## About the Author

**Paul McFedries** is a full-time technical writer. Paul has been authoring computer books since 1991, and he has more than 100 books to his credit. Paul's books have sold more than four million copies worldwide. These books include the Wiley titles *Teach Yourself VISUALLY Microsoft 365, Second Edition*; *Windows 10 Portable Genius*; *Office 365 All-in-One For Dummies*; *Google Workspace For Dummies*; *HTML, CSS, & JavaScript All-in-One For Dummies*; and *Web Coding & Development For Dummies*. Paul invites you to drop by his personal website at <https://paulmcfedries.com>.

## Author's Acknowledgments

It goes without saying that writers focus on text, and I certainly enjoyed focusing on the text that you'll read in this book. However, this book is more than just the usual collection of words and phrases. A quick thumb-through the pages will show you that this book is also chock full of images, from sharp screenshots to fun and informative illustrations. Those colorful images sure make for a beautiful book, and that beauty comes from a lot of hard work by Wiley's immensely talented group of designers and layout artists. I thank them for creating another gem. Of course, what you read in this book must also be accurate, logically presented, and free of errors. Ensuring all of this was an excellent group of editors that included project manager Sarah Hellert, technical editor Eric Butow, copy editor Kim Wimpsett, managing editor Moses Ashirvad, and content refinement specialist Saravanan Dakshinamurthy. Thanks to all of you for your exceptional competence and hard work. Thanks, as well, to acquisitions editor Jim Minatel for asking me to write this book.

# How to Use This Book

## Who This Book Is For

This book is for the reader who has never used this particular technology or software application. It is also for readers who want to expand their knowledge.

## The Conventions in This Book

### 1 Steps

This book uses a step-by-step format to guide you easily through each task. Numbered steps are actions you must do; bulleted steps clarify a point, step, or optional feature; and indented steps give you the result.

### 2 Notes

Notes give additional information — special conditions that may occur during an operation, a situation that you want to avoid, or a cross reference to a related area of the book.

### 3 Icons and Buttons

Icons and buttons show you exactly what you need to click to perform a step.

### 4 Tips

Tips offer additional information, including warnings and shortcuts.

### 5 Bold

**Bold** type shows command names, options, and text or numbers you must type.

### 6 Italics

*Italic* type introduces and defines a new term.

### Change the Theme

You can add visual interest to Windows by changing the theme. The Windows theme is a set of preferences that includes the desktop background image, the Windows accent color, and whether the interface and apps use light mode (bright colors that work best in daylight or a well-lit room) or dark mode (dark colors that work best at night or in a poorly lit room).

Rather than changing the entire theme, you might prefer to customize only the desktop background. In the Settings app, you can change the background to an image, a solid color, or a slideshow of your photos.

#### Change the Theme

- 1 Open the Settings app.  
**Note:** Refer to the section "Open the Settings App" earlier in this chapter.
- 2 Click **Personalization**.  
Settings displays the Personalization screen.
- 3 Click the theme you want to apply.  
Windows applies the new theme.

### Change the Desktop Background

- 1 In the Personalization screen, click **Background**.
- 2 Click the **Personalize your background** (v changes to ^) and then click the type of background you want:  
**Picture:** Displays an image as the background. Click a picture in the Recent Images section or click **Browse photos** to select one of your photos.  
**Solid color:** Displays a color as the background. Click a color swatch or click **View colors** to create a color.  
**Slideshow:** Displays a series of images from your Pictures folder as the background.  
**Windows spotlight:** Displays a series of photos curated by Microsoft.
- 3

#### TIPS

##### Can I just choose either dark mode or light mode?

Yes. In the Settings app's Personalization screen, click **Colors**, click the **Choose your mode** v, and then click either **Light** or **Dark**.

##### What does the accent color do?

The accent color is the background color that appears for selected option buttons, check boxes, and switches, as well as interface elements such as links and badges. To set the accent color, display the Settings app's Personalization screen, click **Colors**, and then click a color. To show the accent colors on your app title bars and borders, click the **Show accent color on title bars and window borders** switch to **On** (o changes to a).

# Table of Contents

Chapter 1

Getting Started with Windows

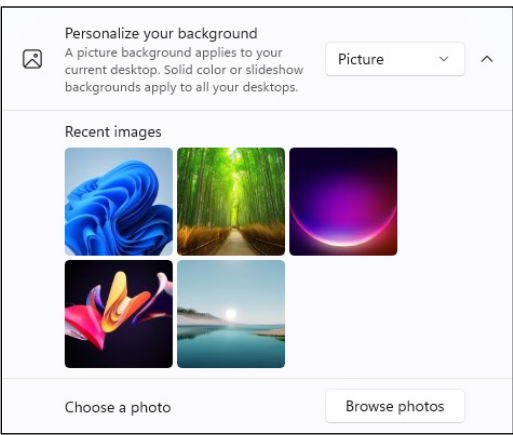

|                                       |    |
|---------------------------------------|----|
| Explore the PC Screen .....           | 4  |
| Explore the Start Menu .....          | 5  |
| Start and Close an App .....          | 6  |
| Connect to Your Wireless Network..... | 8  |
| Put Windows to Sleep .....            | 10 |
| Restart or Shut Down Windows.....     | 11 |
| Switch to a Microsoft Account.....    | 12 |
| Install an App .....                  | 16 |
| Switch Between Running Apps .....     | 18 |
| Arrange Running Apps .....            | 20 |
| Uninstall an App.....                 | 22 |

Chapter 2

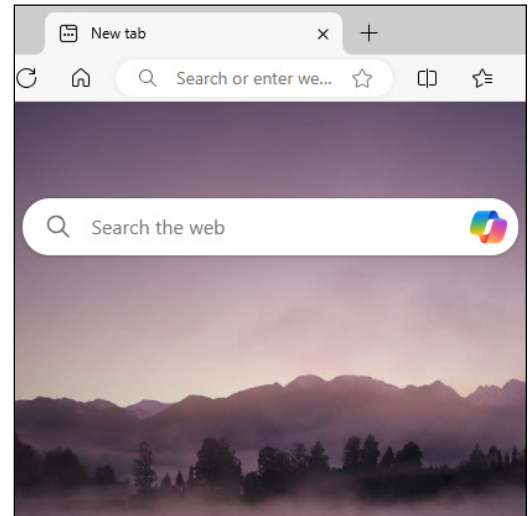

Customizing Windows

|   |    |
|---|----|
| Pin an App to the Start Menu.....                     | 26 |
| Open the Settings App.....                            | 28 |
| Change the Lock Screen Background.....                | 30 |
| Choose a Lock Screen Status App.....                  | 32 |
| Customize Syncing Between Devices .....               | 34 |
| Access an App’s Features.....                         | 36 |
| Pin an App to the Taskbar .....                       | 38 |
| Change the Theme.....                                 | 40 |
| Adjust the Volume.....                                | 42 |
| Set the Time Zone .....                               | 43 |
| Configure Windows to Work with Multiple Monitors..... | 44 |
| Customize the Taskbar .....                           | 46 |
| Work with Widgets .....                               | 48 |
| Set Up Multiple Desktops .....                        | 50 |

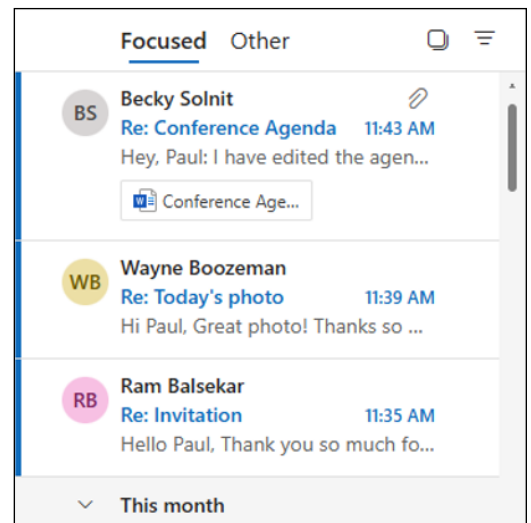

## Chapter 3 Surfing the Web

|  |    |
|--|----|
| Open a Web Page .....                    | 54 |
| Open a Web Page in a Tab .....           | 56 |
| Navigate Web Pages.....                  | 58 |
| Find Text on a Page .....                | 59 |
| Navigate with the History List.....      | 60 |
| Change Your Startup Page.....            | 62 |
| Save Favorite Web Pages .....            | 64 |
| Take Advantage of the Favorites Bar..... | 66 |
| Share a Web Page.....                    | 68 |
| Search for Sites .....                   | 70 |
| Download a File .....                    | 72 |

## Chapter 4 Sending and Receiving Email

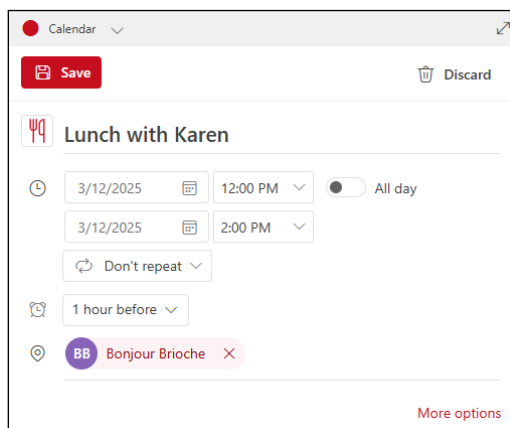

|   |     |
|---|-----|
| Launch the Outlook App.....               | 76  |
| Add Your Microsoft Account .....          | 77  |
| Configure More Email Accounts.....        | 78  |
| Send an Email Message .....               | 80  |
| Format the Message Text .....             | 82  |
| Add a File Attachment .....               | 84  |
| Save a Draft of a Message.....            | 86  |
| Receive and Read Email Messages .....     | 88  |
| Reply to a Message.....                   | 90  |
| Forward a Message .....                   | 92  |
| Open and Save an Attachment .....         | 94  |
| Delete a Message .....                    | 96  |
| Create a Folder for Saving Messages ..... | 98  |
| Configure Outlook Settings .....          | 100 |

## Chapter 5 Getting Social with Windows

|  |     |
|--|-----|
| Create a Contact .....                       | 104 |
| Import Contacts.....                         | 106 |
| View a Contact .....                         | 108 |
| Edit a Contact .....                         | 110 |
| Assign a Photo to a Contact .....            | 112 |
| Add Extra Fields to a Contact .....          | 114 |
| Create a Contact List .....                  | 116 |
| View Your Calendar .....                     | 118 |
| Add an Event to Your Calendar .....          | 120 |
| Create a Recurring Event .....               | 122 |
| Add an Event Reminder .....                  | 123 |
| Send or Respond to an Event Invitation ..... | 124 |
| Customize Your Calendar .....                | 126 |

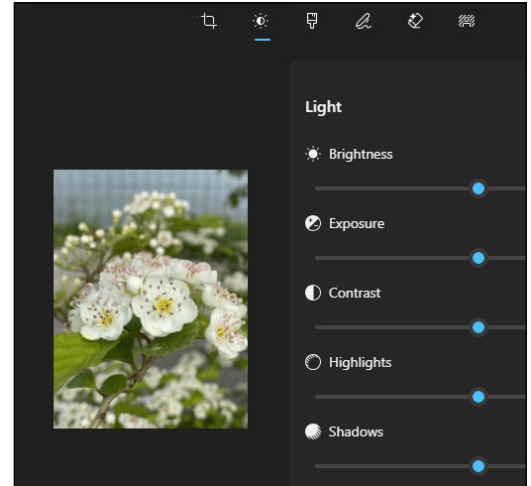

## Chapter 6 Performing Day-to-Day Tasks with Apps

|  |     |
|--|-----|
| Search Your PC.....                        | 130 |
| Write a Note.....                          | 132 |
| Make a To-Do List.....                     | 134 |
| Display a Location on a Map .....          | 136 |
| Get Directions to a Location .....         | 138 |
| Check Your Weather Forecast.....           | 140 |
| Check Another City's Weather Forecast..... | 142 |
| Perform Calculations.....                  | 144 |
| Record a Voice Memo .....                  | 146 |
| Set an Alarm .....                         | 148 |

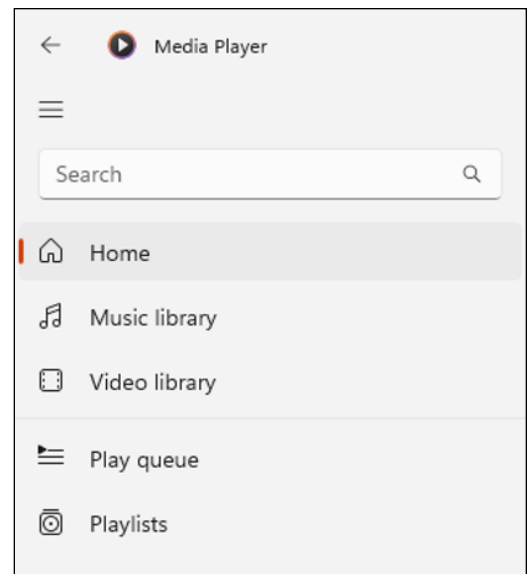

## Chapter 7 Working with Images

|   |     |
|---|-----|
| Import Images from a Digital Camera ..... | 152 |
| Scan an Image.....                        | 154 |
| Navigate the Pictures Folder .....        | 156 |
| View Your Images.....                     | 158 |
| Start a Slide Show .....                  | 160 |
| Mark a Photo as a Favorite .....          | 161 |
| Repair an Image .....                     | 162 |
| Add a Photo Effect .....                  | 164 |
| Crop an Image.....                        | 166 |
| Rotate an Image .....                     | 168 |
| Delete an Image .....                     | 169 |
| Print an Image .....                      | 170 |
| Take a Picture with Your PC Camera .....  | 172 |

## Chapter 8 Working with Multimedia

|   |     |
|---|-----|
| Import Videos from a Digital Camera ..... | 176 |
| Navigate the Videos Folder .....          | 178 |
| Watch a Video .....                       | 180 |
| Trim a Video.....                         | 182 |
| Buy or Rent a Movie or TV Show .....      | 184 |
| Navigate the Music Folder .....           | 186 |
| Play Music .....                          | 188 |
| Create a Playlist.....                    | 190 |
| Switch Between Audio Devices .....        | 192 |

## CHAPTER 1

# Getting Started with Windows

To do something useful with your computer and with Windows, you need to explore the screen, connect to your network, and learn how to work with apps.

|  |    |

# Explore the PC Screen

**B**efore getting to the specifics of working with Windows, take a few seconds to familiarize yourself with the basic elements of the screen. These include the desktop, the Start button, and the taskbar. In most cases, the Start button and the taskbar are always visible. If they do not appear, move the mouse pointer to the bottom of the screen.

## A Desktop Icon

An icon on the desktop represents a program or Windows feature. A program you install often adds its own icon on the desktop.

## B Mouse Pointer

When you move your mouse, this pointer () moves along with it.

## C Desktop

This is the Windows “work area,” meaning that it is where you work with your programs and documents.

## D Start Button

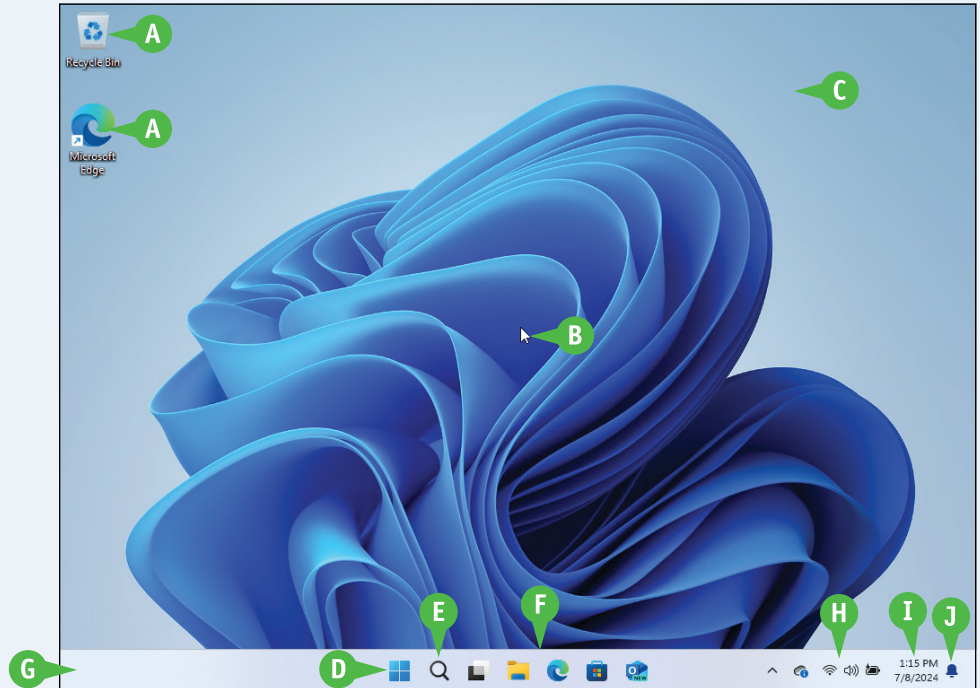

Click **Start** () to start programs and launch many of Windows’ features.

## E Search Icon

Click **Search** () to search for items on your PC or on the Internet.

## F Taskbar Icons

You use these icons to launch some Windows features with just a mouse click.

## G Taskbar

The programs you have open appear in the taskbar. You use this area to switch between programs if you have more than one running at a time.

## H Notification Area

This area displays small icons that notify you about things that are happening on your computer. For example, notifications appear if your printer runs out of paper or if an update to Windows is available over the Internet.

## I Time and Date

This is the current time and date on your computer. To display the full date, position the mouse pointer () over the time. To change the date or time, right-click the time.

## J Notifications

This icon tells you whether you have notifications that you have yet to view. Notifications give you information about what your computer and its apps are doing.

# Explore the Start Menu

To get the most out of Windows, you need to know the layout of the Start menu. As its name implies, the Start menu is your main Windows starting point. Most of the tasks you perform with Windows — such as running apps, searching your PC, working with your Microsoft account, and restarting or shutting down your PC — are launched via the Start menu.

This section gives you an overview of the Start menu. The tasks you can run via the Start menu are covered in the rest of this chapter and throughout this book.

## A Start Menu

Click **Start** (🪟) or press **Windows key** to open the Start menu on the Windows desktop.

## B User Account

This icon represents your Windows user account. Clicking this icon displays a menu of user account–related tasks.

## C Power Icon

Click **Power** (🔌) to restart, shut down, or sleep your computer.

## D Recommended

This area displays recently added apps as well as documents you have worked with recently. Click an item to launch the app or open the document. You can also click **More** to display a longer list of recent apps and documents.

## E Pinned

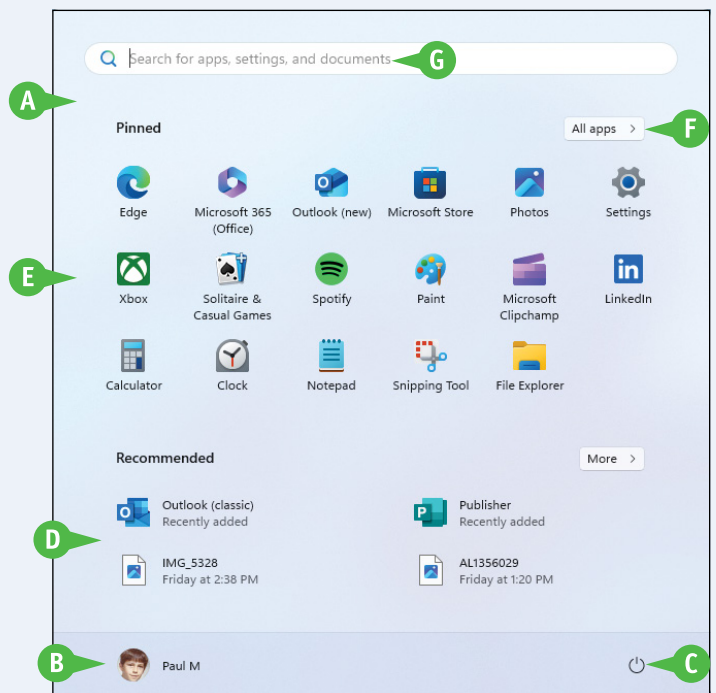

This area displays apps that have been given a fixed position on the Start menu. Click an app's icon to launch the app. You will learn how to pin apps to the Start menu in Chapter 2.

## F All Apps

Click **All apps** to display the full list of apps on your computer.

## G Search Box

You use this text box to search for items on your PC or on the Internet.

# Start and Close an App

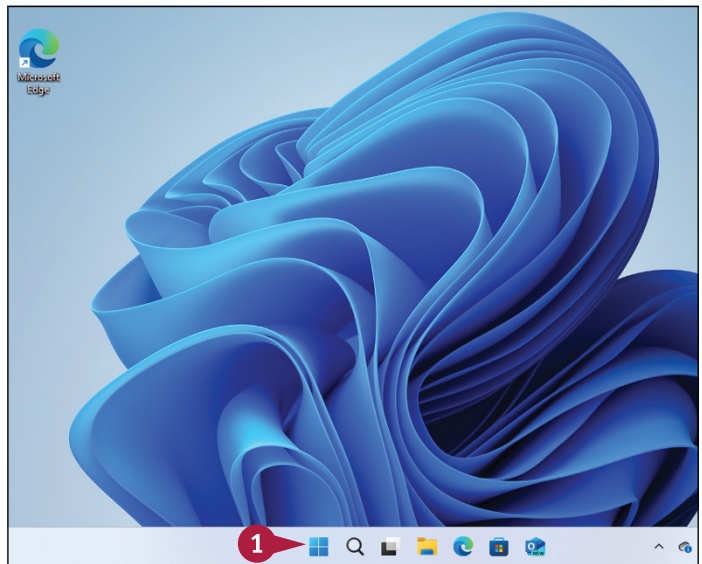

To perform tasks of any kind in Windows, you can use one of the apps installed on your computer. The application you use depends on the task you want to perform. For example, to surf the World Wide Web, you use a web browser application, such as the Microsoft Edge app that comes with Windows. To use an app, you select the one you want to run from the Start menu.

When you are done with an app, you should close it to reduce resources and keep the desktop uncluttered.

## Start and Close an App

### Start an App

1 Click **Start** (🪟).

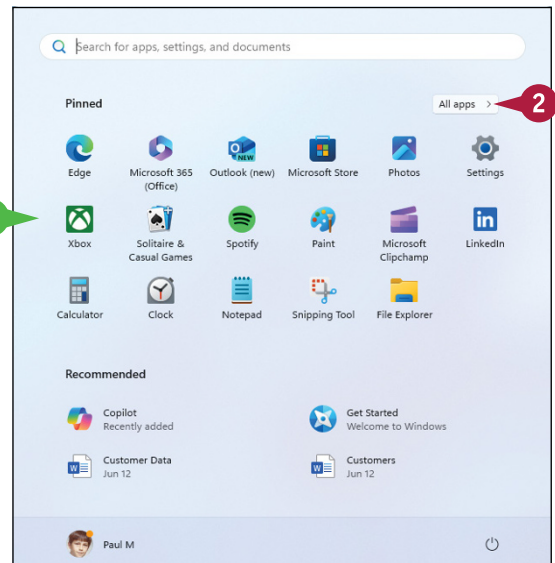

The Start menu appears.

A If the app you want appears on the main Start menu, you can click the app icon and then skip the rest of these steps.

2 Click **All apps**.

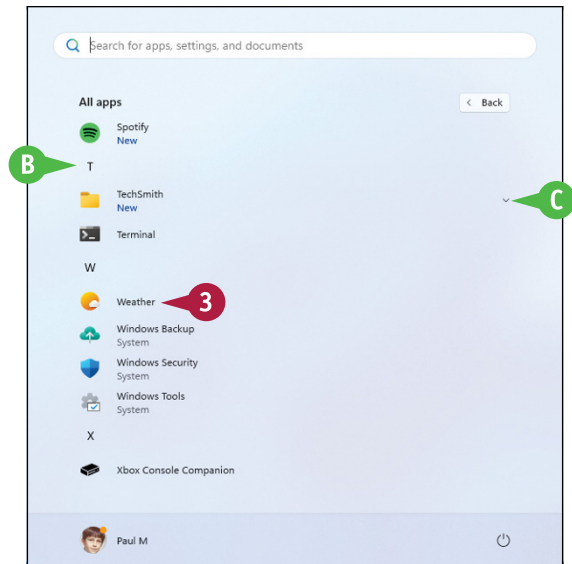

A

## Getting Started with Windows

The All Apps list appears.

- 3 Click the app you want.
- B To quickly navigate apps alphabetically, you can click any letter and then click the letter that contains the app you want.
- C If the app is in a submenu, you can click the submenu and then click the app icon.

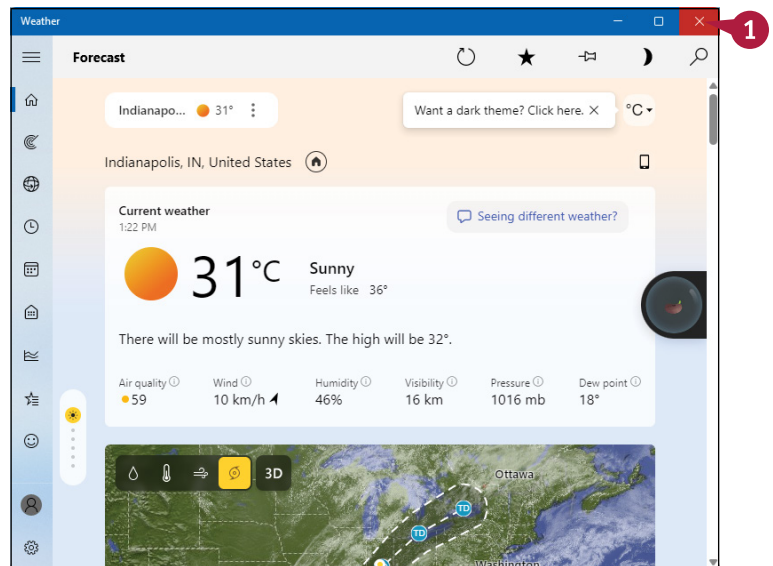

The app runs.

### Close an App

- 1 Click **Close** (X) or press **Alt + F4**.

**Note:** If the app asks if you want to save changes, click **Yes** to ensure you do not lose any work.

Windows closes the app.

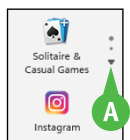

## TIPS

### Is there an easier way to locate an app?

Yes, you can perform a search to locate it. Click **Search** (Q) on the taskbar and then begin typing the name of the app. As you type, Windows displays a list of apps and other items that match the characters. When the app you want appears, click it to run the program.

### How do I navigate the pinned apps?

Some Start menus have two or more pages of pinned apps. To navigate the pages, click **Next Page** (▼) (A) and **Previous Page** (▲) (not shown), which appear to the right of the pinned apps. Refer to Chapter 2 to learn how to add your own pinned apps to the Start menu.

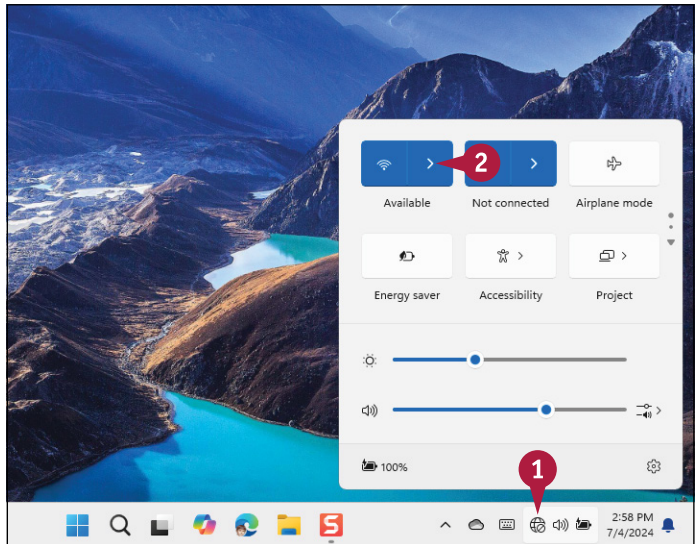

# Connect to Your Wireless Network

If you have a wireless access point and your computer supports wireless networking, you can connect to the device to access your network. If the access point is also a router that is connected to the Internet, then connecting to the wireless network gives your computer Internet access, as well.

Most wireless networks are protected with a security key, which is a kind of password. To connect, you need to provide Windows with the key. However, after you connect to the network once, Windows remembers the key and connects again automatically whenever your computer is within range of the network.

## Connect to Your Wireless Network

- 1 Click **Network** (🌐).
- 2 Click **Manage Wi-Fi Connections** (📶).

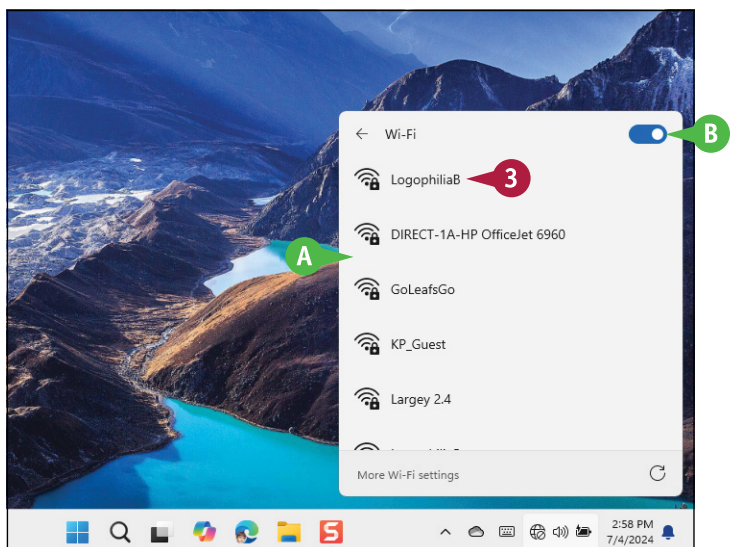

A Windows displays a list of wireless networks in your area.

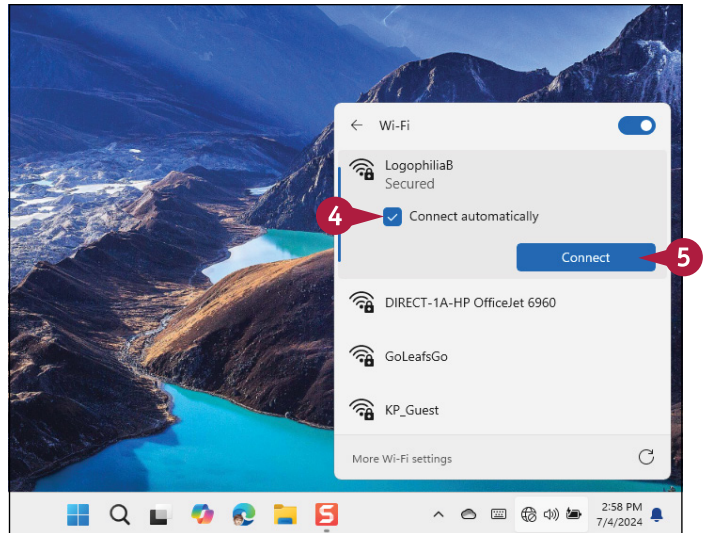

- 3 Click your network.

B If the list of wireless networks does not appear, you can click the **Wi-Fi** switch to **On** (🔌 changes to 📶) to turn on your computer's wireless capability.

**Note:** For home use, the terms *wireless* and *Wi-Fi* are synonymous.

- 4 To have Windows connect to your network automatically in the future, click **Connect automatically** (☐ changes to ☒).
- 5 Click **Connect**.

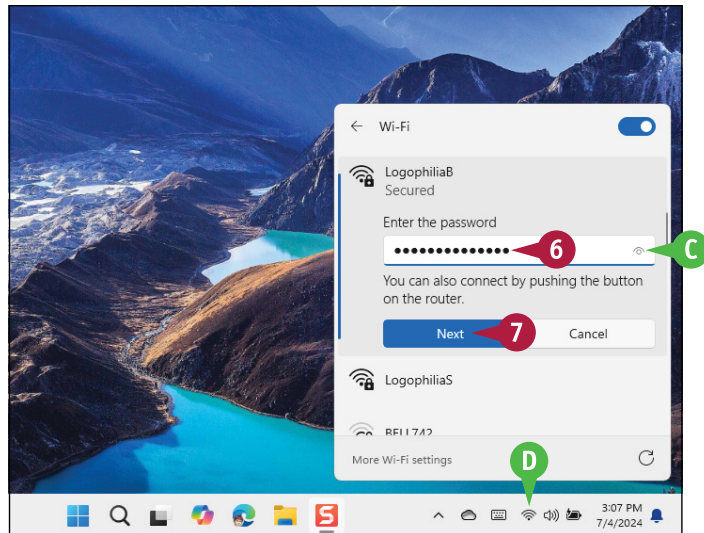

If the network is protected by a security key, Windows prompts you to enter it.

- 6 Type the security key.
- C If you want to be certain that you typed the security key correctly, you can temporarily click and hold **Display Password Characters** (👁).

- 7 Click **Next**.

Windows connects to the network.

- D The network icon changes from Disconnected (🌐) to Connected (📶) to indicate that you now have a wireless network connection.

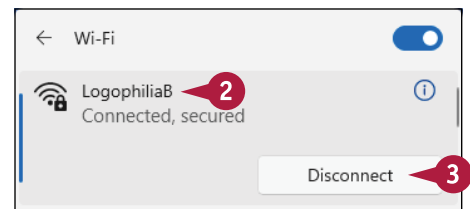

## TIP

### How do I disconnect from my wireless network?

To disconnect from the network, follow these steps:

- 1 Click **Network** (📶).
- 2 Click your network.
- 3 Click **Disconnect**. Windows disconnects from the wireless network.

# Put Windows to Sleep

You can make your computer more energy efficient by putting Windows into sleep mode when you are not using the computer. *Sleep mode* means that your computer is in a temporary low-power mode. This saves electricity when your computer is plugged in, and it saves battery power when your computer is unplugged.

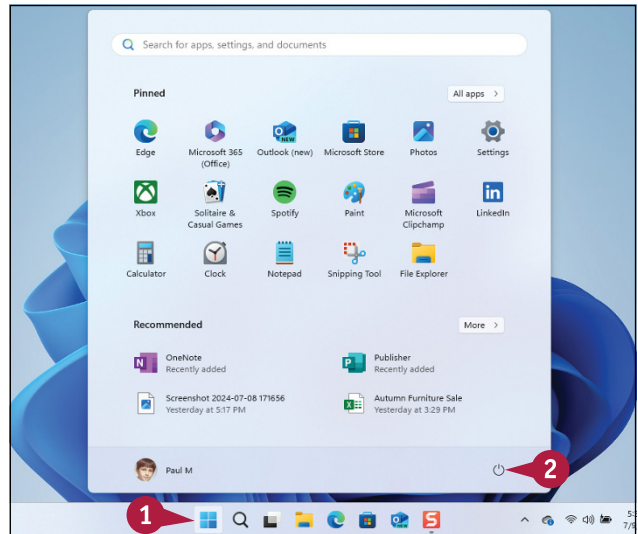

In sleep mode, Windows keeps your apps open. This is handy because it means that when you return from sleep mode, after you sign in to Windows again, you can immediately get back to what you were doing.

## Put Windows to Sleep

- 1 Click **Start** (🪟).

The Start menu appears.

- 2 Click **Power** (🔌).

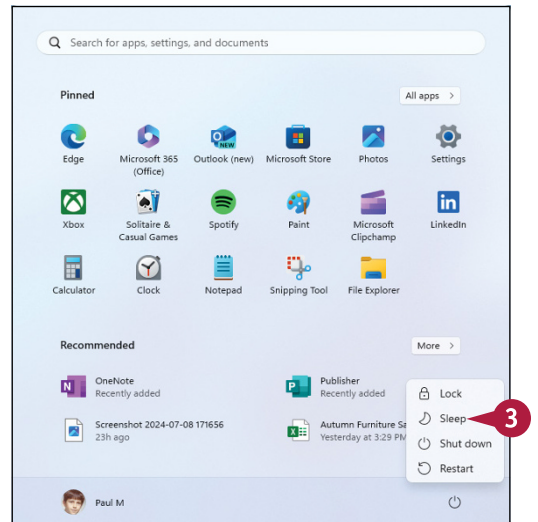

The Power options appear.

- 3 Click **Sleep**.

Windows activates sleep mode.

**Note:** To return from sleep mode, press your computer's power button.

**Note:** To learn about the Lock command, refer to Chapter 13.

# Restart or Shut Down Windows

**Y**ou can restart Windows, which means that it shuts down and starts up again immediately. This is useful if your computer is running slowly or acting odd. Sometimes a restart solves the problem.

Alternatively, when you complete your work, you could shut down Windows. However, do not just shut off your computer's power because doing so can cause problems: If you have documents with unsaved changes, you may lose those changes; you also could damage one or more Windows system files, which could make your system unstable. Therefore, you should always follow the proper steps when shutting down your PC.

## Restart or Shut Down Windows

- 1 Shut down all your running programs.

**Note:** Be sure to save your work as you close your programs.

- 2 Click **Start** ( ).

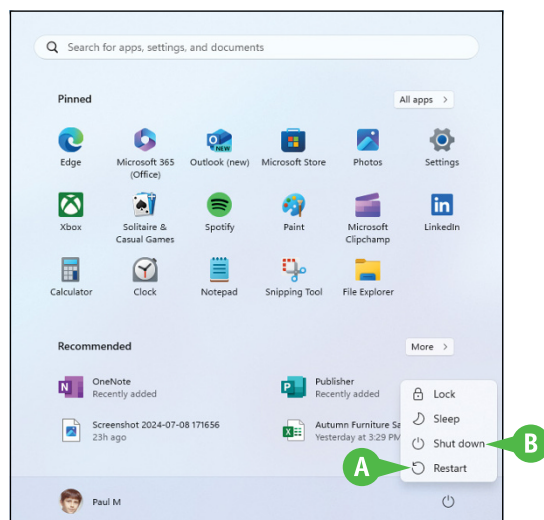

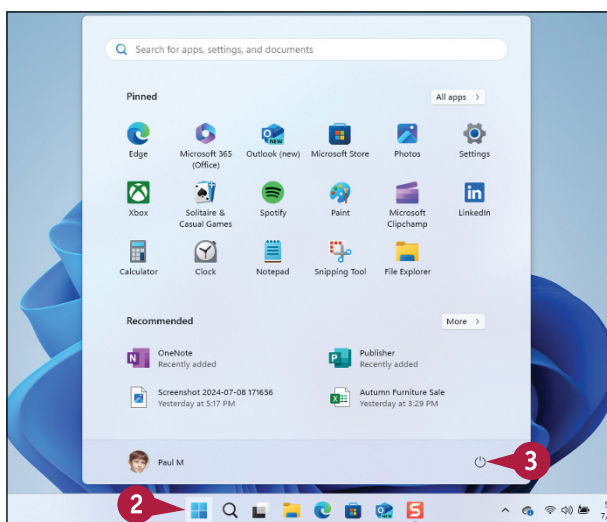

The Start menu appears.

- 3 Click **Power** ( ).

The Power options appear.

- 4 Click one of these commands:

- A You can click **Restart** to shut down and then start your computer.
- B You can click **Shut down** to turn off your computer.

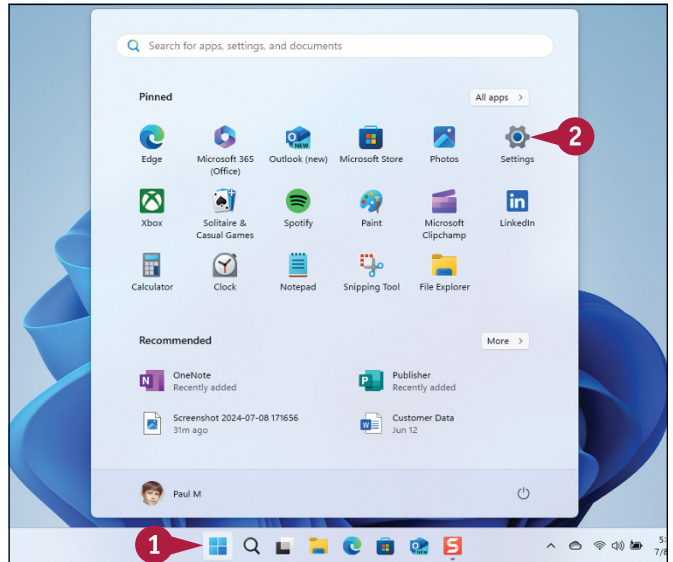

# Switch to a Microsoft Account

You can get much more out of Windows by using a Microsoft account. When you connect a Microsoft account to your Windows user account, many previously inaccessible Windows features become immediately available. For example, you can use the Outlook app to access your email and the OneDrive app to store documents online. You can also download apps from the Microsoft Store, access your photos and documents anywhere online, and even sync your settings with other PCs for which you use the same account.

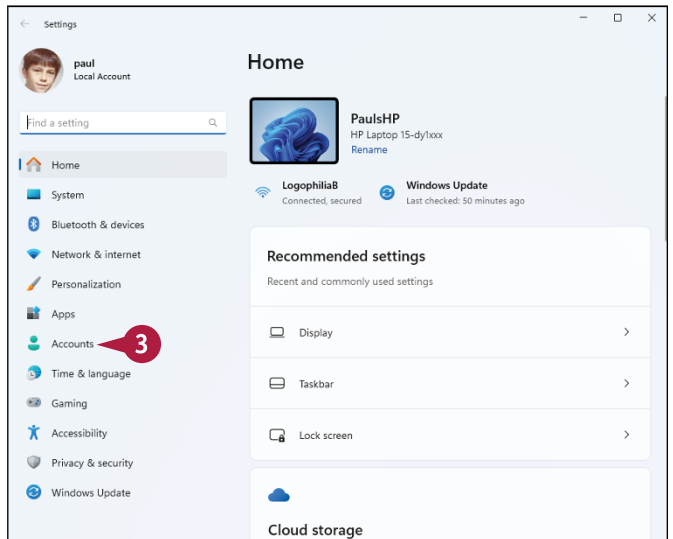

## Switch to a Microsoft Account

- 1 Click **Start** ( ).
- 2 Click **Settings**.

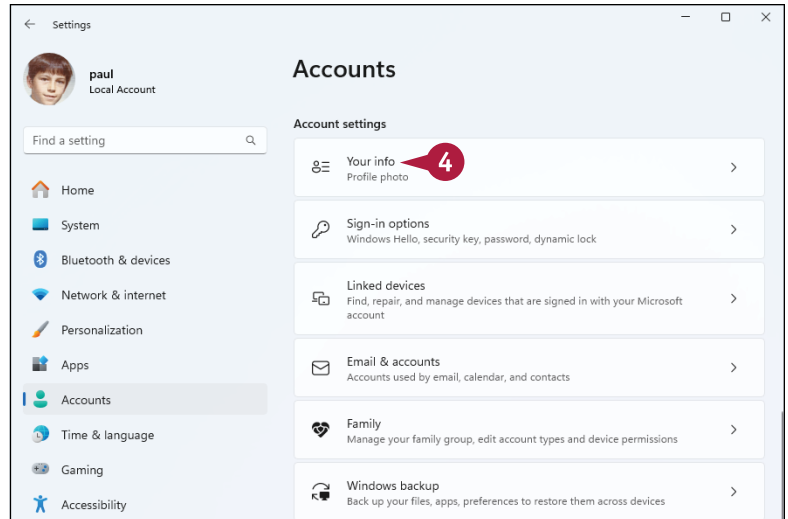

Windows opens the Settings app.

- 3 Click **Accounts**.

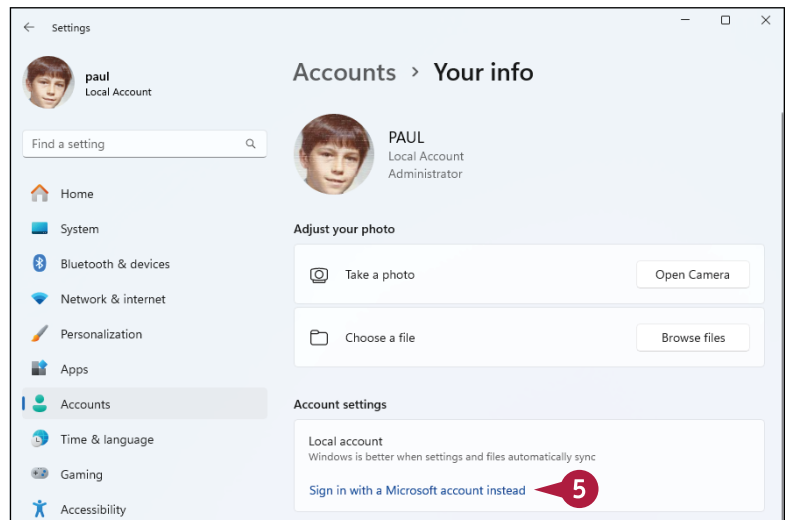

The Accounts window appears.

4 Click **Your info**.

The Your Info window appears.

5 Click **Sign in with a Microsoft account instead**.

## TIPS

### Can I create a Microsoft account if I do not already have one?

Yes. When you get to the Sign In screen (shown later in this section), click **Create one** to open the Create Account window, type your email address, click **Next**, type a password, click **Next**, follow the prompts to complete the account, and then continue with step 10 later in this section.

### Can I use a new email address for my new Microsoft account?

Yes, you can. In the Create Account window, click **Get a new email address** and then type the username you want to use with outlook.com. Your new address will be *username@outlook.com*.

continued ►

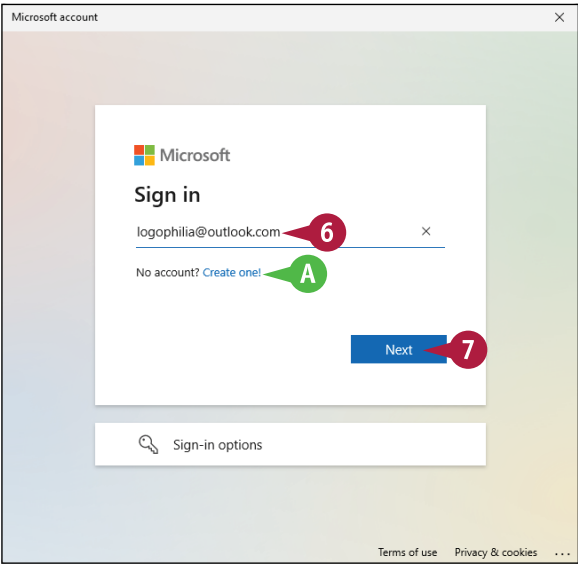

# Switch to a Microsoft Account (continued)

You do not need to use a Microsoft account to use Windows. Instead, you can use a *local account*, which allows you to log in to your PC, personalize settings, and use most Windows features. With a local account, you cannot install programs from the Microsoft Store if you are using Windows 11 Home. If you are using Windows 11 Pro, you can install only free programs from the Microsoft Store. To install any program from the Microsoft Store, and to synchronize your settings across other Windows devices, you need to switch to a Microsoft account.

## Switch to a Microsoft Account (continued)

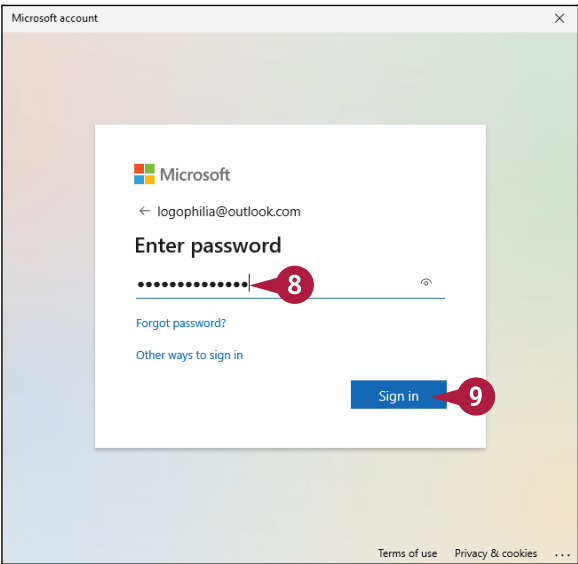

The Sign In window appears.

- A To create a new Microsoft account, you can click **Create one** and then follow the instructions in the first tip earlier in this section.
- 6 Type your email address.
- 7 Click **Next**.

The Enter Password window appears.

- 8 Type your password.
- 9 Click **Sign in**.

Windows asks you to verify your current account password.

10 Type your password.

11 Click **Next**.

The One More Step window appears.

12 Click **Next** (not shown).

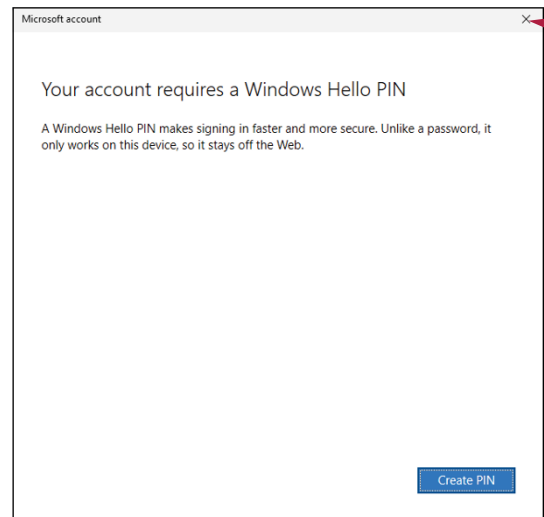

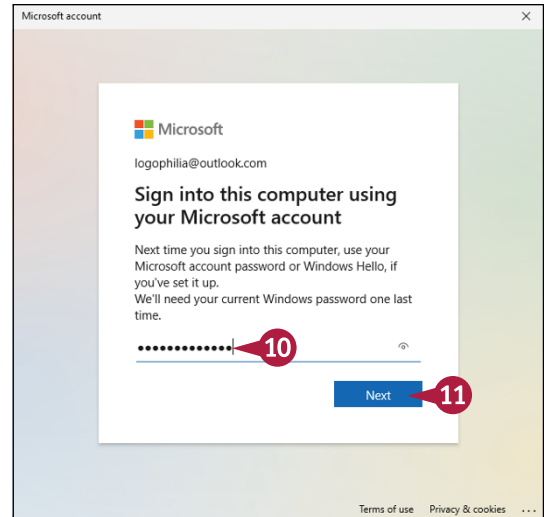

Windows asks if you want to use a PIN with your account.

13 Click **Close** (X).

**Note:** Refer to Chapter 13 to learn how to add a PIN to your account.

Windows connects the Microsoft account to your user account.

The next time you start Windows, you can use your Microsoft account email address and password to sign in.

## TIP

**If I no longer want to use a Microsoft account with Windows, can I remove it?**

Yes, but your personal data will no longer appear on the Start screen, you will not be able to access your files online, and your settings will no longer sync between PCs. To remove the Microsoft account, click

**Start** (Windows logo), click your username in the lower-left corner, and then click **Change account settings**. In the Accounts window, click **Your info** and then click **Sign in with a local account instead**.

Microsoft account

Windows is better when settings and files automatically sync

[Sign in with a local account instead](#)

# Install an App

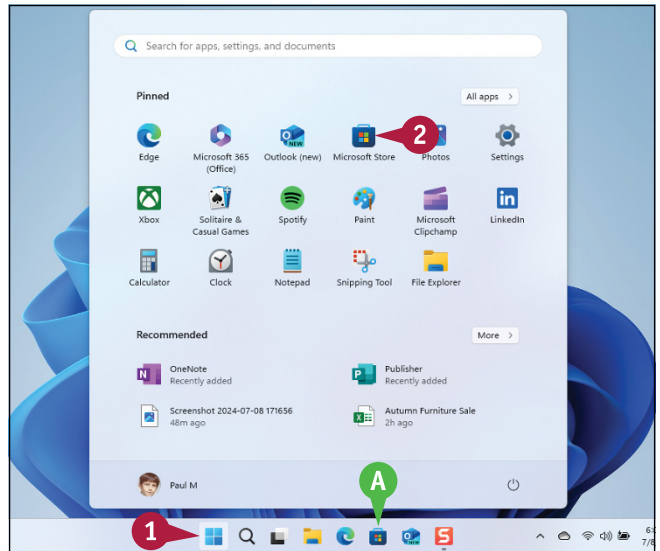

If Windows does not have an app that you need, you can obtain the app and then install it on your computer. You usually obtain apps from the Microsoft Store, which is an app that is preinstalled with Windows. Many Microsoft Store apps are free, but some require a payment using the credit card you have on file with your Microsoft account.

You can also install apps that are not available via the Microsoft Store. In this case, you obtain (and usually pay for) the app on the web and then download the app to your computer. However, it is important to only install apps that you obtained from a reputable and secure site.

## Install an App

- 1 Click **Start** ( ).
- 2 Click **Microsoft Store**.
- A You can also click **Microsoft Store** ( ).

**Note:** You need a Microsoft account to install from the Microsoft Store, as described in the previous section, “Switch to a Microsoft Account.”

The Microsoft Store app appears.

- 3 Click **Apps**.
- Microsoft Store displays the Apps screen, which enables you to browse apps by category.
- B Alternatively, if you know the name of the app you want to install, you can use the Search box to locate the app.
