The Chemistry of Heterocyclic Compounds

The chemistry of heterocyclic compounds is one of the most complex branches of organic chemistry. It is equally interesting for its theoretical implications, for the diversity of its synthetic procedures, and for the physiological and industrial significance of heterocyclic compounds.

A field of such importance and intrinsic difficulty should be made as readily accessible as possible, and the lack of a modern detailed and comprehensive presentation of heterocyclic chemistry is therefore keenly felt. It is the intention of the present series to fill this gap by expert presentations of the various branches of heterocyclic chemistry. The subdivisions have been designed to cover the field in its entirety by monographs which reflect the importance and the interrelations of the various compounds, and accommodate the specific interests of the authors.

In order to continue to make heterocyclic chemistry "as readily accessible as possible", new editions are planned for those areas where the respective volumes in the first edition have become obsolete by overwhelming progress. If, however, the changes are not too great so that the first editions can be brought up-to-date by supplementary volumes, supplements to the respective volumes will be published in the first edition.

Preface

The original volume, entitled *The Pyrimidines*, covered the literature published through 1957 and, subsequently, *The Pyrimidines, Supplement I* updated this coverage to 1967. The present volume, *The Pyrimidines, Supplement II*, continues this review process for the period 1968–1983, inclusive.

It is important to realize that *Supplement II* does not contain any information already recorded in the original volume or in *Supplement I*. Thus all three volumes must be used together in order to cover all the literature on any aspect of pyrimidine chemistry. Unfortunately, the two earlier volumes are now out of print but both can be obtained (at least for the present) as reprints from the Krieger Publishing Co., Inc., P.O. Box 9542, Melbourne, Florida, U.S.A., 32901.

To facilitate combined use of the three volumes, all section headings and tables in *Supplement II* include back references to the page numbers for corresponding sections or tables (if any) in the previous volumes; in such back references (as in *Beilstein*), page numbers of the original volume are preceded by *H* (for *Hauptwerk*) and those of *Supplement I* by *E* (for *Ergänzungswerk*).

Because of numerous complaints from users that the classified appendix tables of simple pyrimidines in the original volume and *Supplement I* were difficult to use effectively, such tables have been replaced in *Supplement II* by a single rather massive alphabetical table of simple pyrimidines described from 1968 to 1983. Although old fashioned in minor respects, the original nomenclature conventions (*H* 3) have been retained to assist in the combined use of all three volumes: In particular, it should be noted that all substituents are rendered as prefixes, the common tautomeric groups are rendered in their hydroxy or mercapto form, and “hydro” is considered as an alphabetically placed substituent. The original definition of a “simple pyrimidine” (*H* 501) has also been retained to regulate inclusion in the appendix table of pyrimidines; as before, references in that table are preceded by the letter(s) *H* and/or *E* when earlier information has also appeared in appropriate tables of the original volume and/or *Supplement I*, respectively. Except in a very few cases (indicated by inclusion of a *Chemical Abstracts* citation in the reference), all information in both text and tables has been gleaned from original publications, as flagged periodically in *Chemischer Informationsdienst*

and/or *Chemical Abstracts*. For obvious pragmatic reasons, patents have been ignored in general. As in *Supplement I*, references are given in a single list for simplicity. References prior to 4329 will be found in one or the other of the earlier volumes. The indexing conventions are similar to those outlined previously (*H* 677) and are summarized again immediately prior to the Index of this volume.

The origins of papers on pyrimidine chemistry are given below for the period 1968–1983. When compared with the figures for the previous decade, 1958–1967 (*E* ix), it is evident that the marked decrease in papers from the United States, the British Commonwealth, and to a lesser extent Germany, has been balanced by a phenomenal increase in papers from Japan and Russia, while other regional contributions have remained more or less static. Indeed, Japan now stands a very close second to the United States, and Russia is only just behind Germany.

United States of America	20.17%
Japan	18.60%
British Commonwealth (and India)	14.44%
Germany (East and West)	11.72%
Russia	11.21%
Eastern Europe	7.59%
France and Switzerland	5.78%
Netherlands and Belgium	3.72%
Austria	1.86%
Italy, Spain, and South America	1.76%
Scandinavia	1.32%
Others (Israel, China, Korea, etc.)	1.86%.

Many friends have assisted enormously in the preparation of this supplementary volume. Foremost are Drs. Bill Cowden, Russell Evans (kindly assisted by Mr. H. K. Edwards), and David Fenn, who completed appropriate sections on pyrimidine *N*-oxides, reduced pyrimidines, and the nmr spectra of pyrimidines, respectively. My colleagues, Drs. Wilf Armarego, Gordon Barlin, Doug Perrin, and Ernest Spinner never failed to proffer excellent advice. Kenya Mori assisted frequently in the translation of Japanese papers. Kerry McAndrew, Abira Hassan, and Barbara Cronin gave invaluable assistance in the library, in checking the typescript, and in other ways. Despite ill health, Janice White cheerfully prepared the greater part of the typescript from my appalling handwriting, a task to which

Diane Dick, Rosemary Enge, and Caroline Cobban also contributed as time permitted. To the above good people and to my wife for her patience during the years of weekend writing, I offer my sincere thanks.

Contents

Chapter I. Introduction to the Pyrimidines (H 1, E 1)	1
4. General Summary of Pyrimidine Chemistry (H 9, E 2)	1
A. Electrophilic Substitution (H 10, E 2)	1
(1) Nitration and Nitrosation (H 10, E 2)	1
(2) Diazo Coupling (H 11)	2
(3) Halogenation (H 11, E 2)	3
(4) Sulfonation (H 11, E 2)	3
(5) Attack by Chloroform (H 11)	4
(6) Other Electrophilic Attacks (H 11, E 3)	4
C. Nucleophilic Metatheses (H 12, E 3)	5
(1) Replacement of Halogens (H 13, E 3)	5
(a) By Amino or Substituted-Amino Groups (H 13, E 4) . .	5
(b) By Alkoxy Groups (H 13, E 4)	5
(c) By Hydroxy Groups (H 14, E 5)	5
(d) By Alkylthio or Arylthio Groups (H 14, E 5)	6
(e) By Mercapto Groups (H 14, E 5)	6
(f) By Sulfo and Related Groups (H 15, E 6)	6
(g) By Other Groups (E 6)	6
(2) Replacement of Alkoxy, Alkylthio, Alkylsulfinyl, Alkylsulfonyl, and Sulfo Groups (H 15, E 6)	7
D. Other Metatheses (H 16, E 7)	8
(1) Hydroxy- to Chloropyrimidines (H 16, E 7)	8
(2) Hydroxy- to Mercaptopyrimidines (H 16, E 8)	9
(3) Mercapto- to Hydroxypyrimidines (H 17, E 8)	9
(4) Mercapto- to Aminopyrimidines (H 17, E 8)	10
(5) Amino- to Hydroxypyrimidines (H 17, E 9)	10
(6) Amino- to Halogenopyrimidines (H 18, E 9)	10
(7) Replacement of Trimethylammonio Groups (H 18, E 9) . .	11
(8) Interchange of Halogeno Substituents (E 10)	11
(9) Hydroxy- to Aminopyrimidines (New)	11
E. Addition Reactions (H 18, E 10)	12
(1) Quaternization; Dimroth Rearrangement (H 18, E 10) . . .	12
(2) Formation of <i>N</i> -Oxides (H 19, E 11)	13
(4) Photohydrates and Photodimers (H 20, E 11)	13
(5) Addition of Metal Alkyls (H 20, E 12)	14
(6) Addition of Amines (E 13)	14
F. Oxidative Reactions (H 20, E 13)	14
G. Reductive Reactions (H 21, E 13)	16
(1) Nuclear Reduction (H 21, E 13)	16
(2) Reductive Removal of Groups (H 22, E 14)	16

(3) Reductive Modification of Groups (<i>H</i> 23, <i>E</i> 14)	16
H. Modification of Substituents (<i>H</i> 24, <i>E</i> 15)	17
(1) Amino Groups (<i>H</i> 24, <i>E</i> 15)	17
(2) Hydroxy and Alkoxy Groups (<i>H</i> 25, <i>E</i> 16).	17
(3) Mercapto Groups (<i>H</i> 25).	18
(4) Alkyl and Related Groups (<i>H</i> 26, <i>E</i> 17).	18
(5) Carboxy and Related Groups (<i>E</i> 17)	19
Chapter II. The Principal Synthetic Method (<i>H</i> 31, <i>E</i> 20)	21
1. General Scope (<i>H</i> 31, <i>E</i> 20).	21
2. Use of β -Dialdehydes (<i>H</i> 32, <i>E</i> 20)	22
3. Use of β -Aldehyde Ketones (<i>H</i> 34, <i>E</i> 22).	26
4. Use of β -Diketones (<i>H</i> 36, <i>E</i> 23).	28
5. Use of β -Aldehyde Esters (<i>H</i> 38, <i>E</i> 25)	34
6. Use of β -Keto Esters (<i>H</i> 48, <i>E</i> 31).	39
7. Use of β -Diesters (Malonic Esters) (<i>H</i> 51, <i>E</i> 38).	46
8. Use of β -Aldehyde Nitriles (<i>H</i> 59, <i>E</i> 44).	52
9. Use of β -Keto Nitriles (<i>H</i> 65, <i>E</i> 47).	57
10. Use of β -Ester Nitriles (<i>H</i> 67, <i>E</i> 48).	58
11. Use of β -Dinitriles; Malononitriles (<i>H</i> 72, <i>E</i> 49).	60
Chapter III. Other Methods of Primary Synthesis (<i>H</i> 82, <i>E</i> 53).	63
1. General Remarks (<i>H</i> 82, <i>E</i> 53).	63
2. Syntheses Involving Preformed Aminomethylene Groups (<i>H</i> 82, <i>E</i> 53)	63
A. Aminomethylene Derivatives with Isocyanates (<i>H</i> 82, <i>E</i> 53)	63
B. Aminomethylene Compounds with Imino Ethers or Imidoyl Chlorides (<i>H</i> 84, <i>E</i> 56).	67
C. Aminomethylene Derivatives with Thioamides (<i>H</i> 85)	67
D. Use of Acylated Aminomethylene Derivatives (<i>H</i> 85).	67
E. The Shaw Synthesis from Aminomethyleneacylurethanes (<i>H</i> 87, <i>E</i> 56).	69
3. Syntheses Involving an Aminomethylene Group Formed <i>in Situ</i> (<i>H</i> 90, <i>E</i> 59).	71
B. Formamide with Components Containing an Active Methylene Group (<i>H</i> 91, <i>E</i> 59).	71
C. Formamide with β -Dicarbonyl and Related Compounds (<i>H</i> 92, <i>E</i> 61)	72
D. The Frankland-Kolbe and Related Syntheses from Nitriles (<i>H</i> 93, <i>E</i> 61).	73
4. Syntheses from Malondiamides, Malondiamidines, and Related Compounds (<i>H</i> 97, <i>E</i> 63)	75
A. Malondiamides with Esters: Remfry-Hull Syntheses (<i>H</i> 97, <i>E</i> 63)	75
B. Malondiamides with Amides (<i>H</i> 98, <i>E</i> 63)	76

C. Malondiamides with Carbonic Acid Derivatives (<i>H</i> 99)	77
D. The Use of Malondiamidines (<i>H</i> 100, <i>E</i> 63)	77
E. The Use of 1,3-Di-iminopropanes or Related Components (<i>New</i>)	78
F. The Use of Malonyl Dichlorides with Cyano Compounds (<i>New</i>)	79
5. Other Syntheses of Pyrimidines (<i>H</i> 101, <i>E</i> 64)	80
A. Ethoxymethyleneacetic Acid to Uracil Derivatives (<i>H</i> 101, <i>E</i> 64)	80
D. Amidines etc with Unsaturated Carbonyl Compounds (<i>H</i> 102, <i>E</i> 65)	81
E. Syntheses of Pyrimidines from Other Ring Systems (<i>H</i> 103, <i>E</i> 66)	82
(1) Pyrimidines from Imidazoles (<i>H</i> 103, <i>E</i> 66)	82
(2) Pyrimidines from Mixed 5- or 6-Membered Heterocycles (<i>H</i> 104, <i>E</i> 68)	83
(3) Pyrimidines from Azoles (<i>H</i> 105, <i>E</i> 69)	87
(4) Pyrimidines from Purines and Related Heterobicycles (<i>H</i> 105, <i>E</i> 69)	87
(5) Pyrimidines from Pteridines and Other Azanaphthalenes (<i>H</i> 106, <i>E</i> 71)	90
(6) Pyrimidines from Oxaza and Thiaza Bicyclic Systems (<i>E</i> 72)	91
(7) Pyrimidines from Other Azines (<i>E</i> 74, 76)	96
F. Miscellaneous Sequences (<i>E</i> 76)	98
(2) Syntheses from Fragments with Inbuilt Oxidation Capacity (<i>E</i> 77)	98
(3) Syntheses Involving Pyrimidine Rearrangements (<i>E</i> 79)	99
(4) Syntheses Involving Benzofurans and Related Compounds (<i>E</i> 80)	99
(5) Syntheses from Isocyanates or Isothiocyanates and Active Methylene Compounds (<i>E</i> 81)	101
(6) Some Other Syntheses (<i>E</i> 81)	102
(a) Syntheses via Cyanoamino Intermediates (<i>New</i>)	102
(b) The Harris and Huppatz Synthesis (<i>New</i>)	104
(c) Syntheses from Unsaturated Isocyanates (<i>New</i>)	104
(d) Miscellaneous Sequences (<i>New</i>)	105
6. Formation of the Pyrimidine Ring in Fused Heterocycles (<i>H</i> 107, <i>E</i> 82)	108
 Chapter IV. Pyrimidine and Its <i>C</i> -Alkyl and <i>C</i> -Aryl Derivatives (<i>H</i> 116, <i>E</i> 86)	109
1. Pyrimidine (Unsubstituted) (<i>H</i> 116, <i>E</i> 86)	109
A. Preparation of Pyrimidine (<i>H</i> 116, <i>E</i> 86)	109
B. Properties of Pyrimidine (<i>H</i> 117, <i>E</i> 86)	109
C. Reactions of Pyrimidine (<i>H</i> 118, <i>E</i> 87)	111
2. <i>C</i> -Alkyl and <i>C</i> -Aryl Pyrimidines (<i>H</i> 119, <i>E</i> 87)	112

A. Preparation of Alkylpyrimidines (<i>H</i> 119, <i>E</i> 87)	112
(1) Direct Syntheses of Alkylpyrimidines (<i>H</i> 119, <i>E</i> 87)	112
(2) Alkylpyrimidines from Chlorinated Alkylpyrimidines (<i>H</i> 120, <i>E</i> 88)	112
(3) Alkylpyrimidines from Their Carboxy and Other Derivatives (<i>H</i> 120)	117
(4) Interconversion of Alkyl Groups (<i>H</i> 122, <i>E</i> 87)	118
(5) Direct Introduction of Alkyl Groups (<i>H</i> 123)	119
(6) Ethynylpyrimidines (<i>H</i> 124)	122
(7) <i>C</i> -Alkylpyrimidines by Rearrangement (<i>New</i>)	122
C. Reactions of Alkyl and Aryl Pyrimidines (<i>H</i> 124, <i>E</i> 89)	122
(1) Methyl- to Styrylpyrimidines (<i>H</i> 125, <i>E</i> 89)	122
(3) Alkyl- to Carboxypyrimidines (<i>H</i> 126, <i>E</i> 89)	123
(4) Other Oxidations of Alkylpyrimidines (<i>H</i> 128, <i>E</i> 89)	124
(5) Alkyl- to Halogenoalkylpyrimidines (<i>H</i> 130)	125
(6) Claisen Reactions of Alkylpyrimidines (<i>H</i> 131, <i>E</i> 90)	129
(7) Mannich Reactions of Methylpyrimidines (<i>H</i> 132, <i>E</i> 91)	130
(8) Other Reactions of Alkyl and Aryl Pyrimidines (<i>H</i> 134, <i>E</i> 91)	131
Chapter V. Nitro-, Nitroso-, and Arylazopyrimidines (<i>H</i> 138, <i>E</i> 94)	135
1. The Nitropyrimidines (<i>H</i> 138, <i>E</i> 94)	135
A. Preparation of Nitropyrimidines (<i>H</i> 138, <i>E</i> 95)	135
(1) Nitropyrimidines by Primary Synthesis (<i>H</i> 139, <i>E</i> 95)	135
(2) Nitropyrimidines by Nitration (<i>H</i> 139, <i>E</i> 95)	135
(3) Nitropyrimidines by Indirect Syntheses (<i>H</i> 142, <i>E</i> 97)	139
B. Reactions of Nitropyrimidines: Mainly Reduction (<i>H</i> 143, <i>E</i> 99)	140
2. Nitrosopyrimidines (<i>H</i> 146, <i>E</i> 102)	146
A. Preparation of Nitrosopyrimidines (<i>H</i> 147, <i>E</i> 102)	146
(1) Nitrosopyrimidines by Nitrosation (<i>H</i> 148, <i>E</i> 102)	147
(2) Nitrosopyrimidines by Other Means (<i>H</i> 149, <i>E</i> 103)	149
B. Reactions of Nitrosopyrimidines (<i>H</i> 149, <i>E</i> 103)	150
(1) Reduction of Nitrosopyrimidines (<i>H</i> 149, <i>E</i> 104)	150
(2) Other Reactions of Nitrosopyrimidines (<i>H</i> 151, <i>E</i> 104)	152
3. The Arylazopyrimidines (<i>H</i> 152, <i>E</i> 108)	153
A. Preparation of Arylazopyrimidines (<i>H</i> 152, <i>E</i> 108)	153
(1) Arylazopyrimidines by Primary Synthesis (<i>H</i> 152, <i>E</i> 108)	153
(2) Arylazopyrimidines by Coupling (<i>H</i> 153, <i>E</i> 108)	153
(3) Other Preparations of Arylazopyrimidines (<i>H</i> 155)	155
B. Reactions of Arylazopyrimidines (<i>H</i> 156, <i>E</i> 109)	155
Chapter VI. Halogenopyrimidines (<i>H</i> 162, <i>E</i> 110)	157
1. Preparation of 2-, 4-, and 6-Halogenopyrimidines (<i>H</i> 162, <i>E</i> 110)	157

A. Chloropyrimidines from Hydroxypyrimidines with Phosphoryl Chloride (<i>H</i> 162, <i>E</i> 110)	157
(1) Simple Cases (<i>H</i> 162, <i>E</i> 110)	157
(2) In the Presence of a Nitro Group (<i>H</i> 163, <i>E</i> 111).	159
(3) In the Presence of Amino Groups (<i>H</i> 163, <i>E</i> 112)	159
(4) In the Presence of Any Other Group (<i>H</i> 164, <i>E</i> 113)	161
(5) In the Presence of Two Different Groups (<i>E</i> 114)	163
B. Use of Phosphorus Pentachloride to Produce Chloropyrimidines (<i>H</i> 165, <i>E</i> 115)	164
C. Other Ways of Preparing 2-, 4-, and 6-Chloropyrimidines (<i>H</i> 166, <i>E</i> 116).	164
D. Preparation of 2-, 4-, and 6-Bromopyrimidines (<i>H</i> 167, <i>E</i> 117).	166
E. Preparation of 2-, 4-, and 6-Iodopyrimidines (<i>H</i> 168, <i>E</i> 118)	166
F. Preparation of 2-, 4-, and 6-Fluoropyrimidines (<i>E</i> 118).	167
2. Preparation of 5-Halogenopyrimidines (<i>H</i> 168, <i>E</i> 119)	168
A. 5-Halogenopyrimidines by Direct Halogenation (<i>H</i> 169, <i>E</i> 119)	168
C. Other Methods for Preparing 5-Halogenopyrimidines (<i>H</i> 175, <i>E</i> 122).	174
3. Preparation of Extranuclear Halogenopyrimidines (<i>H</i> 176, <i>E</i> 122)	174
A. By Direct Halogenation (<i>H</i> 176, <i>E</i> 122).	174
B. From the Corresponding Hydroxyalkylpyrimidines (<i>H</i> 178, <i>E</i> 123).	175
D. By Direct Primary Synthesis (<i>H</i> 179, <i>E</i> 124).	177
E. By Other Means (<i>H</i> 180, <i>E</i> 125).	177
5. Reactions of 2-, 4-, and 6-Halogenopyrimidines (<i>H</i> 183, <i>E</i> 126)	180
A. Removal of 2-, 4-, and 6-Halogens (<i>H</i> 183, <i>E</i> 126)	180
(1) In the Presence of Only Alkyl or Aryl Groups (<i>H</i> 183, <i>E</i> 127).	180
(2) In the Presence of Amino Groups (<i>H</i> 185, <i>E</i> 127)	181
(3) In the Presence of Other Groups (<i>H</i> 185, <i>E</i> 127)	182
(4) Indirect Removal of Halogeno Substituents (<i>H</i> 187, <i>E</i> 128).	183
B. Replacement of 2-, 4-, and 6-Halogens by Amino Groups (<i>H</i> 187, <i>E</i> 129)	183
(1) Aminolysis of Simple Halogenopyrimidines (<i>H</i> 188, <i>E</i> 129).	184
(a) With One Active Halogen (<i>H</i> 188, <i>E</i> 129).	184
(b) With Two or Three Active Halogens (<i>H</i> 188, <i>E</i> 131).	185
(2) Aminolysis of Halogenonitropyrimidines (<i>H</i> 193, <i>E</i> 134)	188
(a) Aminolysis of Monochloronitropyrimidines (<i>H</i> 193, <i>E</i> 134).	188
(b) Aminolysis of 2,4-Dichloronitropyrimidines (<i>H</i> 193, <i>E</i> 134).	189
(c) Aminolysis of 4,6-Dichloronitropyrimidines (<i>H</i> 195, <i>E</i> 136).	190
(d) Aminolysis of 2,4,6-Trichloronitropyrimidine (<i>H</i> 196, <i>E</i> 137).	191

(3) Aminolysis of 5-Aminochloropyrimidines (<i>H</i> 196, <i>E</i> 137) . .	192
(4) Aminolysis of Halogeno-(hydroxy, alkoxy, or oxo)pyrimidines (<i>H</i> 197, <i>E</i> 138)	192
(5) Aminolysis of Chloroalkylthiopyrimidines (<i>H</i> 198, <i>E</i> 140) .	194
(6) Aminolysis of Chloropyrimidines Substituted by Other Groups (<i>H</i> 199, <i>E</i> 141).	194
C. Replacement of 2-, 4-, and 6-Chloro by Hydrazino, Hydroxy-amino, Azido and Related Groups (<i>H</i> 199, <i>E</i> 143).	198
D. Replacement of 2-, 4-, and 6-Halogens by Alkoxy Groups (<i>H</i> 201, <i>E</i> 145)	201
E. Replacement of 2-, 4-, and 6-Halogens by Hydroxy Groups (<i>H</i> 203, <i>E</i> 148)	206
F. Replacement of 2-, 4-, and 6-Chloro by Alkylthio and Arylthio Groups (<i>H</i> 205, <i>E</i> 149).	207
G. Replacement of 2-, 4-, and 6-Halogens by Mercapto Groups (<i>H</i> 205, <i>E</i> 150)	208
H. Replacement of 2-, 4-, and 6-Halogens by Other Sulphur-Containing Groups (<i>H</i> 207, <i>E</i> 152).	211
I. Other reactions of 2-, 4-, and 6-Chloropyrimidines (<i>H</i> 208, <i>E</i> 153)	212
6. Reactions of 5-Halogenopyrimidines (<i>H</i> 210, <i>E</i> 156)	215
A. The Action of Amines on 5-Halogenopyrimidines (<i>H</i> 210, <i>E</i> 156).	215
B. Other Reactions of 5-Halogenopyrimidines (<i>H</i> 211, <i>E</i> 153)	216
7. Reactions of Extranuclear Halogenopyrimidines (<i>H</i> 214, <i>E</i> 160).	220
Chapter VII. Hydroxy- and Alkoxypyrimidines (<i>H</i> 227, <i>E</i> 166)	225
1. Preparation of 2-, 4-, and 6-Hydroxypyrimidines (<i>H</i> 227, <i>E</i> 166)	225
A & B. By Primary Syntheses (<i>H</i> 227, 228; <i>E</i> 166).	225
C. By Hydrolysis of Halogenopyrimidines (<i>H</i> 228, <i>E</i> 167).	225
D. From Aminopyrimidines (<i>H</i> 229, <i>E</i> 167)	226
E. From Alkoxypyrimidines (<i>H</i> 232, <i>E</i> 169).	228
F. From Mercaptopyrimidines and Related Derivatives (<i>H</i> 233, <i>E</i> 170).	230
(1) <i>Via</i> Hydrolysis of Alkylthiopyrimidines (<i>H</i> 233, <i>E</i> 171)	230
(2) <i>Via</i> Hydrolysis of Sulfo- or Sulfinopyrimidines (<i>H</i> 234, <i>E</i> 172).	233
(3) <i>Via</i> Hydrolysis of Alkylsulfonyl- or Alkylsulfinylpyrimidines (<i>H</i> 236, <i>E</i> 172)	234
G. By Reductive Cleavage of Benzyloxypyrimidines (<i>H</i> 237, <i>E</i> 173)	234
H. By Other Methods (<i>E</i> 173)	235
2. Preparation of 5-Hydroxypyrimidines (<i>H</i> 237, <i>E</i> 173)	236
3. Preparation of Extranuclear Hydroxypyrimidines (<i>H</i> 241, <i>E</i> 174).	238
A. By Primary Synthesis (<i>H</i> 242, <i>E</i> 175)	238
B. From Amino Derivatives (<i>H</i> 242, <i>E</i> 175)	238
C. From Halogeno Derivatives (<i>H</i> 243, <i>E</i> 175)	239

D. From Esters (<i>H</i> 243, <i>E</i> 175)	239
E. By the Action of Formaldehyde (<i>H</i> 243, <i>E</i> 176)	239
F. From Pyrimidine Aldehydes and Ketones (<i>H</i> 244, <i>E</i> 176)	240
G. By Hydroxyalkylation (<i>H</i> 244, <i>E</i> 177).	241
H. By Other Means (<i>H</i> 274, <i>E</i> 177).	242
4. Preparation of Alkoxy- and Aryloxy- pyrimidines (<i>H</i> 245, <i>E</i> 178)	243
A. By Primary Synthesis (<i>H</i> 245, <i>E</i> 178)	243
B. From Halogenopyrimidines (<i>H</i> 246, <i>E</i> 178)	243
C. By Other Displacement Reactions (<i>H</i> 247, <i>E</i> 179)	243
D. By <i>O</i> -Alkylation of Hydroxypyrimidines (<i>H</i> 247, <i>E</i> 179)	245
E. Other Routes (<i>New</i>).	248
5. Fine Structure of Hydroxypyrimidines (<i>H</i> 249, <i>E</i> 180).	248
6. Reactions of Hydroxypyrimidines (<i>H</i> 250, <i>E</i> 183).	250
A. Conversion into Halogenopyrimidines (<i>H</i> 250, <i>E</i> 183)	250
B. Conversion into Mercaptopyrimidines (<i>H</i> 251, <i>E</i> 183)	250
C. <i>O</i> -Acylation and Related Reactions (<i>H</i> 252, <i>E</i> 185)	252
D. <i>O</i> -Trimethylsilylation (<i>New</i>)	254
E. Semidirect Aminolysis (<i>New</i>).	255
F. Oxidative and Reductive Reactions (<i>New</i>)	257
G. Other Reactions (<i>New</i>).	258
7. Reactions of Alkoxy- and Aryloxy- pyrimidines (<i>H</i> 254, <i>E</i> 189).	259
A. Conversion into Hydroxypyrimidines (<i>H</i> 254, <i>E</i> 189).	259
B. Conversion into Halogenopyrimidines (<i>H</i> 254, <i>E</i> 190)	260
C. Aminolysis of Alkoxy- pyrimidines (<i>H</i> 255, <i>E</i> 190)	260
D. Rearrangement of Alkoxy- pyrimidines (<i>H</i> 256, <i>E</i> 192)	261
E. Other Reactions of Alkoxy- pyrimidines (<i>New</i>).	261
8. Some Naturally Occurring Hydroxypyrimidines (<i>H</i> 256, 258; <i>E</i> 193).	262
A & B. Uracil and Thymine (<i>H</i> 256, <i>E</i> 193)	262
C. Divicine: 2,4-Diamino-5,6-dihydroxypyrimidine (<i>H</i> 259, <i>E</i> 198)	268
E. Isouramil: 4-Amino-2,5,6-trihydroxypyrimidine (<i>H</i> 260)	268
F. Sparsomycin (<i>New</i>)	268
9. The Alloxan Group of Pyrimidines (<i>H</i> 260, <i>E</i> 199)	268
Chapter VIII. Sulfur-Containing Pyrimidines (<i>H</i> 272, <i>E</i> 202)	269
1. The Mercaptopyrimidines (<i>H</i> 272, <i>E</i> 202)	269
A. Preparation of 2- and 4/6-Mercaptopyrimidines (<i>H</i> 272, <i>E</i> 202)	269
B & C. Preparation of 5- or Extranuclear-Mercaptopyrimidines (<i>H</i> 276, <i>E</i> 202)	270
D. Reactions of 2- and 4/6-Mercaptopyrimidines (<i>H</i> 277, <i>E</i> 203)	271
(1) Removal of Mercapto Groups (<i>H</i> 277, <i>E</i> 203).	271
(2) <i>S</i> -Alkylation of Mercaptopyrimidines (<i>H</i> 282, <i>E</i> 206).	272
(3) Mercapto- to Hydroxypyrimidines (<i>H</i> 284, <i>E</i> 212).	276
(5) Mercapto- to Aminopyrimidines (<i>H</i> 284, <i>E</i> 212)	276
(6) <i>S</i> -Acylation of Mercaptopyrimidines (<i>H</i> 286)	278

(7) Oxidation of Mercaptopyrimidines (<i>H</i> 286, <i>E</i> 213)	278
(8) Other Reactions of Mercaptopyrimidines (<i>E</i> 214)	278
E. Reactions of 5- and Extranuclear-Mercaptopyrimidines (<i>H</i> 286, <i>E</i> 215).	279
2. The Thioethers: Alkyl- and Arylthiopyrimidines (<i>H</i> 286, <i>E</i> 217) . . .	280
A. Preparation of 2- and 4/6-Alkylthiopyrimidines (<i>H</i> 286, <i>E</i> 217) . .	280
B. Preparation of 5-Alkylthiopyrimidines (<i>H</i> 288, <i>E</i> 217)	281
C. Reactions of Alkylthiopyrimidines (<i>H</i> 288, <i>E</i> 217)	282
(1) Reductive Removal of Alkylthio Groups (<i>H</i> 288, <i>E</i> 203). . .	282
(2) Alkylthio- to Hydroxypyrimidines (<i>H</i> 289, <i>E</i> 217).	282
(3) Aminolysis of Alkylthiopyrimidines (<i>H</i> 289, <i>E</i> 217).	282
(4) Alkylthio- to Mercaptopyrimidines (<i>H</i> 291, <i>E</i> 217)	285
(5) Oxidation of Alkylthiopyrimidines (<i>H</i> 291, <i>E</i> 217)	285
(6) Miscellaneous Reactions (<i>New</i>)	285
3. Dipyriminyl Disulfides and Sulfides (<i>H</i> 291, <i>E</i> 219).	286
4. Pyrimidine Sulfonic Acids and Related Compounds (<i>H</i> 295, <i>E</i> 221) .	288
A. Preparation (<i>H</i> 295, <i>E</i> 221).	288
B. Reactions (<i>H</i> 297, <i>E</i> 222)	290
5. Alkylsulfonyl- and Alkylsulfinylpyrimidines (<i>H</i> 298, <i>E</i> 224)	291
A. Preparation (<i>H</i> 298, <i>E</i> 225).	291
B. Reactions (<i>H</i> 300, <i>E</i> 226)	294
Chapter IX. The Aminopyrimidines (<i>H</i> 306, <i>E</i> 230)	299
1. Preparation of 2- and 4/6-Aminopyrimidines (<i>H</i> 306, <i>E</i> 230)	299
C. By Direct or Indirect Amination (<i>H</i> 308)	300
H. By Other Methods Including Transamination (<i>H</i> 310, <i>E</i> 230). . . .	301
I. Modification of Existing Amino Groups (<i>H</i> 311)	302
2. Preparation of 5- and <i>N</i> -Aminopyrimidines (<i>H</i> 313, <i>E</i> 234)	303
3. Preparation of Extranuclear Aminopyrimidines (<i>H</i> 316, <i>E</i> 237)	305
A. By Reduction of Nitriles (<i>H</i> 316, <i>E</i> 237)	305
C. By the Mannich Reaction (<i>H</i> 318, <i>E</i> 237).	306
D. By Primary Syntheses (<i>H</i> 318, <i>E</i> 238)	306
E. By Other Routes (<i>H</i> 319, <i>E</i> 238)	306
4. Properties of Aminopyrimidines (<i>H</i> 320, <i>E</i> 241)	308
5. Reactions of Aminopyrimidines (<i>H</i> 321, <i>E</i> 243)	309
C. Formation of Schiff Bases (<i>H</i> 321, <i>E</i> 243)	310
D. Acyl Derivatives of Aminopyrimidines (<i>H</i> 324, <i>E</i> 245)	312
(1) Acetylation and Haloacetylation (<i>H</i> 324, <i>E</i> 245).	312
(2) Formylation (<i>H</i> 325, <i>E</i> 246)	314
(3) Other Acylations (<i>H</i> 327, <i>E</i> 247)	315
(4) Other Ways of Preparing Acylaminopyrimidines (<i>H</i> 328, <i>E</i> 249).	315
(5) Deacylation of Acylaminopyrimidines (<i>H</i> 329, <i>E</i> 249)	316
(6) Arylsulfonamidopyrimidines and the Like (<i>H</i> 329, <i>E</i> 250). .	316
E. Diazotization and Related Reactions (<i>H</i> 331, <i>E</i> 252)	317

F. Heterocycles from Aminopyrimidines (<i>H</i> 333, <i>E</i> 252)	318
G. Other Reactions (<i>H</i> 335, <i>E</i> 254).	319
6. Urethanes: Alkoxy-carbonylaminopyrimidines (<i>H</i> 336, <i>E</i> 257)	320
7. Ureidopyrimidines (<i>H</i> 339, <i>E</i> 259)	322
8. Other (Substituted-amino)pyrimidines (<i>H</i> 341, <i>E</i> 260).	324
9. Some Naturally Occurring Aminopyrimidines (<i>H</i> 346, <i>E</i> 265)	325
 Chapter X. The <i>N</i>-Alkylated Pyrimidines and the Pyrimidine <i>N</i>-Oxides (<i>H</i> 356, <i>E</i> 269)	 329
1. The Oxypyrimidines (<i>H</i> 357, <i>E</i> 269).	329
A. Preparation of Oxypyrimidines (<i>H</i> 357, <i>E</i> 269).	329
(1) & (2) By Primary Syntheses (<i>H</i> 357, <i>E</i> 269).	329
(3) By Alkylation of Hydroxypyrimidines (<i>H</i> 359, <i>E</i> 270)	330
(a) Cases with One Hydroxy Group (<i>H</i> 359, <i>E</i> 270)	330
(b) Cases with Two Hydroxy Groups (<i>H</i> 360, <i>E</i> 271)	331
(c) Cases with Three Hydroxy Groups (<i>H</i> 362, <i>E</i> 273).	335
(d) In the Presence of a Nitro Group (<i>H</i> 363, <i>E</i> 273).	335
(e) In the Presence of Amino Groups (<i>H</i> 364, <i>E</i> 273)	335
(f) In the Presence of Mercapto or Alkylthio Groups (<i>H</i> 368, <i>E</i> 275)	337
(g) In the Presence of Other Groups (<i>H</i> 369, <i>E</i> 276)	338
(4) From Alkoxy-pyrimidines (<i>H</i> 371, <i>E</i> 276).	340
(a) By the Classical Hilbert-Johnson Reaction (<i>H</i> 371, <i>E</i> 277).	340
(b) By Thermal Rearrangement (<i>H</i> 371, <i>E</i> 280)	341
(c) By the Silyl Hilbert-Johnson Reaction (<i>New</i>)	342
(5) By Hydrolysis of Iminopyrimidines (<i>H</i> 373, <i>E</i> 282)	343
(6) From Thiopyrimidines (<i>E</i> 282)	344
(7) Minor Routes (<i>New</i>)	344
B. Reactions of Oxypyrimidines (<i>H</i> 375, <i>E</i> 283)	344
2. The Iminopyrimidines (<i>H</i> 377, <i>E</i> 284).	345
A. Preparation of Iminopyrimidines (<i>H</i> 377, <i>E</i> 284).	345
B. Reactions of Iminopyrimidines: Dimroth Rearrangement (<i>H</i> 379, <i>E</i> 287)	349
3. The <i>N</i> -Alkylated Thiopyrimidines (<i>H</i> 381, <i>E</i> 294)	352
4. The Pyrimidine <i>N</i> -Oxides (<i>H</i> 382, <i>E</i> 294; by W. B. Cowden)	353
A. Preparation of Pyrimidine <i>N</i> -Oxides (<i>H</i> 382, <i>E</i> 294).	353
(1) By Direct Oxidation (<i>New</i>)	353
(2) By Primary Synthesis (<i>New</i>)	356
B. Properties and Reactions of Pyrimidine <i>N</i> -Oxides (<i>H</i> 383, <i>E</i> 295).	358
(1) ESR, Dipole Moment, and MO Studies (<i>New</i>)	358
(2) NMR Studies (<i>New</i>).	358
(3) Infrared and Ultraviolet Spectra; X-Ray Crystallography (<i>New</i>)	359
(4) Ionization Constants (<i>New</i>).	359

(5) Miscellaneous Physical Properties (<i>New</i>)	360
(6) Reductions (<i>New</i>)	360
(7) Halogenation (<i>New</i>)	361
(8) Nitrosation and Nitration (<i>New</i>)	361
(9) Acylation (<i>New</i>)	361
(10) Alkylations (<i>New</i>)	362
(11) Photochemical Reactions (<i>New</i>)	362
(12) Molecular Rearrangements (<i>New</i>)	363
(13) Biological Properties of Pyrimidine <i>N</i> -Oxides (<i>New</i>)	365
 Chapter XI. The Pyrimidine Carboxylic Acids and Related Derivatives (H 389, E 296)	367
1. The Carboxypyrimidines (<i>H 389, E 296</i>)	367
A. Preparation of Carboxypyrimidines (<i>H 389, E 296</i>)	367
(1) By Primary Synthesis (<i>H 389, E 296</i>)	367
(2) By Hydrolysis of Esters, Amides, or Nitriles (<i>H 390, E 296</i>)	367
(3) By Oxidative Procedures (<i>H 391, E 298</i>)	369
(4) By Other Means (<i>H 392, E 298</i>)	370
B. Reactions of Carboxypyrimidines (<i>H 393, E 299</i>)	371
(1) Decarboxylation (<i>H 393, E 299</i>)	372
(2) Esterification (<i>H 393, E 300</i>)	372
(3) Formation of Acid Chlorides (<i>H 294, E 301</i>)	374
(4) Other Reactions (<i>H 395, E 302</i>)	374
2. Alkoxycarbonylpyrimidines (Esters) (<i>H 395, E 302</i>)	374
A. Preparation of Esters (<i>H 395, E 302</i>)	374
B. Reactions of Esters (<i>H 396, E 304</i>)	377
3. Pyrimidine Amides, Hydrazides, and Azides (<i>H 397, E 305</i>)	378
A. Preparation of Amides (<i>H 397, E 305</i>)	378
(1) From Esters and Acid Chlorides (<i>H 397, E 305</i>)	378
(2) By Primary Syntheses (<i>H 398, E 305</i>)	379
(3) By Controlled Hydrolysis of Nitriles (<i>H 398, E 305</i>)	379
(4) By Other Means (<i>H 399, E 306</i>)	380
B. Reactions of Amides (<i>H 400, E 306</i>)	381
C. Preparation and Reactions of Hydrazides and Azides (<i>H 400, E 307</i>)	382
4. Pyrimidine Nitriles (<i>H 401, E 308</i>)	383
A. Preparation of Cyanopyrimidines (<i>H 401, E 308</i>)	383
(1) By Primary Syntheses (<i>H 401, E 308</i>)	383
(2) By Dehydration of Amides (<i>H 404, E 308</i>)	383
(3) By Other Means (<i>H 404, E 308</i>)	383
B. Reactions of Cyanopyrimidines (<i>H 405, E 309</i>)	386
5. Pyrimidine Aldehydes and Their Acetals (<i>H 406, E 311</i>)	388
A. Preparation of Formylpyrimidines (<i>H 406, E 311</i>)	388
(1) By Primary Syntheses (<i>H 406, E 311</i>)	388
(2) By Semidirect <i>C</i> -Formylation (<i>H 408, E 311</i>)	389

(3) From Cyanopyrimidines (<i>H</i> 410)	390
(4) By Other Reductive or Oxidative Processes (<i>H</i> 411, <i>E</i> 312)	390
(5) By Other Means (<i>H</i> 412, <i>E</i> 313)	391
B. Reactions of Formylpyrimidines (<i>H</i> 413, <i>E</i> 315)	391
(1) Oxidation and Reduction (<i>H</i> 413, <i>E</i> 315)	391
(2) Formation of the Usual Aldehyde Derivatives (<i>H</i> 413, <i>E</i> 315)	392
(3) Other Reactions (<i>H</i> 414, <i>E</i> 317)	393
6. Pyrimidine Ketones and Derivatives (<i>H</i> 415, <i>E</i> 317)	394
A. Preparation of <i>C</i> -Acylpyrimidines (<i>H</i> 415, <i>E</i> 317)	394
B. Reactions of <i>C</i> -Acylpyrimidines (<i>H</i> 417, <i>E</i> 318)	398
7. The Isocyanato-, Thiocyanato-, and Isothiocyanatopyrimidine Family (<i>H</i> 418, <i>E</i> 319)	399
A. Isocyanatopyrimidines (<i>H</i> 418, <i>E</i> 319)	399
B. Thiocyanatopyrimidines (<i>H</i> 419, <i>E</i> 319)	400
C. Isothiocyanatopyrimidines (<i>H</i> 421, <i>E</i> 319)	402
8. Orotic Acid (<i>H</i> 427, <i>E</i> 320)	402
Chapter XII. The Reduced Pyrimidines (<i>H</i> 430, <i>E</i> 322; by R. F. Evans)	405
1. Preparation of Dihydropyrimidines (<i>H</i> 431, <i>E</i> 323)	406
A. By a Modified Principal Synthesis (<i>H</i> 431, <i>E</i> 323)	406
B. From an Aminopropane Derivative and an Isocyanate (<i>H</i> 434, <i>E</i> 324)	417
C. From an Isocyanatopropane Derivative and an Amine (<i>H</i> 436, <i>E</i> 325)	419
E. Syntheses Involving Amide Intermediates (<i>H</i> 438)	421
F. The Biginelli Reaction (<i>H</i> 440, <i>E</i> 326)	422
G. Other Syntheses (<i>H</i> 442, <i>E</i> 326)	424
H. By Reduction of Pyrimidines (<i>H</i> 442, <i>E</i> 327)	427
I. Addition of Reagents Other than Hydrogen to a Double Bond (<i>E</i> 330)	435
2. Preparation of Tetrahydropyrimidines (<i>H</i> 445, <i>E</i> 331)	450
A. From 1,3-Diaminopropane or a Derivative (<i>H</i> 445, <i>E</i> 331)	451
B. From Carbonyl Compounds with Ammonia, Amines, or Ureas (<i>H</i> 448, <i>E</i> 336)	454
C. From 1,3-Dihalogenopropane Derivatives (<i>H</i> 449, <i>E</i> 337)	457
D. By Reduction of Pyrimidines or Dihydropyrimidines (<i>H</i> 450, <i>E</i> 337)	457
E. By Addition of Reagents Other than Hydrogen to a Pyrimidine Nucleus (<i>E</i> 341)	457
F. From Other Heterocyclic Substances (<i>E</i> 341)	459
G. Miscellaneous Preparations (<i>New</i>)	459
3. Preparation of Hexahydropyrimidines (<i>H</i> 452, <i>E</i> 341)	459
4. Reactions of Reduced Pyrimidines (<i>H</i> 454, <i>E</i> 345)	462

A. Reductions (<i>H</i> 454, <i>E</i> 345)	462
B. Oxidation (<i>H</i> 455, <i>E</i> 347)	463
C. Nitration and Nitrosation (<i>H</i> 455, <i>E</i> 348)	464
D. Acylation (<i>H</i> 456, <i>E</i> 349)	464
E. Halogenation (<i>H</i> 457, <i>E</i> 350)	465
F. Metatheses of Mercapto and Hydroxy Compounds (<i>H</i> 457, <i>E</i> 350)	465
G. <i>N</i> -Alkylation (<i>H</i> 458, <i>E</i> 350)	466
H. Other Reactions (<i>H</i> 459, <i>E</i> 351)	468
(1) Non-Hydrogenolytic Ring Openings (<i>E</i> 351)	468
(2) Reactions with Aldehydes (<i>E</i> 353)	469
(3) Miscellaneous Reactions (<i>E</i> 355)	469
5. Properties of Reduced Pyrimidines (<i>E</i> 355)	471
A. Ionization (<i>E</i> 355)	471
B. Tautomerism (<i>E</i> 357)	471
C. Nuclear Magnetic Resonance (<i>E</i> 358)	473
D. Conformation (<i>E</i> 360)	474
E. Mass Spectra (<i>E</i> 362)	475
F. Applications of Hydropyrimidines (<i>E</i> 366)	475
Chapter XIII. The Ionization and Spectra of Pyrimidines (<i>H</i> 464, <i>E</i> 368) . . .	479
1. The Ionization Constants of Pyrimidines (<i>H</i> 464, <i>E</i> 368)	479
2. Absorption Spectra of Pyrimidines (<i>H</i> 477)	479
3. The Nuclear Magnetic Resonance Spectra of Pyrimidines (<i>E</i> 386; by M. D. Fenn)	480
A. Assignment of Resonances (<i>New</i>)	480
(1) Resonances for ¹⁵ N and ¹⁴ N (<i>New</i>)	480
(2) Resonances for ¹³ C (<i>New</i>)	502
B. Differentiation of <i>O</i> - and <i>N</i> -Methylated Pyrimidines (<i>New</i>)	503
C. Hydroxy-Oxo and Mercapto-Thioxo Tautomerism (<i>New</i>)	512
D. Measurement of p <i>K</i> _a ; Protonation Sites (<i>New</i>)	514
E. Site of <i>N</i> -Oxidation (<i>New</i>)	517

CHAPTER I

Introduction to the Pyrimidines (*H 1, E 1*)

Some important and useful advances made in pyrimidine chemistry since 1970 are included in this chapter. Hence it is broadly supplementary only to the fourth section of the original Ch. I. Moreover, no attempt is made herein to cover new or improved primary syntheses, which are highlighted in Ch. II and III of this supplement. Several brief but general reviews of pyrimidine chemistry have appeared recently in English,^{6326, 6330} Italian,⁶¹⁸² and German.⁶¹⁸³

4. General Summary of Pyrimidine Chemistry (*H 9, E 2*)

A. Electrophilic Substitution (*H 10, E 2*)

(1) Nitration and Nitrosation (*H 10, E 2*)

(Ch. V, Sects. 1 and 2)

The successful nitration of 2-hydroxypyrimidine by potassium nitrate in sulfuric acid at 100°, previously reported (*E 96*) from preliminary communications, has now been confirmed and extended to 4-hydroxypyrimidine (1, R = H),⁵⁴¹¹ from which 4-hydroxy-5-nitropyrimidine (1, R = Me; 40% yield) was so made. In less difficult cases, a novel and effective procedure has been reported; the action of nitronium tetrafluoroborate in sulfolane at 20° converted 1-methyluracil (2, R = H) into its 5-nitro derivative (2, R = NO₂) in excellent yield, and analogues were made similarly.⁵⁵¹⁶ More and more examples of nitration in the presence of labile groups have emerged, as exemplified in the direct formation of 4-amino-6-dimethylamino-2-methylthio-5-nitropyrimidine (3) by using potassium nitrate/sulfuric acid at 0° (42%),⁴⁶¹⁷ or of 4-chloro-2,6-dimethoxy-5-nitropyrimidine (76%) by using fuming nitric

acid/sulfuric acid, initially at 5° and then at 80°.⁵⁹⁹⁴ Work has continued on the nitration of phenylpyrimidines in the benzene ring,^{5441, 5662, 5663, 6155} but it is still impossible to forecast the position(s) of nitration.

The poor yields obtained by regular nitrosation in aqueous media to afford 1,3-dialkyl-1,2,3,4-tetrahydro-6-methylamino-5-nitroso-2,4-dioxypyrimidines (4) have been improved dramatically by using isoamyl nitrite/ethanol; in this way, the 1,3-dicyclohexyl homologue (4, R = C₆H₁₁) was obtained in 42% yield. The oxidation of nitroso- to nitropyrimidines has continued to prove valuable. Indeed, the conversion of 2-amino- into 2-*S,S*-sulfimidopyrimidine (5) followed by oxidation to 2-nitrosopyrimidine (6, *n* = 1) and further oxidation by ozone to 2-nitropyrimidine (6, *n* = 2) has represented a landmark in pyrimidine chemistry, being the first 2/4-nitropyrimidine ever made.⁶²⁶⁷

(2) Diazo Coupling (H 11)

(Ch. V, Sect. 3.A)

Besides innumerable examples of diazo coupling at the 5-position and a few at the 4-position or on an activated methyl substituent, it has been pointed out that diazonium salts can attack amino or mercapto groups if the normal sites are insufficiently activated. This is seen in the formation of 2-*p*-chlorophenyldiazoamino-4-methylpyrimidine (7) or 2-*p*-chlorophenylthiopyrimidine (8).⁶⁰⁹⁰
