**[What's on the Companion Web site](#)**

**[What You'll Learn from This Book](#)**

**[Part I: Getting Started with  
Windows Scripting](#)**

**[Chapter 1: Introducing Windows  
scripting](#)**

[Introducing Windows Scripting](#)  
[Windows Script Host Architecture](#)  
[Windows PowerShell Architecture](#)  
[Summary](#)

## [Chapter 2: VBScript Essentials](#)

[Working with Variables](#)  
[Working with Constants](#)  
[Working with Arrays](#)  
[VBScript Operators](#)  
[Conditional Statements](#)  
[Control Loops](#)  
[Using Procedures](#)  
[Summary](#)

## [Chapter 3: JScript Essentials](#)

[Variables and Data Types](#)  
[Using Strings](#)  
[Using Comments](#)  
[Using Arrays](#)  
[JScript Operators](#)  
[Conditional Statements](#)  
[Control Flow with Looping](#)  
[Using Functions](#)  
[Summary](#)

## [Chapter 4: PowerShell Fundamentals](#)

[Shell Fundamentals](#)  
[PowerShell Aliases](#)

[Cmdlets, Snap-ins, and Providers](#)  
[Functions and Filters](#)  
[Objects and Types and the PowerShell Pipe](#)  
[Exploring PowerShell Variables](#)  
[Richer Types and .NET Objects](#)  
[Arrays](#)  
[The PowerShell Pipe](#)  
[Looping in PowerShell](#)  
[Conditions](#)  
[Scripts, Script Blocks, and Functions](#)  
[Scripts and Security](#)  
[Summary](#)

## [Part II: Windows VBScript and JScript](#)

### [Chapter 5: Creating Scripts and Scripting Files](#)

[Running Scripts](#)  
[Creating Batch Scripts](#)  
[Summary](#)

### [Chapter 6: VBScript and JScript Scripting Basics](#)

[Key WSH Objects](#)  
[Displaying Text Strings](#)  
[Examining Script Information](#)  
[Working with Environment Variables](#)

[Running Programs from Within Scripts](#)  
[Running Scripts Remotely](#)  
[Combining JScript and VBScript](#)  
[Summary](#)

## [Chapter 7: Input, Output, and Error Handling with VBScript and JScript](#)

[Input and Output Essentials](#)  
[Using Input Boxes](#)  
[Using Message Boxes](#)  
[Error Detection and Handling](#)  
[Summary](#)

## [Chapter 8: Working with Files and Folders in VBScript and JScript](#)

[Understanding the FileSystemObject](#)  
[Working with Folders](#)  
[Using Special Folders](#)  
[Working with Files](#)  
[Summary](#)

## [Chapter 9: Reading and Writing Files](#)

[Opening Files](#)  
[Reading Text Files](#)  
[Skipping Lines in a File](#)  
[Writing to a File](#)  
[Summary](#)

## **Chapter 10: Managing Drives and Printers with VBScript and JScript**

**Managing Drives**

**Obtaining Drive Information**

**Mapping Network Drives**

**Managing Network Printers**

**Summary**

## **Chapter 11: Configuring Menus, Shortcuts, and Startup Applications**

**Working with Menus, Desktops, and Startup Applications**

**Creating Shortcuts and Menu Options**

**Managing Shortcuts and Menus**

**Adding and Removing Startup Applications**

**Summary**

## **Chapter 12: Working with the Windows Registry and Event Logs**

**Working with the Windows Registry**

**Using Event Logs**

**Writing to Event Logs**

**Reading Event Logs**

**Generating Event Log Reports**

**Summary**

## **Part III: Network and Directory Service Scripting**

## **Chapter 13: Scheduling One-time and Recurring Tasks**

**Scheduling Local and Remote Jobs**

**Using the Graphical Task Scheduler**

**Scheduling Jobs with AT**

**Scheduling with Scripts**

**Summary**

## **Chapter 14: Managing Computer and User Scripts**

**Why Use Computer and User Scripts?**

**Introducing Group Policies**

**Working with Computer and User Scripts**

**Summary**

## **Chapter 15: Introducing Active Directory Services Interfaces**

**ADSI Essentials**

**Taking Advantage of ADSI**

**ADSI Provider Basics**

**Summary**

## **Chapter 16: Using Schema to Master ADSI**

**Exploring ADSI Schema**

**Working with Schema Class Objects**

**Viewing Property Syntax, Ranges, and Values**

*Summary*

***Chapter 17: Managing Local and Domain Resources with ADSI***

*Managing Domain Account Policies*

*Working with Local Computer Properties*

*Creating and Modifying User Accounts*

*Creating and Modifying Group Accounts*

*Summary*

***Chapter 18: Service and Resource Administration with ADSI***

*Managing Windows Services*

*Checking Service Status and Dependencies*

*Viewing and Setting Service Information*

*Starting, Stopping, and Pausing Services*

*Managing Open Resources and User Sessions*

*Summary*

***Chapter 19: Maintaining Shared Directories, Printer Queues, and Print Jobs***

*Working with Shared Folders*

*Managing Print Queues*

*Controlling Print Jobs*

*Summary*

## **Chapter 20: Managing Active Directory Domain Extensions**

**Working with Naming Contexts and the RootDSE Object**

**Accessing Active Directory Schema**

**Managing Computer Objects with LDAP**

**Managing Contacts with LDAP**

**Managing Groups with LDAP**

**Working with Organizational Units**

**Managing User Accounts with LDAP**

**Summary**

## **Part IV: Windows PowerShell**

### **Chapter 21: Input, Output, and Error Handling in PowerShell**

**Output to the Console**

**A Little Diversion into Strings**

**Implicit and Explicit Output**

**Verbose and Debug Output**

**Managing Different Outputs from Cmdlets**

**More on Error Output**

**Session Transcripts**

**Tracking Progress**

**Taking More Control of Formatting**

**Sorting and Selecting Fields**

**Changing How PowerShell Formats Objects**

**Creating Custom Objects on Demand**

[Techniques for Switching in Output](#)  
[Additional Output Cmdlets](#)  
[Outputting in Specific File Formats](#)  
[Every Export Has a Corresponding Import](#)  
[More on Selecting Text](#)  
[User Input](#)  
[Summary](#)

## [Chapter 22: Working with Files and the Registry in PowerShell](#)

[Using PSDrives, Accessing the File System, Mapping Drives](#)  
[Summary](#)

## [Chapter 23: Event Logging, Services, and Process Monitoring with PowerShell](#)

[Working with Services](#)  
[Starting, Stopping, Suspending, Resuming, and Restarting Services](#)  
[Working with Processes](#)  
[Working with Event Logs](#)

## ***About the Authors***

**William R. Stanek** (<http://www.williamstanek.com/>) has over 20 years of hands-on experience with advanced programming and development. He is a leading technology expert, an award-winning author, and a pretty-darn-good instructional trainer. Over the years, his practical advice has helped millions of technical professionals all over the world. He has written more than 75 books, including *Microsoft Exchange Server 2007 Administrator's Pocket Consultant*, *Microsoft Windows Vista Administrator's Pocket Consultant*, *Microsoft Windows Server 2008 Administrator's Pocket Consultant*, and *Windows Server 2008 Inside Out*.

Mr. Stanek has been involved in the commercial Internet community since 1991. His core business and technology experience comes from over 11 years of military service. He has substantial experience in developing server technology, encryption, and Internet solutions. He has written many technical white papers and training courses on a wide variety of topics. He frequently serves as a subject matter expert and consultant.

Mr. Stanek has an MS with distinction in information systems and a BS magna cum laude in computer science. He is proud to have served in the Persian Gulf War as a combat crewmember on an electronic warfare aircraft. He flew on numerous combat missions into Iraq and was awarded nine medals for his wartime service, including one of the United States of America's highest flying honors, the Air Force Distinguished Flying Cross. Currently, he resides in the Pacific Northwest with his wife and children.

**James O'Neill** was born in 1965, used his first Microsoft product at the age of 13, and has scarcely stopped since. He describes himself as a compulsive explainer, which led him to work as a technical trainer and run a small training

company in the 1990s. He joined Microsoft Consulting Services in 2000, and after six years there working with a wide variety of clients he moved back to a role where he can explain more, becoming an evangelist, talking to IT professionals primarily about Windows platform technologies. He is a veteran of every Microsoft operating system and network technology since DOS 3.1 MS-Net and Windows 1.03, and has used a dozen or so programming and scripting languages. Over the last two years, he has become increasingly evangelical about PowerShell, using it to write libraries that support Windows 2008 virtualization and Office Communications Server. He lives near Oxford, England with his wife and two children, and occasionally manages to find time for photography and scuba diving. He has a worrying tendency to write about himself in the third person.

**Jeffrey Rosen** has a Masters of Business Administration from Case Western Reserve, Weatherhead School of Management, specializing in Information Systems. He is a Microsoft Certified Architect, an MCSE specializing in messaging and security, and a CISSP. He began his career working with Microsoft Mail and Novell Netware. Since then, Jeffrey has worked for Microsoft Consulting Services for nine years on large and complex Exchange deployments. He is a co-author of *Professional PowerShell for Exchange 2007 SP1*.

## ***About the Technical Editor***

**Andrew Edney** has been an IT professional for more than 12 years and has, over the course of his career, worked for a range of high-tech companies, such as Microsoft, Hewlett-Packard, and Fujitsu Services. He has a wide range of experience in virtually all aspects of Microsoft's computing solutions, having designed and architected large enterprise solutions for government and private-sector customers. Over the years, Andrew has made a number of guest appearances at major industry events, presenting on a wide range of information systems subjects, such as an appearance at the annual Microsoft Exchange Conference in Nice where he addressed the Microsoft technical community on mobility computing. Andrew is currently involved in numerous Microsoft beta programs, including next-generation Windows operating systems and next-generation Microsoft Office products. He actively participates in all Windows Media Center beta programs and was heavily involved in the Windows Home Server beta program. In addition, Andrew has written a number of books including: *Windows Home Server User's Guide* (2007), *Pro LCS: Live Communications Server Administration* (2007), *Getting More from Your Microsoft Xbox 360* (2006), *How to Set Up Your Home or Small Business Network* (2006), *Using Microsoft Windows XP Media Center 2005* (2006), *Windows Vista: An Ultimate Guide* (2007), *PowerPoint 2007 in Easy Steps* (2007), *Windows Vista Media Center in Easy Steps* (2007), and *Using Ubuntu Linux* (2007).

# ***Acknowledgments***

Writing *PowerShell, VBScript, and JScript Bible* took a lot of work and research. Much of the time was spent searching for undocumented features, resolving problems with poorly documented interfaces, and exploring uncharted areas of Windows. Then, I had to write about the hidden features and the many interfaces I had discovered. I hope you'll agree that the result was worth all of the effort. The book contains over 300 code examples and dozens of working scripts, all designed to provide a top-notch tutorial and reference.

*PowerShell, VBScript, and JScript Bible* wouldn't have been possible without a lot of help from others and, especially, the team at Wiley: Katie Mohr, the Acquisitions Editor, and Ed Connor, the Development Editor.

A big thank you goes out to my close contacts and friends at Microsoft. Thanks also to Studio B literary agency and my agents, David Rogelberg and Neil Salkind. Neil has a terrific knack for helping me find projects that are both fun and challenging.

I hope I haven't forgotten anyone, but if I have, it was an oversight. *Honest. ;-)*

*William R. Stanek*

There are a few people without whom I wouldn't have been able to contribute to this book. Neil Salkind at Studio B who asked is perhaps first in the queue to be thanked. Richard Siddaway, who started the first PowerShell user group, is probably the person most responsible for the depth of my interest in the subject. At Microsoft, I should mention Jeffrey Snover for his encouragement and Eileen Brown, my manager but also my friend, mentor, and when I least deserve it, my advocate. She deserves far greater thanks than a mention here. And finally, my family: my wife, Jackie,

and my children, Lisa and Paul. Kids: the book in your hands is one of the reasons why Daddy kept asking you to be quiet.

*James O'Neill*

To my wife, Christine, and our daughters, Madison and Isabel, I love you, and thanks for always being there for me. Also, thanks to the authors, editors, and other invaluable staff that I've had the pleasure of working with.

*Jeffrey Rosen*

If you've purchased *PowerShell, VBScript, and JScript Bible* or are thumbing through the book in a bookstore somewhere, you probably want to know how this book can help you. Our goal in writing *PowerShell, VBScript, and JScript Bible* is to create the best resource available on scripting the Windows operating system.

As you'll learn in this book, Windows scripting involves many different technologies. These technologies include:

- Windows operating systems
- Windows Script Host (WSH)
- Scripting languages, such as VBScript and JScript
- Windows PowerShell
- ActiveX and COM (Component Object Model) components
- Microsoft Active Directory
- ADSI (Active Directory Services Interfaces)
- WMI (Windows Management Instrumentation)

We've tried to pack in as much information about these topics as possible, and to present the information in a way that is both clear and concise. We've also tried to present Windows scripting in a unique way, offering both VBScript and JScript solutions throughout the text and then discussing how to accomplish similar tasks using PowerShell. In this way, you can learn exactly how VBScript, JScript, and PowerShell can be used with Windows. With this

approach, you gain insight into unique scripting techniques necessary to implement solutions in VBScript, JScript, and PowerShell, and, if you prefer one technique over the other, there's no more guesswork.

# ***Introduction***

*PowerShell, VBScript, and JScript Bible* is a work in progress, just like the Windows operating system itself and the body of work that's grown up around it. It is quite likely that errors will make themselves apparent after this book has gone to press and found its way onto your desktop. I very much appreciate the efforts of readers who go to the trouble of pointing out mistakes in the text so I can fix them in future editions. Even more, I am grateful for readers who offer their own hints, tricks, code, and ideas to me for inclusion in future editions of this book.

I truly hope you find that *PowerShell, VBScript and JScript Bible* provides everything you need to perform essential scripting tasks. You can contact me through e-mail at [williamstanek@aol.com](mailto:williamstanek@aol.com). You're always welcome to write me with ideas, suggestions, improvements, or questions. If you provide an example that's used in a future edition of this book, I'll be especially grateful for your help and will credit you in that edition. I also have a Web site, which contains support material for this book, among other things. Point your browser to [www.williamstanek.com/scripting/](http://www.williamstanek.com/scripting/) for corrections, enhancements, news, and additional thoughts. I'll post the source code from this book as well.

Thank you!

## ***William R. Stanek***

The best introduction to a book I ever saw was from Machiavelli's *The Discourses*, where he says something like, "I'm sending you something, and if it doesn't meet the obligations I owe you, is at any rate the best I can send. For in it I have set down all I know from long experience and constant reading...you may perhaps lament my lack of skill

should my narratives be thin and also errors of judgment if I have made mistakes.”

The longer the piece that I write, the more likely I am to think of that. The experience I have in PowerShell builds on decades of seeing different scenarios and using different tools: and that experience has been gained working with people who don't think of themselves as Programmers. Graphical management tools make it easy to find how to do a one-off task, but some repetitive tasks aren't efficient with the GUI. Some information can't be extracted easily from a graphical tool: some tasks just weren't anticipated by the Programmer who wrote it. UNIX system administrators have known for a long time that there is an area, which isn't Programming in the customary sense, of creating a large beast, with considerations such as user interface design to be taken into account. It produces something that a dictionary would define as a program—a sequence of instructions to be followed by the computer. A script is a program but not a Program (the capitalization is deliberate). Scripts are written mostly by people who are not Programmers, but just know the job they need to get done. And, usually a script will involve less time to create than a “proper” Program and will pay back the time that went into it very quickly. Want to know which of the servers you manage don't have a key patch on them—without logging onto each one? It's a few lines of script; a system administrator can put it together in a couple of minutes. A Programmer (capital P) won't have fired up Visual Studio and roughed out the user interface in that time.

Better still for the Windows system administrator, most of the work has been done by someone else. Want a list of your servers? A couple of lines of script will get it from Active Directory. Want the installed patches on each of those servers? One line of PowerShell will get that. Most of the knowledge needed isn't of a programming or scripting

language—whether you use PowerShell, VBScript, or any other environment, it is a question of understanding the task and the objects that you can call on *from* that environment. PowerShell has all of .NET, WMI, AD, and ActiveX/COM at its disposal. It needs a whole bookshelf to explain all of those things, so what we do in this book is to try to equip you, the reader, with the skills you need to use them—which is why I worry that my narratives may be thin.

## Who Should Read This Book

If you are someone who is interested in any of the previously mentioned technologies, *PowerShell, VBScript and JScript Bible* is definitely a book you should read. This comes with several caveats. This book is designed for:

- Administrators who support Windows systems
- Developers who create scripts or programs for Windows systems
- Advanced users working with Windows systems

To pack in as much information as possible, We had to assume that you have basic networking skills, a basic understanding of Windows, and that Windows is already installed on your systems. With this in mind, we don't devote entire chapters to understanding, installing, or using Windows. Beyond the introductory information in Chapters 1, 2, and 3, we don't cover scripting basics either. We do, however, cover every facet of Windows scripting, so if you want to learn Windows scripting inside and out—including techniques not published elsewhere—you've come to the right source.

Although the book highlights the latest and greatest features of Windows Vista and Windows Server 2008, just about everything you learn in this book can also be applied to script Windows XP. Keep in mind that if you are using a

pre-Windows Vista system, however, you may need to check your scripts to ensure they are fully compatible.

## **How This Book Is Organized**

Learn the basics of what goes into Windows and you will be able to use all sorts of devices and computers in the future. The book is organized in a way that enables you to start off at the very beginning with Windows, but still grow to the point where you can get going with some powerful server and programming features, if you care to.

Part I assumes that someone has set up a Windows system in front of you. After being introduced to Windows script in Chapter 1, you learn the basics of how to:

- VBScript Essentials (Chapter 2)
- JScript Essentials (Chapter 3)
- PowerShell Essentials (Chapter 4)

In Part II, you learn how to:

- Creating Scripts and Scripting Files (Chapter 5)
- VBScript and JScript Scripting Basics (Chapter 6)
- Input, Output, and Error Handling with VBScript and JScript (Chapter 7)
- Working with Files and Folders in VBscript and JScript (Chapter 8)
- Reading and Writing Files (Chapter 9)
- Managing Drives and Printers with VBScript and JScript (Chapter 10)
- Configuring Menus, Shortcuts, and Startup Applications (Chapter 11)
- Working with the Windows Registry and Event Logs (Chapter 12)

In Part III, you learn network and directory service scripting:

- Scheduling One-time and Recurring Tasks (Chapter 13)
