Oral and Maxillofacial Surgery

Second Edition

Edited by

Lars Andersson

DDS, PhD, Dr Odont
Senior Professor Oral & Maxillofacial Surgery
Faculty of Odontology
Malmö University
Malmö, Sweden

Deepak G. Krishnan

DDS, FACS
Chief of Oral & Maxillofacial Surgery
University of Cincinnati Medical Center
Department of Surgery
Oral and Maxillofacial Surgery
University of Cincinnati
Cincinnati, OH, USA

Zachary S. Peacock

DMD, MD, FACS
Chief of Oral and Maxillofacial Surgery
Massachusetts General Hospital
Walter C. Guralnick Chair of Oral and Maxillofacial Surgery
Harvard School of Dental Medicine
Boston, MA, USA

Preface to the First Edition	lii

Part 1 Basic Principles in Oral Maxillofacial Surgery 1

Section Editor: Deepak G. Krishnan

1.1 Medical Management and Preoperative Patient Assessment	3
<i>Gary F. Bouloux</i>	
Cardiovascular disease	5
Coronary artery disease	5
Congestive heart failure	5
Valvular heart disease	6
Prosthetic valve replacement and infective endocarditis	6
Anticoagulation	6
Arrhythmia	7
Hypertension	8
Automatic implantable cardioverter defibrillators and pacemakers	8
Respiratory disease	9
Asthma	9
Chronic obstructive pulmonary disease	10
Pneumonia	10
Pulmonary embolus	10
Atelectasis	11
Pulmonary edema	11
Airway	11
Renal disease	11
Liver disease	12
Blood disorders	13
Anemias	13
Lymphoma and multiple myeloma	13
Thrombocytopenia	13
Coagulopathy	13
Hemophilia A and B	14
States of coagulopathy	14
Endocrine	14
Diabetes mellitus	14
Thyroid disease	15
Adrenal function	16
Pituitary disease	16
Neurological disease	17
Trauma	17
Seizures	17
Myasthenia gravis	17

Substance abuse	17
Obesity	18
Geriatric patients	19
Pediatric patients	19
Pregnancy	19
References	20
1.2 Medical Emergency Care	21
<i>Zachary S. Peacock and M. Anthony Pogrel</i>	
Introduction	21
Syncope	22
Management	22
Chest pain	23
Pathogenesis	23
Diagnosis and history	23
Management	24
Cardiac arrest	24
The automated external defibrillator	25
General approach to the collapsed patient	25
Considerations in transfer of the patient	27
Asthma	27
Pathophysiology	27
Prevention	27
Clinical presentation	27
Management	27
Hypoglycemia	28
Normal physiological response to hypoglycemia	28
Signs and symptoms of hypoglycemia	29
Management	29
Anaphylaxis	29
Presentation	30
Differential diagnosis	30
Management	31
Seizures	31
Management	31
Status epilepticus	32
References	32
1.3 Local Anesthesia	34
<i>James A. Phero and Benjamin L. Hechler</i>	
Introduction	34
Mode of action of local anesthetics	34
Techniques of local anesthesia for oral and maxillofacial surgery	35
Topical anesthesia	35
Infiltration anesthesia	35
Regional block anesthesia	36
Mandibular anesthesia	36
Inferior alveolar nerve block (Halstead technique)	36
Gow-Gates technique	36
Akinosi-Vazirani technique	37
Mental and incisive nerve block	37
Long buccal nerve block	37
Extraoral approach to the mandibular nerve	38
Maxillary anesthesia	38
Maxillary nerve block	38
Tuberosity approach	38
Greater palatine foramen approach	38
Extraoral approach	38

Supplementary intraoral techniques of local anesthesia	39
Failure of anesthesia	39
Intraosseous anesthesia	40
Intraligamentary (periodontal ligament) anesthesia	40
Intrapulpal anesthesia	40
Mylohyoid nerve block	41
Cervical nerve block	41
Local anesthetic drugs	41
Epinephrine	41
Lidocaine	42
Mepivacaine	42
Prilocaine	42
Articaine	42
Articaine for mandibular infiltration	42
Etidocaine	42
Bupivacaine	42
Levobupivacaine	43
Ropivacaine	43
Intranasal tetracaine	43
Liposomal bupivacaine	43
Buffered local anesthesia	43
Complications of local anesthesia in the orofacial region	44
Localized complications	44
Nerve damage	44
Motor nerve paralysis	44
Trismus	44
Positive aspiration in local anesthesia	44
Intravascular injection	44
Systemic complications	45
Allergy	45
Infection	45
Toxicity	45
Calculating maximum dose when using multiple local anesthetics	45
Drug interactions	45
Acknowledgement	46
References	46
 1.4 Sedation and General Anesthesia in Oral and Maxillofacial Surgery (OMS): An International Perspective	 48
<i>Late Richard C. Robert, Jr. and Tara Renton</i>	
Introduction and history	48
Status of sedation in the UK	49
Status of sedation and anesthesia in the United States	50
Levels of sedation	50
Pharmacology	50
Nitrous oxide	50
The benzodiazepines	50
Diazepam and midazolam	50
Opioids	51
Fentanyl	52
Remifentanyl	52
Propofol	52
Ketamine and dissociative anesthesia	53
Reversal agents	54
Approaches to sedation and anesthesia for office surgery	54
The UK experience	54
The US experience	55
Moderate sedation	55

	Deep sedation/general anesthesia	55
	Monitoring	56
	Managing safety concerns in office anesthesia	56
	The UK	56
	The United States	56
	Conclusion	57
	References	57
1.5	Basic Surgical Principles	59
	<i>M. Anthony Pogrel and William Myung Kwon</i>	
	Introduction	59
	Aseptic technique	59
	Principles of surgical incisions	60
	Types of intraoral incisions	61
	Principles of soft tissue biopsy	63
	Biopsy of the mucosal surface of the lip	63
	Principles of suturing	64
	Holding the needle driver	64
	Setting up the needle	65
	Economy of motion	65
	Types of sutures	65
	Types of needles	66
	Suturing techniques	67
	References	69
1.6	Armamentarium for Core Oral and Maxillofacial Surgery	70
	<i>Salman Tahir, Yotom Rabinowitz, and Logan Herm</i>	
	Hard tissue surgery	70
	Dentoalveolar surgery	70
	Periosteal elevators	70
	Dental elevators	71
	Dental extraction forceps	71
	Basic retractors	73
	Orthognathic surgery	75
	Osteotomy retractors	75
	Osteotomes, chisels, and mobilizers	76
	Drill bits, saw blades, and burs	78
	Trauma surgery	79
	Nasal fractures	79
	Maxillary and zygomatic fractures	80
	Mandibular fractures	80
	Orbital fractures	82
	Pathologic surgery	83
	Curettes	83
	Tissue forceps	84
	Scissors	85
	Temporomandibular joint surgery	86
	Soft tissue surgery	86
	Basic surgical tools and sequencing	86
	Diathermy Devices/Electrocautery	88
	Suture	89
	Hemostatic agents	89
	Pathology	91
	References	92

1.7	Radiographic Imaging in Oral and Maxillofacial Surgery	93
	<i>William Charles Scarfe, Arne Petersson, and Gustavo Machado Santaella</i>	
	Maxillofacial imaging strategies	93
	Imaging modalities	93
	Intraoral radiography	93
	Extraoral imaging	93
	Roles of imaging in oral and maxillofacial surgery	99
	Diagnosis	99
	Jaw pathology	99
	Temporomandibular joint	102
	Implant site assessment	104
	Traumatic injuries	106
	Craniofacial anomalies	106
	Important input to surgical treatment of pathosis	107
	Virtual surgical simulation and 3D modeling facilitates treatment	107
	Postoperative and periodic monitoring	108
	Summary	109
	References	109

Part 2 Dentoalveolar Surgery

113

Section Editor: Lars Andersson

2.1	Exodontia	115
	<i>Anna Truedsson</i>	
	Introduction	115
	Indication for extraction	116
	Dental caries	116
	Periodontal disease	116
	Pulp disease	116
	Pathologic lesions surrounding teeth	117
	Infection	117
	Cysts	117
	Tumors	117
	Before radiation therapy	117
	Crown and root fractures	117
	Teeth in bone fracture lines	117
	Malposition of teeth	118
	Impacted teeth	118
	Supernumerary teeth	118
	Orthodontic indications	118
	Before prosthetic therapy	118
	Before orthognathic surgery	119
	Other reasons for extraction	119
	Medical evaluation	119
	Clinical evaluation of teeth before extraction	121
	Preoperative assessment of anatomical conditions based on preoperative radiographic investigation	121
	Control of anxiety and pain	122
	Sedation	122
	Local anesthesia	122
	Dental extraction forceps and elevators	122
	Dental extraction forceps	122

Preparation for extraction	125
Surgeon's position for extraction with forceps	125
Luxation/extraction of the tooth with dental forceps	125
Dental elevators	128
Principles of luxation with dental elevators	128
Principles of simple (closed) extraction	129
Surgical (open) extraction of teeth or roots	131
Technique for open surgical extraction	132
Information and advice after surgical extraction	133
Advice for patients after a tooth extraction	133
Common side effects after a surgical procedure in the oral cavity	133
References	134
 2.2 Third Molar Management	 135
<i>Tara Renton, Frédéric Van der Cruyssen, and Leif Lysell</i>	
Introduction	136
Definitions and terminology	137
Prevalence of mandibular third molars	137
Public health aspects	138
Pathology related to third molars	138
Follow-up of defined populations	139
Data from surgically treated third molar patients	139
Other studies on dental patients	140
Systematic reviews and guidelines	141
Clinical decision-making	143
Judgment analysis	143
Decision analysis	145
Patient preferences	147
Indications for third molar intervention	150
Contraindications for third molar removal	151
Prophylactic third molar removal	151
Therapeutic indications	152
Interventional extractions or clinical review?	152
Clinical review versus active surveillance	153
Interventional extractions	153
Presurgical assessment of patients presenting with third molars	155
Clinical assessment	155
Radiological assessment	156
Application depth	157
Angulation	157
Crown size and condition	157
Root number and morphology	160
Root surface area	160
Follicular width	160
Pathology associated with third molars	161
Periodontal status	161
The restorative condition of the adjacent second molar	162
Proximity to the inferior alveolar canal	162
Cone-beam CT scanning	162
Atrophic mandible or very long roots of third molar	164
Proximity of other structures	164
Risk assessment	165
Grade of difficulty	166
Presurgical management	167
Referral	167
Consent	167
Patient information	168
The medically compromised patient	168

Preoperative considerations	168
Sedation	168
Local anesthesia	170
Antibiotics	170
Analgesia	171
Steroids	171
Chlorhexidine	171
Surgical procedure	171
Principles of exodontia of third molars without using a flap	171
Surgical extraction of third molars	172
Flap design	172
Mandible envelope flap	173
Mandibular buccal triangular flap	173
Mandibular bone removal	173
Sectioning the tooth	174
Planning tooth section	174
Lingual flap elevation and lingual retraction	174
Alternative procedures	175
Coronectomy	175
Indications for coronectomy	184
Possible complications of coronectomy	186
Coronectomy procedural tips	186
Technique	186
Avoid root mobilization	186
Lingual nerve injury	186
Ensure primary closure	186
Adjunctive procedures	186
Related cysts and high-risk ankylosed teeth	187
Postoperative radiography	187
Eruption of third molars	187
Orthodontic traction	187
Autotransplant	187
Germectomy or lateral trepanation	187
Restoration of adjacent tooth	187
Obliteration of third molar tooth bud	188
Periodontal therapy	188
Other techniques	188
Outcomes of TMS	188
Successful outcome	188
Complications associated with treatment	190
Dry socket	190
Retention of root fragment	190
Displacement of tooth or root fragment	190
Infection	191
Surgical damage to adjacent structure	191
Periodontal healing after TMS	191
Fractured mandible or tuberosity	191
Oral antral fistula	191
Retained foreign body	191
Nerve damage	192
Inferior alveolar nerve	192
Lingual nerve	192
Long buccal nerve	192
Mylohyoid nerve	192
Other potentially chronic complications	192
Temporomandibular joint dysfunction	192
Psychological complications	192
Acknowledgments	192
References	192

2.3	Surgical Treatment of Impacted Teeth Other Than Third Molars	199
	<i>Mehran Hossaini</i>	
	Introduction	199
	Definitions	199
	Incidence	199
	Theories why teeth become impacted	200
	Evaluation	200
	Radiographic evaluation	202
	Treatment planning	202
	Orthodontic considerations and prognostic markers	204
	Surgical considerations and prognostic markers	204
	Surgical management	204
	Surgical removal	204
	Exposure and bonding for guided eruption	205
	Postoperative management and complications	207
	References	207
2.4	Nerve Involvement in Oral and Maxillofacial Surgery	209
	<i>M. Anthony Pogrel</i>	
	Trigeminal nerve	209
	Inferior alveolar nerve block	209
	Inferior alveolar nerve damage from root canal treatment	209
	Nerve damage from dental implants	210
	Periodontal surgery	212
	Nerve damage from bone grafts	213
	Nerve damage from dentoalveolar surgery	213
	Lingual nerve	214
	Long buccal nerve	215
	Mylohyoid nerve	217
	Evaluation of trigeminal nerve damage	217
	Facial nerve	218
	Microneurosurgery	220
	References	222
2.5	Autotransplantation of Teeth	224
	<i>Lars Andersson, Mitsuhiro Tsukiboshi, Pawel Plakwicz, and Ewa Czochrowska</i>	
	Introduction	224
	Indications	225
	Congenitally missing teeth (aplasia)	225
	Unrestorable teeth	228
	Crown root, and root fractures	228
	Replacing lost teeth in young patients	229
	Replacing lost teeth in adults	231
	Selection of donor teeth	231
	Autotransplant versus implant	234
	Principles of healing after autotransplantation	234
	Pulp	235
	Immature roots (open apex)	235
	Mature roots with closed apices	236
	Periodontal ligament	236
	Principles of surgery	237
	Surgical techniques	237
	Postoperative care	239
	Long-term prognosis	240
	Summary	240
	References	240

Part 3 Implant Surgery**245***Section Editor: Lars Andersson and Deepak G. Krishnan*

3.1 Principles of Implantology	247
<i>Lars Rasmusson and Lars Sennerby</i>	
Biological principles behind osseointegration	247
Implant stability and loading considerations	247
Primary stability	249
Secondary stability	249
Maintenance of stability	251
Bone tissue responses to implants	252
The marginal tissues	255
Indications for implant treatment	256
Contraindications	256
Medical contraindications	256
Systemic risk factors	256
Local contraindications	257
Treatment of children and adolescents with oral implants	257
Treatment planning	257
Clinical examination	257
General medical evaluation	257
Oral health status	257
Jaw relations	258
Radiographic examination	258
Computed tomography and cone-beam computed tomography	258
Radiographic classification of bone quality	258
Model analyses	258
Surgical procedure	259
Maintenance	260
Computer-guided implant treatment	260
References	262
 3.2 The Use of Guided Bone Regeneration for Optimal Implant Placement in the Aesthetic Zone: Biological Background and Surgical Principles	 265
<i>Christer Dahlin and David González</i>	
Biological factors influencing the reconstruction of alveolar bone	265
The biological width	266
The biological principles of guided bone regeneration	267
The biological principle of GBR revisited	268
Membrane design criteria and material selection	268
Indications for GBR treatment	268
Basic surgical principles of GBR	268
Preoperative antibiotics	268
Flap design	269
Site preparation	269
Graft material	269
Membrane selection and positioning	269
Biodegradable membranes	269
Non-resorbable membranes	270
Suturing	270
Follow-Up	270
Temporary dentures	270
Membrane removal	271
Clinical results of GBR	271
References	272

3.3	Principles of Site Preservation and Ridge Augmentation	274
	<i>Karl-Erik Kahnberg</i>	
	Background	274
	Aspects of bone graft behavior	275
	Block or particulated bone	275
	Onlay grafting	276
	Inlay grafting	277
	Bone graft reconstruction of the jaws before implant placement	278
	Implant rehabilitation in the posterior maxilla using autogenous bone material	280
	Background	281
	Morphologic aspects	281
	Surgical technique	282
	Literature review	286
	Complications associated with sinus lift procedures	287
	Use of platelet-rich plasma	287
	Staging of grafting procedures	288
	Split crest surgery	288
	Complications	288
	References	288
3.4	Biomaterials for Bone Replacement in Implant Surgery	293
	<i>Carlo Maiorana and Mario Beretta</i>	
	Introduction	293
	Biomaterials	294
	Biomaterials currently used in osseointegration	294
	Anorganic bovine bone	294
	Calcium phosphate	294
	Calcium sulfate	295
	Calcium carbonate	295
	Bioactive glass	295
	Demineralized freeze-dried bone allograft	295
	Fresh-frozen homologous bone	295
	Surgical techniques	296
	Post-extraction sites	296
	Immediate technique	296
	Delayed technique	296
	Horizontal defects	296
	Dehiscence and fenestration	296
	Sausage technique	296
	Autogenous intraoral or extraoral blocks	297
	Vertical defects	298
	Vertical GBR with membrane	299
	Customized titanium meshes	300
	Sinus elevation	303
	Biomaterials in major advanced osseointegration	305
	Fresh-frozen bone in major advanced osseointegration	305
	Developments: growth factors and BMP	309
	References	309
3.5	Autogenous Bone Grafting	313
	<i>George K.B. Sandor, Leena P. Ylikontiola, Vesa T. Kainulainen, Kyösti S. Oikarinen, Cameron M.L. Clokie, Alec Bankhead, Michael J. Grau, Jr., and David K. Lam</i>	
	Introduction	313
	The need for bone	313
	Choosing a harvest site based upon anticipated volumetric and structural needs	314
	Cortical or cancellous graft?	315
	Intraoral harvest sites	316
	Mandibular symphysis	317

Bone quality and quantity	317
Technique	317
Mandibular ramus and retromolar area	318
Bone quality and quantity	318
Technique	319
Maxillary tuberosity	319
Bone quality and quantity	319
Technique	319
Coronoid process	319
Bone quality and quantity	319
Technique	319
Mandibular and maxillary tori	320
Bone quality and quantity	320
Technique	320
Zygomatic bone	320
Bone quality and quantity	320
Technique	320
Harvest sites outside the oral cavity	320
Ilium	320
Anterior iliac crest – open	322
Anterior iliac crest – trephine	323
Posterior iliac crest	324
Costochondral grafts	324
Bone quality and quantity	324
Technique	324
Calvarium	324
Bone quality and quantity	324
Technique	324
Proximal tibia	326
Bone quality and quantity	326
Technique	327
Proximal ulna	329
Bone quality and quantity	329
Technique	331
Femur cancellous graft	331
Bone quality and quantity	331
Technique	331
Vascularized fibula	333
Bone quality and quantity	333
Technique	334
References	336
3.6 Sinus Augmentation	339
<i>Alfred S. L. Lau and Mei M. Chong</i>	
Introduction	339
Lateral window approach	340
Trans-crestal approach	341
Complex grafting	342
Complications of sinus augmentation	343
Looking into the future	349
References	349
3.7 Peri-implant Soft Tissue Procedures	352
<i>Janina Golob Deeb, Dan Tran, and George R. Deeb</i>	
Importance of keratinized tissue around implants	352
Staging of soft tissue procedures	352
Pre-implant placement site development	352
Soft tissue procedures during implant placement	353

Soft tissue procedures combined with restorative treatment	354
Recession of peri-implant soft tissue margin	357
Maintaining peri-implant soft tissues	358
Mucogingival surgery	359
Reconstructive soft tissue procedures	359
Free soft tissue grafts	359
Pedicle grafts	359
Types of donor tissue	362
Autogenous donor tissue	362
Allografts	363
Xenografts	364
Regenerative tissue procedures	364
Guided bone regeneration	364
Biologic agents	366
Resective soft tissue procedures around implants	366
Acknowledgments	368
References	368
3.8 Full Mouth Graftless Rehabilitation	372
<i>Dr. Gunaseelan Rajan and Ashwini Obla Ramesh</i>	
Introduction	372
All-on-4 concept	372
Restorative-driven treatment planning	373
Presence or absence of composite defect	373
Inter-arch space or the restorative space required for the prosthesis	374
Visibility of the transition zone	374
Available bone height	374
Maxilla	375
Mandible	375
All-on-4 surgical procedure	375
Zygoma implant surgical procedure	377
Incision and flap design	377
Complications	381
Conclusion	382
References	383
3.9 Digital Workflow and Treatment Planning in Dental Implant Surgery	384
<i>Kevin L. Rieck and David J. Rallis</i>	
Introduction	384
Transitioning to a digital workflow	384
Components of a digital workflow	385
Surgical guides	387
Navigation	388
Full-arch dental implant reconstruction	389
"Jaw-in-a-day"	390
References	393
3.10 Peri-Implantitis	395
<i>Dr. Mihir R. Kulkarni, Dr. Srinath L. Thakur, and Dr. M. V. Manjunath</i>	
Introduction	395
Definition and classification	395
Clinical features	396
Pathogenesis	397
Management	398
Prevention of peri-implantitis	399
Conclusion	399
References	399

Part 4 Infections**401***Section Editor: Lars Andersson*

4.1 Bacterial Infections of the Oral and Maxillofacial Region	403
<i>Tomoari Kuriyama, Bodil Kristina Lund, David W. Williams, Takahiko Shibahara, Tomomi Yamashita, and Michael A. O. Lewis</i>	
Introduction	404
Examination and diagnosis	404
Assessment of emergency level	404
Collection of information	404
Interview, observation, and palpation	404
Imaging studies	405
Blood examination	406
Diagnosis	408
Management planning	408
Consideration for the necessity of hospitalization	408
Determination of treatment methods	409
Evaluation of response to treatment and patient's condition	409
Surgical treatment and supportive care	409
Surgical treatment	409
Incisional drainage	409
Endodontic therapy (root canal opening)	412
Management of harmful pressure on offending tooth	412
Removal of offending tooth or the foreign bodies affecting the infection	412
Medical supportive care	412
Management of fluid and electrolyte balances	412
Pain control	413
