## **About the Authors**

Richard Hollingham is a science journalist and broadcaster for BBC radio. He has reported science from inside Chernobyl, the top of a missile silo in Kazakhstan and a crevasse in Antarctica. Richard is the author of *Blood and Guts* (BBC Books), an account of the grisly, gory and sometimes downright horrific (but frequently entertaining) history of surgery.

Sue Nelson is Editor of *The Biologist*, produces the Planet Earth podcast and presents science programmes for BBC Radio. A former science correspondent for BBC TV News, she has also written on science for most national newspapers and was awarded a national Association of British Science Writers' Award, and a Knight-Wallace journalism fellowship at the University of Michigan.
