## THEORETICAL BACKGROUND

### THEORETICAL FRAMEWORK

The theoretical framework of this study is based on the Social Cognitive Theory (SCT) of Bandura (1982). SCT posits that behavior is determined by the interaction of personal, environmental, and behavioral factors. In the context of this study, the personal factors include the individual's beliefs, attitudes, and self-efficacy. Environmental factors include the social norms and the availability of resources. Behavioral factors include the individual's actions and the resulting outcomes.

### CONCEPTUAL FRAMEWORK

#### CONCEPTUAL MODEL

The conceptual model of this study is based on the SCT. It posits that the individual's beliefs, attitudes, and self-efficacy (personal factors) interact with the social norms and the availability of resources (environmental factors) to determine the individual's actions (behavioral factors). The resulting outcomes are then fed back into the personal factors, creating a continuous cycle.
