This book is dedicated to Joan Pallix, a pioneer in our field. Joan's ingenuity brought many of us together to develop early demonstrations of system health management technologies for the Space Shuttle Thermal Protection System, and her trailblazing approach provided a key foundation of the System Health Management process that we describe herein. Her dedication, originality, and technical expertise earned the respect of the System Health Management community.

# Contents

<b>About the Editors</b>	<b>xxiii</b>
<b>List of Contributors</b>	<b>xxv</b>
<b>Foreword</b>	<b>xxix</b>
<b>Preface</b>	<b>xxxiii</b>
<b>Part One THE SOCIO-TECHNICAL CONTEXT OF SYSTEM HEALTH MANAGEMENT</b>	
<i>Charles D. Mott</i>	
<b>1 The Theory of System Health Management</b>	<b>3</b>
<i>Stephen B. Johnson</i>	
Overview	3
1.1 Introduction	3
1.2 Functions, Off-Nominal States, and Causation	7
1.3 Complexity and Knowledge Limitations	10
1.4 SHM Mitigation Strategies	11
1.5 Operational Fault Management Functions	12
1.5.1 <i>Detection Functions and Model Adjustment</i>	14
1.5.2 <i>Fault Diagnosis</i>	16
1.5.3 <i>Failure Prognosis</i>	17
1.5.4 <i>Failure Response Determination</i>	17
1.5.5 <i>Failure Response</i>	17
1.5.6 <i>Fault and Failure Containment</i>	19
1.6 Mechanisms	19
1.6.1 <i>Fault Tolerance</i>	19
1.6.2 <i>Redundancy</i>	20
1.7 Summary of Principles	22
1.8 SHM Implementation	23
1.9 Some Implications	24
1.9.1 <i>Detecting Unpredicted Off-nominal States</i>	24
1.9.2 <i>Impossibility of Complete Knowledge Independence</i>	24
1.9.3 <i>The Need for, and Danger of, Bureaucracy</i>	25
1.9.4 <i>“Clean” Interfaces</i>	25
1.9.5 <i>Requirements, Models, and Islands of Rigor</i>	26
1.10 Conclusion	26
Bibliography	26

<b>2</b>	<b>Multimodal Communication</b>	<b>29</b>
	<i>Beverly A. Sauer</i>	
	Overview	29
2.1	Multimodal Communication in SHM	31
2.2	Communication Channels	34
2.3	Learning from Disaster	36
2.4	Current Communication in the Aerospace Industry	37
2.5	The Problem of Sense-making in SHM Communication	37
2.6	The Costs of Faulty Communication	38
2.7	Implications	39
2.8	Conclusion	41
	Acknowledgments	43
	Bibliography	43
<b>3</b>	<b>Highly Reliable Organizations</b>	<b>49</b>
	<i>Andrew Wiedlea</i>	
	Overview	49
3.1	The Study of HROs and Design for Dependability	49
3.2	Lessons from the Field: HRO Patterns of Behavior	52
	3.2.1 <i>Inseparability of Systemic Equipment and Anthropologic Hazards</i>	53
	3.2.2 <i>Dynamic Management of System Risks</i>	54
	3.2.3 <i>Social Perceptions of Benefits and Hazards</i>	56
3.3	Dependable Design, Organizational Behavior, and Connections to the HRO Project	57
3.4	Conclusion	60
	Bibliography	61
<b>4</b>	<b>Knowledge Management</b>	<b>65</b>
	<i>Edward W. Rogers</i>	
	Overview	65
4.1	Systems as Embedded Knowledge	66
4.2	KM and Information Technology	66
4.3	Reliability and Sustainability of Organizational Systems	67
4.4	Case Study of Building a Learning Organization: Goddard Space Flight Center	69
	4.4.1 <i>Practice 1: Pause and Learn (PaL)</i>	69
	4.4.2 <i>Practice 2: Knowledge Sharing Workshops</i>	71
	4.4.3 <i>Practice 3: Case Studies</i>	72
	4.4.4 <i>Practice 4: Review Processes and Common Lessons Learned</i>	73
	4.4.5 <i>Practice 5: Goddard Design Rules</i>	73
	4.4.6 <i>Practice 6: Case-Based Management Training</i>	74
4.5	Conclusion	75
	Bibliography	75
<b>5</b>	<b>The Business Case for SHM</b>	<b>77</b>
	<i>Kirby Keller and James Poblete</i>	
	Overview	77
5.1	Business Case Processes and Tools	78
5.2	Metrics to Support the Decision Process	80
	5.2.1 <i>Availability</i>	81
	5.2.2 <i>Schedule Reliability</i>	81
	5.2.3 <i>Maintenance Resource Utilization</i>	81

5.2.4	<i>ROI</i>	81
5.2.5	<i>NPV</i>	82
5.2.6	<i>Cash Flow</i>	82
5.3	Factors to Consider in Developing an Enterprise Model	82
5.3.1	<i>Operational Model</i>	83
5.3.2	<i>Financial Analysis</i>	85
5.4	Evaluation of Alternatives	86
5.5	Modifications in Selected Baseline Model	86
5.5.1	<i>Additions and Changes in Technology on Fleet Platforms</i>	86
5.5.2	<i>Additions and Changes in Technology in Support Operations</i>	87
5.5.3	<i>Changes in Policies and Procedures</i>	87
5.6	Modeling Risk and Uncertainty	87
5.7	Model Verification and Validation	88
5.8	Evaluation Results	88
5.9	Conclusion	90
	Bibliography	91

## Part Two SHM AND THE SYSTEM LIFECYCLE

*Seth S. Kessler*

<b>6</b>	<b>Health Management Systems Engineering and Integration</b>	<b>95</b>
	<i>Timothy J. Wilmering and Charles D. Mott</i>	
	Overview	95
6.1	Introduction	95
6.2	Systems Thinking	96
6.3	Knowledge Management	97
6.4	Systems Engineering	98
6.5	Systems Engineering Lifecycle Stages	99
6.6	Systems Engineering, Dependability, and Health Management	100
6.7	SHM Lifecycle Stages	103
6.7.1	<i>Research Stage</i>	103
6.7.2	<i>Requirements Development Stage</i>	104
6.7.3	<i>System/Functional Analysis</i>	105
6.7.4	<i>Design Synthesis and Integration</i>	106
6.7.5	<i>System Test and Evaluation</i>	107
6.7.6	<i>HM System Maturation</i>	109
6.8	SHM Analysis Models and Tools	110
6.8.1	<i>Safety Models</i>	110
6.8.2	<i>Reliability Models</i>	111
6.8.3	<i>Diagnostic Models</i>	112
6.9	Conclusion	112
	Acknowledgments	112
	Bibliography	112
<b>7</b>	<b>Architecture</b>	<b>115</b>
	<i>Ryan W. Deal and Seth S. Kessler</i>	
	Overview	115
7.1	Introduction	115

7.2	SHM System Architecture Components	117
	7.2.1 <i>Power Consumption</i>	117
	7.2.2 <i>Data Communications</i>	118
7.3	Examples of Power and Data Considerations	119
7.4	SHM System Architecture Characteristics	120
	7.4.1 <i>Processing</i>	120
	7.4.2 <i>Operational Duration</i>	121
	7.4.3 <i>Fault Tolerance and Failure Management</i>	121
	7.4.4 <i>Reliability</i>	122
	7.4.5 <i>Asset Availability</i>	123
	7.4.6 <i>Compatibility</i>	123
	7.4.7 <i>Maintainability</i>	124
	7.4.8 <i>Extensibility</i>	125
	7.4.9 <i>Centralized versus Distributed SHM</i>	125
7.5	SHM System Architecture Advanced Concepts	126
	7.5.1 <i>Systems-of-Systems</i>	126
	7.5.2 <i>Network-centric Operations</i>	126
7.6	Conclusion	126
	Bibliography	127
<b>8</b>	<b>System Design and Analysis Methods</b>	<b>129</b>
	<i>Irem Y. Tumer</i>	
	Overview	129
8.1	Introduction	129
8.2	Lifecycle Considerations	130
8.3	Design Methods and Practices for Effective SHM	132
	8.3.1 <i>Reliability Analysis Methods</i>	132
	8.3.2 <i>Formal Design Methods</i>	133
	8.3.3 <i>Function-Based Design Methods</i>	134
	8.3.4 <i>Function-Based Failure and Risk Analysis Methods</i>	135
	8.3.5 <i>Design for Testability Methods</i>	137
	8.3.6 <i>System Analysis and Optimization Methods</i>	137
8.4	Conclusion	141
	Acknowledgments	142
	Bibliography	142
<b>9</b>	<b>Assessing and Maturing Technology Readiness Levels</b>	<b>145</b>
	<i>Ryan M. Mackey</i>	
	Overview	145
9.1	Introduction	145
9.2	Motivating Maturity Assessment	146
9.3	Review of Technology Readiness Levels	147
9.4	Special Needs of SHM	149
9.5	Mitigation Approaches	151
9.6	TRLs for SHM	153
9.7	A Sample Maturation Effort	154
9.8	Conclusion	156
	Bibliography	157

<b>10</b>	<b>Verification and Validation</b>	<b>159</b>
	<i>Lawrence Z. Markosian, Martin S. Feather and David E. Brinza</i>	
	Overview	159
10.1	Introduction	159
10.2	Existing Software V&V	160
	10.2.1 Avionics V&V	160
	10.2.2 NASA Requirements, Policies, Standards, and Procedures Relevant to Software	162
	10.2.3 V&V for Spacecraft Fault Protection	163
	10.2.4 Example of Industry V&V Current Practice: Space Shuttle Main Engine Controller	164
10.3	Feasibility and Sufficiency of Existing Software V&V Practices for SHM	165
	10.3.1 Feasibility	165
	10.3.2 Sufficiency	166
10.4	Opportunities for Emerging V&V Techniques Suited to SHM	167
	10.4.1 SHM Architecture	168
	10.4.2 Models Used in SHM	168
	10.4.3 Planning Systems in SHM	169
	10.4.4 SHM of Software Systems	169
10.5	V&V Considerations for SHM Sensors and Avionics	170
	10.5.1 Flight Hardware V&V	170
	10.5.2 Sensor Data V&V	170
10.6	V&V Planning for a Specific SHM Application	171
	10.6.1 Application Description	173
	10.6.2 Data-Driven Anomaly Detection Using IMS	173
	10.6.3 Model-Based Fault Diagnosis Using TEAMS	177
	10.6.4 Rule-Driven Failure Recovery Using SHINE	178
10.7	A Systems Engineering Perspective on V&V of SHM	180
10.8	Conclusion	181
	Acknowledgments	181

### Part Three ANALYTICAL METHODS

*Ann Patterson-Hine*

<b>12</b>	<b>Physics of Failure</b>	<b>199</b>
	<i>Kumar V. Jata and Triplicane A. Parthasarathy</i>	
	Overview	199
12.1	Introduction	200
12.2	Physics of Failure of Metals	201
	12.2.1 <i>High-Level Classification</i>	201
	12.2.2 <i>Second-Level Classification</i>	203
12.3	Physics of Failure of CMCs	212
	12.3.1 <i>Fracture</i>	214
	12.3.2 <i>Material Loss</i>	215
12.4	Conclusion	216
	Bibliography	216
<b>13</b>	<b>Failure Assessment</b>	<b>219</b>
	<i>Robyn Lutz and Allen Nikora</i>	
	Overview	219
13.1	Introduction	219
13.2	FMEA	220
13.3	SFMEA	221
13.4	FTA	222
13.5	SFTA	222
13.6	BDSA	223
13.7	Safety Analysis	225
13.8	Software Reliability Engineering	225
13.9	Tools and Automation	228
13.10	Future Directions	229
13.11	Conclusion	229
	Acknowledgments	230
	Bibliography	230
<b>14</b>	<b>Reliability</b>	<b>233</b>
	<i>William Q. Meeker and Luis A. Escobar</i>	
	Overview	233
14.1	Time-to-Failure Model Concepts and Two Useful Distributions	233
	14.1.1 <i>Other Quantities of Interest in Reliability Analysis</i>	234
	14.1.2 <i>Important Probability Distributions</i>	234
14.2	Introduction to System Reliability	236
	14.2.1 <i>System Reliability Concepts</i>	236
	14.2.2 <i>Metrics for System Reliability</i>	236
	14.2.3 <i>Time Dependency of System Reliability</i>	237
	14.2.4 <i>Systems with Simple Structures</i>	237
	14.2.5 <i>Importance of Part Count in Product Design</i>	238
14.3	Analysis of Censored Life Data	239
	14.3.1 <i>Analysis of Multiply Right-Censored Data</i>	239
	14.3.2 <i>Probability Plotting</i>	239
	14.3.3 <i>Maximum Likelihood Estimation</i>	241
	14.3.4 <i>Extensions to Data with Other Types of Censoring and Truncation</i>	243

---

14.4	Accelerated Life Testing	243
14.5	Analysis of Degradation Data	244
	14.5.1 <i>A Simple Method of Degradation Data Analysis</i>	245
	14.5.2 <i>Comments on the Approximate Degradation Analysis</i>	245
14.6	Analysis of Recurrence Data	246
	14.6.1 <i>Mean Cumulative Function and Recurrence Rate</i>	247
	14.6.2 <i>Non-parametric Estimation of the MCF</i>	248
14.7	Software for Statistical Analysis of Reliability Data	249
	Acknowledgments	250

17.3	Prognosis RUL Probability Density Function	287
17.4	Adaptive Prognosis	287
17.5	Performance Metrics	289
	17.5.1 <i>Accuracy</i>	289
	17.5.2 <i>Precision</i>	290
	17.5.3 <i>Convergence</i>	291
17.6	Distributed Prognosis System Architecture	292
17.7	Conclusion	292
	Bibliography	293

## Part Four OPERATIONS

*Karl M. Reichard*

<b>18</b>	<b>Quality Assurance</b>	<b>299</b>
	<i>Brian K. Hughitt</i>	
	Overview	299
18.1	NASA QA Policy Requirements	300
18.2	Quality System Criteria	302
18.3	Quality Clauses	303
18.4	Workmanship Standards	304
18.5	Government Contract Quality Assurance	304
18.6	Government Mandatory Inspection Points	305
18.7	Quality System Audit	306
18.8	Conclusion	307
	Bibliography	308
<b>19</b>	<b>Maintainability: Theory and Practice</b>	<b>309</b>
	<i>Gary O'Neill</i>	
	Overview	309
19.1	Definitions of Reliability and Maintainability	310
19.2	Reliability and Maintainability Engineering	311
19.3	The Practice of Maintainability	314
19.4	Improving R&M Measures	315
19.5	Conclusion	316
	Bibliography	317
<b>20</b>	<b>Human Factors</b>	<b>319</b>
	<i>Robert S. McCann and Lilly Spirkovska</i>	
	Overview	319
20.1	Background	320
20.2	Fault Management on Next-Generation Spacecraft	323
20.3	Integrated Fault Management Automation Today	325

---

20.4	Human–Automation Teaming for Real-Time FM	328
20.4.1	<i>Human–Machine Functional Allocation</i>	328
20.4.2	<i>Ensuring Crew Visibility in Automated Activities</i>	328
20.4.3	<i>Providing Crew Insight on System Summary Displays</i>	329
20.5	Operations Concepts for Crew–Automation Teaming	330
20.6	Empirical Testing and Evaluation	333
20.7	Future Steps	334
20.8	Conclusion	336
	Bibliography	336
<b>21</b>	<b>Launch Operations</b>	<b>339</b>
	<i>Robert D. Waterman, Patricia E. Nicoli, Alan J. Zide, Susan J. Waterman, Jose M. Perotti, Robert A. Ferrell and Barbara L. Brown</i>	
	Overview	339
21.1	Introduction to Launch Site Operations	339
21.2	Human-Centered Health Management	340
21.2.1	<i>Space Shuttle Turnaround Operations</i>	340
21.2.2	<i>International Space Station (ISS) Element Integrated Testing</i>	342
21.2.3	<i>Launch Pad Operations</i>	344
21.2.4	<i>Launch Countdown</i>	344
21.2.5	<i>Expendable Launch Vehicle Processing</i>	345
21.3	SHM	346
21.3.1	<i>Sensing</i>	346
21.3.2	<i>Integrated Data Environment</i>	346
21.3.3	<i>Configuration Data Automation</i>	347
21.4	LS Abort and Emergency Egress	347
21.5	Future Trends Post Space Shuttle	348
21.6	Conclusion	349
	Bibliography	349
<b>22</b>	<b>Fault Management Techniques in Human Spaceflight Operations</b>	<b>351</b>
	<i>Brian O’Hagan and Alan Crocker</i>	
	Overview	351
22.1	The Flight Operations Team	352
22.2	System Architecture Implications	353
22.3	Operations Products, Processes and Techniques	358
22.4	Lessons Learned from Space Shuttle and ISS Experience	364
22.5	Conclusion	366
	Bibliography	367
<b>23</b>	<b>Military Logistics</b>	<b>369</b>
	<i>Eddie C. Crow and Karl M. Reichard</i>	
	Overview	369
23.1	Focused Logistics	371
23.2	USMC AL	373
23.3	Benefits and Impact of SHM on Military Operations and Logistics	378
23.4	Demonstrating the Value of SHM in Military Operations and Logistics	381
23.5	Conclusion	385
	Bibliography	386

# About the Editors

**Stephen B. Johnson** has been active in the field of system health management since the mid-1980s. His experience includes the development of fault protection algorithms for deep-space probes, research into SHM processes within systems engineering, the development of SHM theory, the psychological, communicative, and social aspects of system failure, and the application of directed graph methods for assessment of testability, failure effect propagation timing, and diagnostic systems. He is the author of *The Secret of Apollo: Systems Management in American and European Space Programs* (2002) and *The United States Air Force and the Culture of Innovation 1945–1965* (2002), the general editor of *Space Exploration and Humanity: A Historical Encyclopedia* (2010), and has written many articles on SHM and space history. He has a BA in Physics from Whitman College and PhD in the History of Science and Technology from the University of Minnesota. He currently is an associate research professor at the University of Colorado at Colorado Springs, and a health management systems engineer at NASA Marshall Space Flight Center.

**Thomas J. Gormley** has been involved in the aerospace industry for 24 years and brings a systems engineering and implementation perspective to this SHM textbook. He was the Integrated Vehicle Health Management Project leader for Rockwell Space Systems during the early 1990s and was the developer of the Propulsion Checkout and Control System that was successfully demonstrated on the next generation reusable launch system testbed. Mr. Gormley transferred to Lockheed-Martin Telecommunication Systems where he focused his efforts on fault protection systems for commercial telecommunications. In 2000 he formed Gormley & Associates and has been a consultant for NASA on several SHM projects. He is presently supporting NASA's Constellation Program Information Systems Office and is applying his systems engineering and health management expertise to NASA's Space Exploration Program. Mr. Gormley has published several technical papers on SHM and is a member of the American Institute of Aeronautics and Astronautics.

**Seth S. Kessler** is the president and CEO of the Metis Design Corporation, a small consulting firm that has specialized in structural health monitoring technologies for a decade. He has experience from managing more than three-dozen government-funded BAA, SBIR, and STTR contracts. His research interests have included distributed sensor network architectures, analytical modeling of guided waves, diagnostic algorithms for composite materials, and carbon nanotube (CNT) based multifunctional structures. In 1998 he received his SB in aerospace engineering at the Massachusetts Institute of Technology (MIT) studying the effects of a cryogenic environment on composite materials. In 1999, he received his SM from that same department, creating and experimentally validating a design tool to analyze composite structures subjected to extreme inertial loading. Dr. Kessler completed his PhD from MIT in 2002, researching structural health monitoring piezoelectric-based techniques for damage detection in composite structures. He also was a post-doc in that department, modeling durability effects in composite laminates as part of the DARPA-funded, Boeing-led Accelerated Insertion of Materials Program. Dr. Kessler was a Draper Fellow working on the DARPA seedling WASP Program, and at the Lockheed Martin Skunk Works was an advanced concepts engineer on the X33/VentureStar

Program. In 1998, he received the Admiral Luis De Florez Award for Ingenuity and Creativity in Design, in 2001 was awarded the American Society for Composites PhD Research Scholarship, and was awarded Best Paper by ASC in 2002 and the PHM Society in 2009. Dr. Kessler has more than three-dozen technical publications and holds 10 patents in his areas of expertise.

**Charles D. Mott** brings expertise in the social and economic aspects of large-scale technological projects. He has experience in business process improvement, systems analysis and design, financial system design and implementation, and organizational management. He has worked at Bank One, Patriot Management Corporation, Don Breazeale and Associates, Dow Chemical, and NASA. He has a bachelor's degree in management information systems from Michigan Technological University and a masters in space studies from the University of North Dakota. He is a member of the Prognostics and Health Management Society.

**Ann Patterson-Hine**, PE, has worked at NASA Ames Research Center since 1988. She is the branch chief for Discovery and Systems Health in the Intelligent Systems Division. She has been the project leader for advanced technology demonstrations under the Next Generation Launch Technology Program and many of the program's predecessors including the Reusable Launch Vehicle and Space Launch Initiative Programs. She participated on the Shuttle Independent Assessment Team and Wire Integrity Pilot Study at Ames. She was Principal Investigator for NASA's Exploration Technology Development Program's Integrated Systems Health Management project. Her research has focused on the use of engineering models for model-based reasoning in advanced monitoring and diagnostic systems. She received a BS degree in mechanical engineering from The University of Alabama and a doctorate in mechanical engineering from The University of Texas at Austin, and is a member of the American Institute of Aeronautics and Astronautics and a senior member of the IEEE.

**Karl M. Reichard** is the a research associate at the Pennsylvania State University Applied Research Laboratory and assistant professor of acoustics. He is the head of the Applied Research Laboratory's Embedded Hardware/Software Systems and Applications Department and teaches and advises graduate students in The Pennsylvania State University Graduate Program in Acoustics and the Department of Electrical Engineering. He has over 25 years of experience in the design and implementation of signal processing, control, and embedded diagnostics/prognostics systems. He has developed unattended remote sensing, active control, and health monitoring systems for land- and sea-based platforms. He earned BS, MS, and PhD degrees in electrical engineering from Virginia Tech.

**Philip A. Scandura, Jr.** has over 25 years of experience in the system definition and implementation of real-time embedded systems, for use in safety-critical and mission-critical applications. Mr. Scandura joined Honeywell in 1984 where he is currently employed as a staff scientist in its Advanced Technology Organization. During his tenure at Honeywell, he has specified, designed, and tested avionics systems for use in commercial, regional, business, and commuter aircraft, as well as human-rated space vehicles. He served as system architect, contributing to the development of several integrated modular avionics (IMA) and integrated vehicle health management (IVHM) systems, including those used on the Boeing 777 aircraft family. Mr. Scandura served for eight years as a certified FAA Designated Engineering Representative (DER), specializing in the certification of critical systems and equipment for aircraft. He is the author of Chapter 22, "Vehicle Health Management Systems," in *The Avionics Handbook, Second Edition*, edited by Cary R. Spitzer (CRC Press, 2006), and has written many papers on vehicle health management concepts. Mr. Scandura holds a BS degree in electrical engineering from the University of Missouri–Rolla and a MBA in technical management from the University of Phoenix.
