) [4] focus further on the “what” and “how” of the specific processes being implemented within an organization. The level of detail is similar in content to an organization’s Work Instructions (WIs) or Standard Operating Procedures (SOPs). These guides reference this Manual for specific guidance on the “why” and underlying concepts, maintaining consistency in approach and ontology defined in this Manual.

FIGURE 1.1 Relationships Between INCOSE Requirements Working Group (RWG) Products and the INCOSE SE HB and SEBoK.

Although this Manual addresses the activities and underlying analysis associated with defining individual and sets of needs and design input requirements, the actual writing of the need and requirement statements is covered in the INCOSE *Guide to Writing Requirements* (GtWR) [5]. The GtWR includes a list of key characteristics of well-formed needs and requirements, as well as a set of rules that can help achieve those characteristics. Throughout this Manual, when the activities being discussed contribute to a given characteristic defined in the GtWR, a trace to that characteristic is included.

Figure 1.1 also shows that this Manual and the associated guides advocate a data-centric approach to Project Management (PM) and SE as defined in the INCOSE RWG Whitepaper *Integrated Data as a Foundation of Systems Engineering* [6], as discussed in Chapter 3 of this Manual.

1.2 SCOPE

To support PM and SE from an NRVV perspective, this Manual:

- Provides PM and SE practitioners with an understanding of the best practices for effective NRVV definition and management throughout the system lifecycle.
- Helps organizations understand that NRVV are key elements of SE activities.
- Provides guidance to the successful implementation of NRVV activities as part of PM and SE, in any domain.
- Reinforces the idea that adequate definition of lifecycle concepts and a well-formed set of needs is a prerequisite to the definition of a well-formed set of system design input requirements.
- Provides practical, cross-domain guidance to enable organizations to integrate best practices and concepts within their PM and SE processes, activities, WIs, and procedures.
- Provides a clear description of how the terms verification and validation are applied to the artifacts generated across the system lifecycle.
- Describes the importance of planning early for verification and validation activities across the lifecycle and the inclusion of verification and validation artifacts in system models.

- Provides thorough guidance to readers on planning, definition, execution, and reporting of verification and validation activities across the system lifecycle.
- Provides guidance and best practices that will help customers avoid accumulating technical debt and enable projects and suppliers to deliver a winning product.
- Presents a data-centric approach to NRVV definition and management.
- Provides guidance for organization- and enterprise-wide sharing of data and information associated with developing and managing an integrated set of needs, the resulting design input requirements, and design output specifications, as well as verification and validation artifacts throughout the system lifecycle.

1.3 AUDIENCE

This Manual is intended for those whose role is to perform NRVV activities throughout the system lifecycle. This includes those who *verify* that the design and realized System of Interest (SOI) meet the requirements and those who *validate* that the requirements, design, and realized SOI meet the needs in the intended operational environment when used by the intended users and mitigate risk of any misuse of the SOI and losses because of misuse.

This Manual is addressed to practitioners of all levels of experience. Someone new to PM and SE should find the specific guidance useful, and those more experienced should be able to find new insights concerning NRVV across all stages of the system lifecycle, which is often absent from other texts, guides, or standards, particularly in terms of a data-centric perspective.

Major user groups who will benefit from the use of this Manual include systems engineers, requirements engineers, business analysts, product developers, system architects, configuration managers, designers, testers, verifiers, validators, manufacturers, coders, operators, users, disposers, course developers, trainers, tool vendors, project managers, acquisition personnel, lawyers, regulators, and standards organizations. Specific use cases for various classes of readers are shown in Table 1.1.

1.4 APPROACH

While this Manual addresses the specific application of the activities and concepts associated with NRVV, the specifics of “how” this information is applied are not prescribed. For example, while the use of models and a data-centric approach is advocated, the specifics concerning how to implement these concepts within the project’s toolset are not addressed; while the use of Requirement Management Tools (RMTs) is advocated, the specifics concerning any particular RMT are not discussed. In this regard, this Manual is structured to enable other INCOSE Working Groups (WGs) and tool vendors to develop domain or tool-specific guides that tailor these contents to best fit the needs of the organization.

There are many use cases for how organizations practice SE to develop systems and products. This Manual presents a generic set of concepts and activities that can be applied. It is not intended that organizations adopt all the activities presented, but rather use the best practices presented to tailor their product development activities and processes appropriate to their domain, product line, workforce, and culture in such a way that provides the most value. For additional guidance concerning tailoring, refer to Chapter 4 of the INCOSE SE HB [1].

TABLE 1.1 NRVV Use Cases.

Reader	Use Cases
Novice practitioners: those new to SE and NRVV	<ul style="list-style-type: none"> • Learn and understand NRVV terminology, concepts, and best practices • Access a structured, unambiguous, and comprehensive source of information and knowledge to help learn NRVV from a data-centric perspective • Learn a consistent and unambiguous ontology (meta-model) for NRVV
Seasoned practitioners: those experienced in SE and NRVV but not from a data-centric perspective	<ul style="list-style-type: none"> • Gain more in-depth understanding of NRVV from a data-centric perspective • Reinforce, refresh, build upon, and renew their NRVV knowledge • Tailor the concepts in the NRM to their organization’s product line, processes, and culture • Adopt the NRVV best practices presented in this Manual
Course developers/educators/trainers: individuals or organizations that specialize in training practitioners and other stakeholders in NRVV processes and tools	<ul style="list-style-type: none"> • Use this Manual to help mentor novice practitioners in the realm of NRVV • Use a structured, unambiguous, and comprehensive source of information and knowledge to help teach NRVV from a data-centric perspective • Suggest relevant NRVV topics to trainers for their course content • Present a consistent and unambiguous ontology for NRVV. • Lead SE curricula development and revision inside their own organizations based on best practices and knowledge presented in this Manual
Tool vendors: organizations that provide applications that enable the data-centric practice of SE	<ul style="list-style-type: none"> • Implement recommended features in a toolset to enable practitioners to develop and manage NRVV across the system lifecycle from a data-centric perspective • Align their PM and SE toolset products with a comprehensive set of NRVV activities and artifacts and underlying data and information • Apply Artificial Intelligence (AI) as a “digital assistant,” helpful in the performance of the activities defined in this Manual
Project managers: those who manage product development projects	<ul style="list-style-type: none"> • Understand overall product development lifecycle processes from the perspective of SE and NRVV • Understand what a data-centric practice of SE means and its advantages • Understand the value and importance of SE and NRVV activities to project success—and the importance of budgeting for and scheduling such activities • Understand how measures and metrics managed within the SE toolset can help better manage product development projects • Provide an accurate and comprehensive SE and NRVV reference, for both training and practitioner use • Provide more accurate cost and schedule estimates for complex systems engineering projects • Suggest cost and schedule savings to complex systems engineering projects, even without an engineering background
