# Continuous Processing in Pharmaceutical Manufacturing

# CONTENTS

[Cover](#)

[Related Titles](#)

[Title Page](#)

[Copyright](#)

[List of Contributors](#)

[Preface](#)

[Chapter 1: Proteins Separation and Purification by Expanded Bed Adsorption and Simulated Moving Bed Technology](#)

[1.1 Introduction](#)

[1.2 Protein Capture by Expanded Bed Technology](#)

[1.3 Proteins Separation and Purification by Salt Gradient Ion Exchange SMB](#)

[1.4 Conclusion](#)

[References](#)

[Chapter 2: BioSMB Technology as an Enabler for a Fully Continuous Disposable Biomanufacturing Platform](#)

[2.1 Introduction](#)

[2.2 Integrated Continuous Bioprocessing](#)

[2.3 Multicolumn Chromatography](#)

[2.4 BioSMB Technology](#)

[2.5 Fully Disposable Continuous Processing](#)

[2.6 Case Studies](#)

[2.7 Regulatory Aspects](#)

[2.8 Conclusions](#)

[References](#)

## Chapter 3: Impact of Continuous Processing Techniques on Biologics Supply Chains

### 3.1 Introduction

### 3.2 Chromatography Techniques Used in Downstream Purification of Biomolecules

### 3.3 Next-Generation Biologic Products – Bispecific Monoclonal Antibodies

### 3.4 Improving the Downstream Processing of Bispecific Mabs by Introduction of MCSGP in the Value Chain

### 3.5 Conclusion

### 3.6 Further Research

### Acknowledgments

### 3.A Appendix/Additional Information

### References

## Chapter 4: Integrating Continuous and Single-Use Methods to Establish a New Downstream Processing Platform for Monoclonal Antibodies

### 4.1 Introduction

### 4.2 Harvest and Clarification

### 4.3 Capture

### 4.4 Polishing

### 4.5 Cost of Goods Analysis

### 4.6 Summary

### References

## Chapter 5: Modeling of Protein Monomer/Aggregate Purification by Hydrophobic Interaction Chromatography: Application to Column Design and Process Optimization

### 5.1 Introduction

[5.2 Mathematical Model](#)

[5.3 Experimentation](#)

[5.4 Results and Discussion](#)

[5.5 Conclusion](#)

[Acknowledgments](#)

[References](#)

## [Chapter 6: Continuous Animal Cell Perfusion Processes: The First Step Toward Integrated Continuous Biomanufacturing](#)

[6.1 Introduction](#)

[6.2 The Basics of Perfusion Processes](#)

[6.3 Cell Banking and Inoculum Development in the  
Context of Perfusion Processes](#)

[6.4 Culture Conditions](#)

[6.5 Cell Retention Devices](#)

[6.6 Integrated Perfusion–Purification Processes for  
Continuous Biomanufacturing](#)

[6.7 Concluding Remarks](#)

[References](#)

## [Chapter 7: Perfusion Process Design in a 2D Rocking Single-Use Bioreactor](#)

[7.1 Introduction](#)

[7.2 Production Costs](#)

[7.3 Equipment Requirements for a Single-Use  
Perfusion Process](#)

[7.4 Testing Results Single-Use Perfusion Process](#)

[7.5 Simplified Seeding Process](#)

[7.6 Future Outlook](#)

[References](#)

## Chapter 8: Advances in the Application of Perfusion Technologies to Drosophila S2 Insects Cell Culture

### 8.1 Introduction

### 8.2 Case Study 1: Acoustic Separation

### 8.3 Case Study 2: ATF-Based Cell Retention

### 8.4 Final Remarks

### Acknowledgments

### References

## Chapter 9: Single-Use Systems Support Continuous Bioprocessing by Perfusion Culture

### 9.1 Introduction

### 9.2 Potential Advantages in Continuous Processing

### 9.3 Challenges in Adoption of Continuous Processing

### 9.4 Continuous Biomanufacturing

### 9.5 Single-Use Systems

### 9.6 Hybrid Systems

### 9.7 Perfusion Culture

### 9.8 Single-Use in Continuous Biomanufacturing

### 9.9 Roller Bottles

### 9.10 Mechanically Agitated Suspension Reactors

### 9.11 Hollow Fiber Media Exchange

### 9.12 Packed Bed Bioreactors

### 9.13 Hollow Fiber Perfusion Bioreactors

### 9.14 Continuous Flow Centrifugation

### 9.15 Acoustic Wave Separation

### 9.16 Conclusion

### References

## Chapter 10: Multicolumn Countercurrent Gradient Chromatography for the Purification of

## Biopharmaceuticals

10.1 Introduction to Multicolumn Countercurrent Chromatography

10.2 Introduction to Multicolumn Simulated Moving Bed (SMB) Chromatography

10.3 Capture Applications

10.4 Polishing Applications

10.5 Discovery and Development Applications

10.6 Scale-Up of Multicolumn Countercurrent Chromatography

10.7 Multicolumn Countercurrent Chromatography as Replacement for Batch Chromatography Unit Operations

10.8 Multicolumn Countercurrent Chromatography in Continuous Manufacturing

10.9 Process Analytical Tools for Multicolumn Countercurrent Processes

References

## Chapter 11: Monoclonal Antibody Continuous Processing Enabled by Single Use

11.1 Introduction

11.2 Continuous Downstream Processing for Monoclonal Antibodies Unit Operation Development

11.3 Pilot-Scale Demonstration of the Integrated Continuous Process

11.4 Summary

References

## Chapter 12: Continuous Production of Bacteriophages

12.1 Bacteriophages

12.2 Bacteriophage Cultivation

### [12.3 Continuous Purification of Bacteriophages](#)

### [12.4 Conclusions](#)

### [References](#)

## [Chapter 13: Very High Cell Density in Perfusion of CHO Cells by ATF, TFF, Wave Bioreactor, and/or CellTank Technologies – Impact of Cell Density and Applications](#)

### [13.1 Introduction](#)

### [13.2 Equipment](#)

### [13.3 Results and Discussion](#)

### [13.4 Conclusions](#)

### [Acknowledgments](#)

### [References](#)

## [Chapter 14: Implementation of CQA \(Critical Quality Attribute\) Based Approach for Development of Biosimilars](#)

### [14.1 Background](#)

### [14.2 Biosimilar Product Development](#)

### [14.3 Attributes/Parameters in Biopharmaceuticals](#)

### [14.4 Quality Attributes and Biosimilars Development](#)

### [14.5 Quality, Safety, and Efficacy of Biosimilars](#)

### [14.6 Implementing CQA Approach for Biosimilar Development](#)

### [14.7 Summary](#)

### [References](#)

## [Chapter 15: Automated Single-Use Centrifugation Solution for Diverse Biomanufacturing Process](#)

### [15.1 Introduction](#)

### [15.2 Separation by Centrifugation](#)

### [15.3 Separation by Filtration](#)

[15.4 Downstream Process Challenges of High Cell Density Cultures](#)

[15.5 Single-Use Centrifugation](#)

[15.6 kSep Technology](#)

[15.7 kSep System Configuration](#)

[15.8 Low-Shear Process](#)

[15.9 Perfusion](#)

[15.10 Concentration, Media Replacement, and Harvest of Cells](#)

[15.11 Continuous Harvest Clarification](#)

[15.12 Separation of Cells from Microcarriers](#)

[15.13 Summary](#)

[References](#)

[Chapter 16: The Review of Flexible Production Platforms for the Future](#)

[16.1 Introduction](#)

[16.2 Today's Processing Technology Advances](#)

[16.3 Today's Facility Designs](#)

[16.4 Future Processing and Facility Requirements](#)
