[Website ad](#)

[Title page](#)

[Copyright page](#)

[Preface to the first edition](#)

[Preface to the third edition](#)

[Acknowledgements](#)

[List of abbreviations](#)

[Part 1: Overview](#)

[1: The place of genetics in medicine](#)

[The case for genetics](#)

[Genes in development](#)

[Genotype and phenotype](#)

[Genetics in medicine](#)

[The application of genetics](#)

[Part 2: The Mendelian approach](#)

[2: Pedigree drawing](#)

Overview

The medical history

Rules for pedigree diagrams

The practical approach

Use of pedigrees

3: Mendel's laws

Overview

The principle of unit inheritance

The principle of dominance

The principle of segregation

The principle of independent assortment

The test-mating

Matings between double heterozygotes

Biological support for Mendel's laws

Exceptions to Mendel's laws

Conclusion

4: Principles of autosomal dominant inheritance and pharmacogenetics

Overview

Rules for autosomal dominant inheritance

Estimation of risk

Estimation of mutation rate

Pharmacogenetics

5: Autosomal dominant inheritance, clinical examples

Overview

Disorders of the fibroblast growth factor receptors

Achondroplasia

Marfan syndrome (MFS)

Familial hypercholesterolaemia (FH)

Dentinogenesis imperfecta 1 (DGI)

Otosclerosis 1 (OTSC1)

Adult polycystic kidney disease (APKD, PKD)

Multiple hereditary exostoses (EXT)

6: Autosomal recessive inheritance, principles

Overview

Rules for autosomal recessive inheritance

Estimation of risk

7: Consanguinity and major disabling autosomal recessive conditions

Overview

Consanguineous matings

Incestuous matings

First cousin marriages

Mental handicap

Oculocutaneous albinism

Recessive blindness

Retinitis pigmentosa (RP)

Severe congenital deafness

Connexin 26 defects (CX26)

Pendred syndrome (PDS)

8: Autosomal recessive inheritance, life-threatening conditions

Overview

Cystic fibrosis (CF)

Tay-Sachs disease, GM2 gangliosidosis

Phenylketonuria (PKU)

Spinal muscular atrophy (SMA)

9: Aspects of dominance

Overview

Codominance (Co-D), the ABO blood groups

Incomplete dominance, overdominance and heterosis

Incomplete penetrance

Delayed onset

Variable expressivity

Neurofibromatosis type 1 (NF1), Von Recklinghausen disease

10: X-linked and Y-linked inheritance

Overview

Rules of X-linked recessive inheritance

Estimation of risk for offspring

X-linked dominant disorders

Y-linked or holandric inheritance

Pseudoautosomal inheritance or 'partial sex linkage'

Sex limitation and sex influence

11: X-linked inheritance, clinical examples

Introduction

Haemophilia A (HbA), classic haemophilia

Red and green colour blindness

Duchenne muscular dystrophy (DMD)

Becker muscular dystrophy (BMD)

Fragile X syndrome (FRAX-A [and FRAX-E])

Vitamin D-resistant rickets, hypophosphataemic rickets

Hereditary motor and sensory neuropathy (HMSN), Charcot-Marie-Tooth disease

Incontinentia pigmenti (IP)

Barth syndrome, X-linked cardioskeletal myopathy, endocardial fibroelastosis

Rett syndrome

12: Mitochondrial inheritance

Overview

Mitochondrial disorders

Rules of mitochondrial inheritance

Examples

Maternally transmitted ototoxic deafness

13: Risk assessment in Mendelian conditions

Overview

Risk assessment

Bayes' theorem

Application of Bayes' theorem

[Isolated cases](#)
[Empiric risks](#)

[Part 3: Basic cell biology.](#)

[14: The cell](#)

[Overview](#)
[The plasma membrane](#)
[The nucleus](#)
[The cytoplasm](#)
[The secretion pathway](#)
[Endocytosis](#)
[Cell junctions](#)
[Medical issues](#)

[15: The chromosomes](#)

[Overview](#)
[Chromatin structure](#)
[Chromosome banding](#)
[The centromere](#)
[The telomeres](#)
[Euchromatin and heterochromatin](#)

[16: The cell cycle](#)

[Overview](#)
[G1-phase](#)
[S-phase](#)
[Mitosis or M-phase](#)
[The centrosome cycle](#)

Medical issues

17: Biochemistry of the cell cycle

Overview

The G1/S checkpoint

The G2/M checkpoint

The M-phase checkpoint

18: Gametogenesis

Overview

Meiosis I

Prophase I

Metaphase I, anaphase I, telophase I, cytokinesis I

Meiosis II

Male meiosis

Female meiosis

The significance of meiosis

Part 4: Basic molecular biology

19: DNA structure

Overview

The structure of DNA

The centromeres

The telomeres

Structural classes of human DNA

Medical and legal issues

20: DNA replication

Overview

Replication

Replication of the telomeres

Repair systems

Medical issues

21: The structure of genes

Overview

The structure of a typical gene

Gene length

Genes that share a promoter

Overlapping genes

Chromatin conformation

Medical issues

22: Production of messenger RNA

Overview

Transcription factors

Transcription

RNA processing

Medical issues

23: Non-coding RNA

Overview

Heterogeneous nuclear and messenger RNA

Long non-coding RNA

Transfer RNA

Ribosomal RNA

[Small nuclear RNA](#)

[Signal recognition particle RNA](#)

[MicroRNAs](#)

[Medical issues](#)

[24: Protein synthesis](#)

[Overview](#)

[The genetic code](#)

[Translation](#)

[Protein structure](#)

[Post-translational modification](#)

[Medical issues](#)

[Part 5: Genetic variation](#)

[25: Types of genetic alterations](#)

[Overview](#)

[Substitutions, deletions, insertions, frameshifts and duplications](#)

[Copy number variation](#)

[Transcriptional control](#)

[RNA processing](#)

[Mobile elements](#)

[Haemoglobinopathies](#)

[Haemophilia A](#)

[Nomenclature of mutations](#)

[26: Mutagenesis and DNA repair](#)

[Overview](#)

[Chemical mutagenesis](#)
[Electromagnetic radiation](#)
[Ultraviolet light](#)
[Atomic radiation](#)
[Biological effects of radiation](#)
[Safety measures when using X-rays](#)
[DNA repair](#)

[27: Genomic imprinting](#)

[Overview](#)
[Prader-Willi and Angelman syndromes \(P-WS and AS\)](#)
[Beckwith-Wiedemann syndrome \(B-WS\)](#)
[Maintenance methylase](#)

[28: Dynamic mutation](#)

[Overview](#)
[The triplet repeat disorders](#)
[Huntington disease \(HD\); Huntington's chorea](#)
[Fragile X disease A \(FRAX-A\)](#)
[Myotonic dystrophy type 1 \(MD1\)](#)

[29: Normal polymorphism](#)

[Overview](#)
[Environment-related polymorphism](#)
[Selection by malaria](#)
[Resistance to Human Immunodeficiency Virus, HIV](#)
[Transfusion and transplantation](#)

Drug metabolism

30: Allele frequency

Overview

The Hardy-Weinberg law

Necessary conditions

Applications of the Hardy-Weinberg law

Examples

Consequence of medical intervention

Measures of disease frequency

Part 6: Organization of the human genome

31: Genetic linkage and genetic association

Overview

Genetic linkage

Genetic mapping

The Human Genome Project (HGP)

Genetic association

32: Physical gene mapping

Overview

Chromosome assignment

Regional mapping

High-resolution mapping

33: Gene identification

Overview

Identification of genes with known gene products

Positional cloning

Gene identification by whole exome/whole genome sequencing

34: Clinical application of linkage and association

Overview

Linkage analysis

Association analysis

Part 7: Cytogenetics

35: Chromosome analysis

Overview

Preparation of a karyotype

Use of unique sequence probes

Chromosome painting

Primed *in situ* hybridization

Comparative genome hybridization (CGH)

Multiplex PCR screening for aneuploidy

Indications for chromosome analysis

36: Autosomal aneuploidies

Overview

Aetiology

[Down syndrome \(DS\)](#)

[37: Sex chromosome aneuploidies](#)

[Overview](#)

[Klinefelter syndrome](#)

[Turner syndrome, X chromosome monosomy](#)

[47,XYY syndrome](#)

[Triple-X syndrome](#)

[38: Chromosome structural abnormalities](#)

[Overview](#)

[Somatic mosaicism](#)

[Translocations](#)

[Deletions \(code: 'del'\)](#)

[Ring chromosomes \(code: 'r'\)](#)

[Duplications \(code: 'dup'\)](#)

[Inversions \(code: 'inv'\)](#)

[Isochromes \(code: 'iso'\)](#)

[Fragile sites \(code: 'fra'\)](#)

[39: Chromosome structural abnormalities, clinical examples](#)

[Overview](#)

[Deletions and segmental aneuploidies](#)

[Autosomal translocations](#)

[X-autosome translocations](#)

[40: Contiguous-gene and single-gene syndromes](#)

Overview

Contiguous gene deletion syndromes

Contiguous gene duplication syndrome

Single-gene syndromes

Part 8: Embryology and congenital abnormalities

41: Human embryology in outline

Overview

The pre-embryo (weeks 0-2)

The embryo (weeks 2-8)

The fetus (weeks 8-38)

Expected date of delivery (EDD)

42: Body patterning

Overview

The main body

The limbs

43: Sexual differentiation

Overview

X chromosome inactivation

Early development

The ovary

The testis

Genital ducts

External genitalia

Descent of the testis

Puberty

Medical issues

44: Abnormalities of sex determination

Overview

Problems in genetic females

Problems in genetic males

45: Congenital abnormalities, pre-embryonic, embryonic and of intrinsic causation

Overview

Classification of defects

Timing and aetiology

Defects of the CNS

Congenital heart defects

Gastro-intestinal (GI) tract defects

46: Congenital abnormalities arising at the fetal stage

Overview

Pathogenic mechanisms

Maternal illness

Maternal infection

Congenital deformations

Limb malformations

The role of chemicals

Physical agents

47: Development of the heart

Overview

Initial development

Formation of cardiac septa

Septum formation in the atrium

Septum formation in the ventricles

Septum formation in the atrioventricular canal

Septum formation in the truncus arteriosus and conus cordis

Circulatory changes at birth

48: Cardiac abnormalities

Overview

Circulatory changes at birth

Clinically significant defects

49: Facial development and dysmorphology

Overview

Fetal alcohol syndrome

Development of the face

Facial clefts

Classification of abnormal developmental features

Assessment of development

Clinically important growth parameters

Diagnosis in dysmorphology

Part 9: Multifactorial inheritance and twin studies

50: Principles of multifactorial disease

Overview

Continuous variation

Heritability (h^2)

Estimation of risk

Discontinuous variation, multifactorial threshold traits

Rules for identification of a multifactorial threshold trait

51: Multifactorial disease in children

Overview

Methodology

Examples

52: Common disorders of adult life

Overview

Odds ratios

Coronary artery disease (CAD)

Cardiomyopathy (see Chapters and)

Hypertension

Stroke

Type 2 diabetes mellitus and MODY

Low intelligence

Schizophrenia

[Affective disorder](#)
[Alzheimer disease](#)
[Obesity](#)
[Alcoholism](#)

[53: Twin studies](#)

[Overview](#)
[Frequency of multiple births](#)
[Analysis of discontinuous multifactorial traits](#)
[Analysis of continuously variable multifactorial traits](#)
[Health risks in twins](#)
[Copy number variation \(CNV\)](#)
[Weaknesses of the twin study approach](#)

[Part 10: Cancer](#)

[54: The signal transduction cascade](#)

[Overview](#)
[Environmental triggers](#)
[Viruses](#)
[Tumour suppressor proteins](#)
[The signal transduction cascade](#)
[Conversion of proto-oncogenes to oncogenes](#)
[Enabling characteristics](#)

[55: The eight hallmarks of cancer](#)

[Overview](#)
[1 Self-sufficiency in mitotic stimulation](#)

- [2 Evasion of growth suppressors](#)
- [3 Resistance to apoptosis](#)
- [4 Limitless replicative potential](#)
- [5 Sustained angiogenesis](#)
- [6 Tissue invasion and metastasis](#)
- [7 Reprogramming of cellular energy metabolism](#)
- [8 Evasion of immune destruction](#)
- [Cancer stem cells](#)

[56: Familial cancers](#)

[Overview](#)

[Indicators of inherited cancer](#)

[The two-hit hypothesis](#)

[The multi-hit hypothesis](#)

[Oncogenes](#)

[57: Genomic approaches to cancer management](#)

[Overview](#)

[Analysis of tumour gene expression](#)

[Analysis of cancer genomes](#)

[Genetic testing in cancer diagnosis](#)

[Genetic testing and treatment of cancer](#)

[Part 11: Biochemical genetics](#)

[58: Disorders of amino acid metabolism](#)

[Inborn errors of metabolism](#)

[Enzyme deficiencies and disease](#)

Errors in amino acid metabolism

59: Disorders of carbohydrate metabolism

Overview

Lactose intolerance

Galactosaemia

Fructose intolerance

Diabetes mellitus

Glycogen storage disorders (GSDs)

60: Metal transport, lipid metabolism and amino acid catabolism defects

Metal transport defects

Lipid metabolism

Acidaemia and aciduria due to defective amino acid catabolism

61: Disorders of porphyrin and purine metabolism and the urea/ornithine cycle

Overview

Biosynthesis of haem

Porphyria

Errors of purine metabolism

Disorders of the urea/ornithine cycle

62: Lysosomal, glycogen storage and peroxisomal diseases

Overview

Sphingolipidoses, lipid storage disorders (LSDs)

Mucopolysaccharidoses (MPSs)

Peroxisomal disease

Glycogen storage disorders

63: Biochemical diagnosis

Overview

Inborn errors of metabolism

Approaches to diagnosis

Part 12: Immunogenetics

64: Immunogenetics, cellular and molecular aspects

Overview

The innate immune system

The adaptive immune system

Memory cells

The major histocompatibility complex (MHC)

The immunoglobulins

The T-cell receptor (TCR)

The immune system in pregnancy

65: Genetic disorders of the immune system

Overview

Hypersensitivity

Disorders of innate humoral immunity

Disorders of innate cell-mediated immunity

[Disorders of adaptive humoral immunity](#)
[Disorders of adaptive cell-mediated immunity](#)
[Associated and secondary immunodeficiency](#)
[Immune system subversion](#)

[66: Autoimmunity, HLA and transplantation](#)

[Overview](#)

[Acquisition of tolerance](#)

[Autoimmune disease](#)

[Causes of autoimmunity](#)

[Explanations for HLA-disease association](#)

[Tissue incompatibility in transfusion and transplantation](#)

[Part 13: Molecular diagnosis](#)

[67: DNA hybridization-based analysis systems](#)

[Overview](#)

[DNA probes](#)

[Restriction endonucleases and DNA polymorphism](#)

[Gel electrophoresis](#)

[DNA hybridization in Southern blotting](#)

[Methodological variants](#)

[Diagnostic applications](#)

[68: DNA sequencing](#)

Overview

The dideoxy-DNA sequencing method

Iterative pyrosequencing

Massively parallel, or next-generation, DNA sequencing

69: The polymerase chain reaction

Overview

The polymerase chain reaction

70: DNA profiling

Overview

Application of Southern blotting

Application of the polymerase chain reaction (PCR)

The modern approach to proof of identification

Part 14: Genetic counselling, disease management, ethical and social issues

71: Reproductive genetic counselling

Overview

Communication

Comprehension

Care

Reproductive options

X-linked disease

72: Prenatal sampling

Overview

Non-invasive procedures

Invasive procedures

Preimplantation genetic diagnosis

Problems of prenatal sampling

73: Avoidance and prevention of disease

Overview

Preimplantation diagnosis

Prenatal screening

Neonatal screening

Screening for adult-onset disease

Occupational screening

Limitations of genetic testing

Genetic registers

Prophylactic surgery

Therapeutic cloning

74: Management of genetic disease

Overview

Pharmacogenomics

Gene therapy

Modification of the properties of proteins

Correction of metabolic dysfunction

Modification of gross phenotype

75: Ethical and social issues in clinical genetics

Overview

The Darwinian perspective

An historical perspective

The religious perspective

Application of ethical principles

Non-directiveness in genetic counselling

Confidentiality

Conflicts of interest between family members

Genetic testing of children

Genetic screening

Additional problems in genetic counselling

Areas of ethical challenge arising from new reproductive technologies

Self-assessment case studies: questions

Case 1: Unbalanced translocation

Case 2: A metabolic problem

Case 3: A child with skin spots

Case 4: Muscle weakness

Case 5: Cancer in the family

Case 6: Targeted treatment

Case 7: Worries about senility

Case 8: A sleepy infant

Case 9: Advance warning

Case 10: Enzyme replacement

Case 11: Autism spectrum disorder

Case 12: Exome sequencing

Case 13: Direct-to-consumer genomic testing

Case 14: Treatment of genetic disorders

[Case 15: Pharmacogenetics](#)

[Self-assessment case studies: answers](#)

[Glossary](#)

[Appendix 1: the human karyotype](#)

[Appendix 2: information sources and resources](#)

[Index](#)

Medical Genetics at a Glance

Dorian J. Pritchard

BSc, Dip Gen, PhD, CBiol, MSB
Emeritus Lecturer in Human Genetics
University of Newcastle-upon-Tyne
UK
Former Visiting Lecturer in Medical Genetics
International Medical University
Kuala Lumpur
Malaysia

Bruce R. Korf

MD, PhD
Wayne H. and Sara Crews Finley Chair in Medical Genetics
Professor and Chair, Department of Genetics
Director, Heflin Center for Genomic Sciences
University of Alabama at Birmingham
Alabama
USA

Third edition

 **WILEY-BLACKWELL**
A John Wiley & Sons, Ltd., Publication

This edition first published 2013 © 2013 by John Wiley & Sons, Ltd

Previous editions 2003, 2008 © Dorian J. Pritchard, Bruce R. Korf.

Wiley-Blackwell is an imprint of John Wiley & Sons, formed by the merger of Wiley's global Scientific, Technical and Medical business with Blackwell Publishing.

Registered office: John Wiley & Sons, Ltd, The Atrium, Southern Gate, Chichester, West Sussex, PO19 8SQ, UK

Editorial offices: 9600 Garsington Road, Oxford, OX4 2DQ, UK
