Foreword

Preface

Part One: The Socio-technical Context of System Health Management

**Chapter 1: The Theory of System
Health Management**

Overview

1.1 Introduction

**1.2 Functions, Off-Nominal States, and
Causation**

1.3 Complexity and Knowledge Limitations

1.4 SHM Mitigation Strategies

1.5 Operational Fault Management Functions

1.6 Mechanisms

1.7 Summary of Principles

1.8 SHM Implementation

1.9 Some Implications

1.10 Conclusion

Bibliography

Chapter 2: Multimodal Communication

Overview

2.1 Multimodal Communication in SHM

2.2 Communication Channels

2.3 Learning from Disaster

2.4 Current Communication in the Aerospace Industry

2.5 The Problem of Sense-making in SHM Communication

2.6 The Costs of Faulty Communication

2.7 Implications

2.8 Conclusion

Acknowledgments

Bibliography

Chapter 3: Highly Reliable Organizations

Overview

3.1 The Study of HROs and Design for Dependability

3.2 Lessons from the Field: HRO Patterns of Behavior

3.3 Dependable Design, Organizational Behavior, and Connections to the HRO Project

3.4 Conclusion
Bibliography

Chapter 4: Knowledge Management

Overview

4.1 Systems as Embedded Knowledge

4.2 KM and Information Technology

4.3 Reliability and Sustainability of Organizational Systems

4.4 Case Study of Building a Learning Organization: Goddard Space Flight Center

4.5 Conclusion
Bibliography

Chapter 5: The Business Case for SHM

Overview

5.1 Business Case Processes and Tools

5.2 Metrics to Support the Decision Process

5.3 Factors to Consider in Developing an Enterprise Model

5.4 Evaluation of Alternatives

[5.5 Modifications in Selected Baseline Model](#)

[5.6 Modeling Risk and Uncertainty](#)

[5.7 Model Verification and Validation](#)

[5.8 Evaluation Results](#)

[5.9 Conclusion](#)

[Bibliography](#)

[Part Two: SHM and the System Lifecycle](#)

[Chapter 6: Health Management Systems Engineering and Integration](#)

[Overview](#)

[6.1 Introduction](#)

[6.2 Systems Thinking](#)

[6.3 Knowledge Management](#)

[6.4 Systems Engineering](#)

[6.5 Systems Engineering Lifecycle Stages](#)

[6.6 Systems Engineering, Dependability, and Health Management](#)

[6.7 SHM Lifecycle Stages](#)

[6.8 SHM Analysis Models and Tools](#)

[6.9 Conclusion](#)

[Acknowledgments](#)

[Bibliography](#)

[Chapter 7: Architecture](#)

Overview

7.1 Introduction

7.2 SHM System Architecture Components

7.3 Examples of Power and Data

Considerations

7.4 SHM System Architecture

Characteristics

7.5 SHM System Architecture Advanced

Concepts

7.6 Conclusion

Bibliography

Chapter 8: System Design and Analysis Methods

Overview

8.1 Introduction

8.2 Lifecycle Considerations

8.3 Design Methods and Practices for Effective SHM

8.4 Conclusion

Acknowledgments

Bibliography

Chapter 9: Assessing and Maturing Technology Readiness Levels

Overview

9.1 Introduction

9.2 Motivating Maturity Assessment

9.3 Review of Technology Readiness Levels

9.4 Special Needs of SHM
9.5 Mitigation Approaches
9.6 TRLs for SHM
9.7 A Sample Maturation Effort
9.8 Conclusion
Bibliography

Chapter 10: Verification and Validation

Overview
10.1 Introduction
10.2 Existing Software V&V
10.3 Feasibility and Sufficiency of Existing Software V&V Practices for SHM
10.4 Opportunities for Emerging V&V Techniques Suited to SHM
10.5 V&V Considerations for SHM Sensors and Avionics
10.6 V&V Planning for a Specific SHM Application
10.7 A Systems Engineering Perspective on V&V of SHM
10.8 Conclusion
Acknowledgments
Bibliography

Chapter 11: Certifying Vehicle Health Monitoring Systems

Overview

11.1 Introduction

11.2 Durability for VHM Systems

11.3 Mechanical Design for Structural Health Monitoring Systems

11.4 Reliability and Longevity of VHM Systems

11.5 Software and Hardware Certification

11.6 Airworthiness Certification

11.7 Health and Usage Monitoring System Certification Example

11.8 Conclusion

Acknowledgments

Bibliography

Part Three: Analytical Methods

Chapter 12: Physics of Failure

Overview

12.1 Introduction

12.2 Physics of Failure of Metals

12.3 Physics of Failure of CMCs

12.4 Conclusion

Bibliography

Chapter 13: Failure Assessment

Overview

13.1 Introduction

13.2 FMEA

13.3 SFMEA

13.4 FTA

13.5 SFTA

13.6 BDSA

13.7 Safety Analysis

13.8 Software Reliability Engineering

13.9 Tools and Automation

13.10 Future Directions

13.11 Conclusion

Acknowledgments

Bibliography

Chapter 14: Reliability

Overview

14.1 Time-to-Failure Model Concepts and Two Useful Distributions

14.2 Introduction to System Reliability

14.3 Analysis of Censored Life Data

14.4 Accelerated Life Testing

14.5 Analysis of Degradation Data

14.6 Analysis of Recurrence Data

14.7 Software for Statistical Analysis of Reliability Data

Acknowledgments

Bibliography

Chapter 15: Probabilistic Risk Assessment

Overview

15.1 Introduction

15.2 The Space Shuttle PRA
15.3 Assessing Cumulative Risks to Assist Project Risk Management
15.4 Quantification of Software Reliability
15.5 Description of the Techniques Used in the Space Shuttle PRA
15.6 Conclusion
Bibliography

Chapter 16: Diagnosis

Overview
16.1 Introduction
16.2 General Diagnosis Problem
16.3 Failure Effect Propagation and Impact
16.4 Testability Analysis
16.5 Diagnosis Techniques
16.6 Automation Considerations for Diagnostic Systems
16.7 Conclusion
Acknowledgments
Bibliography

Chapter 17: Prognostics

Overview
17.1 Background
17.2 Prognostic Algorithm Approaches
17.3 Prognosis RUL Probability Density Function
17.4 Adaptive Prognosis

17.5 Performance Metrics

17.6 Distributed Prognosis System Architecture

17.7 Conclusion

Bibliography

Part Four: Operations

Chapter 18: Quality Assurance

Overview

18.1 NASA QA Policy Requirements

18.2 Quality System Criteria

18.3 Quality Clauses

18.4 Workmanship Standards

18.5 Government Contract Quality Assurance

18.6 Government Mandatory Inspection Points

18.7 Quality System Audit

18.8 Conclusion

Bibliography

Chapter 19: Maintainability: Theory and Practice

Overview

19.1 Definitions of Reliability and Maintainability

19.2 Reliability and Maintainability Engineering

[19.3 The Practice of Maintainability](#)

[19.4 Improving R&M Measures](#)

[19.5 Conclusion](#)

[Bibliography](#)

[Chapter 20: Human Factors](#)

[Overview](#)

[20.1 Background](#)

**[20.2 Fault Management on Next-Generation
Spacecraft](#)**

**[20.3 Integrated Fault Management
Automation Today](#)**

**[20.4 Human-Automation Teaming for Real-
Time FM](#)**

**[20.5 Operations Concepts for Crew-
Automation Teaming](#)**

[20.6 Empirical Testing and Evaluation](#)

[20.7 Future Steps](#)

[20.8 Conclusion](#)

[Bibliography](#)

[Chapter 21: Launch Operations](#)

[Overview](#)

[21.1 Introduction to Launch Site Operations](#)

[21.2 Human-Centered Health Management](#)

[21.3 SHM](#)

[21.4 LS Abort and Emergency Egress](#)

[21.5 Future Trends Post Space Shuttle](#)

[21.6 Conclusion](#)

Bibliography

**Chapter 22: Fault Management
Techniques in Human Spaceflight
Operations**

Overview

22.1 The Flight Operations Team

22.2 System Architecture Implications

**22.3 Operations Products, Processes and
Techniques**

**22.4 Lessons Learned from Space Shuttle
and ISS Experience**

22.5 Conclusion

Bibliography

Chapter 23: Military Logistics

Overview

23.1 Focused Logistics

23.2 USMC AL

**23.3 Benefits and Impact of SHM on Military
Operations and Logistics**

**23.4 Demonstrating the Value of SHM in
Military Operations and Logistics**

23.5 Conclusion

Bibliography

**Part Five: Subsystem Health
Management**

Chapter 24: Aircraft Propulsion Health Management

Overview

24.1 Introduction

24.2 Basic Principles

24.3 Engine-Hosted Health Management

24.4 Operating Conditions

24.5 Computing Host

24.6 Software

24.7 On-Board Models

24.8 Component Life Usage Estimation

24.9 Design of an Engine Health Management System

24.10 Supporting a Layered Approach

24.11 Conclusion

Bibliography

Chapter 25: Intelligent Sensors for Health Management

Overview

25.1 Introduction

25.2 Sensor Technology Approaches

25.3 Sensor System Development

25.4 Supporting Technologies: High-Temperature Applications Example

25.5 Test Instrumentation and Non-destructive Evaluation (NDE)

25.6 Transition of Sensor Systems to Flight

25.7 Supporting a Layered Approach

25.8 Conclusion
Acknowledgments
Bibliography

Chapter 26: Structural Health Monitoring

Overview
26.1 Introduction
26.2 Proposed Framework
26.3 Supporting a Layered Approach
26.4 Conclusion
Acknowledgments
Bibliography

Chapter 27: Electrical Power Health Management

Overview
27.1 Introduction
27.2 Summary of Major EPS Components and their Failure Modes
27.3 Review of Current Power System HM
27.4 Future Power SHM
27.5 Supporting a Layered Approach
27.6 Conclusion
Bibliography

Chapter 28: Avionics Health Management*

Overview

28.1 Avionics Description
28.2 Electrical, Electronic and Electromechanical (EEE) Parts Qualification
28.3 Environments
28.4 Failure Sources
28.5 Current Avionics Health Management Techniques
28.6 Avionics Health Management Requirements
28.7 Supporting a Layered Approach
28.8 Conclusion
Bibliography

Chapter 29: Failure-Tolerant Architectures for Health Management

Overview
29.1 Introduction
29.2 System Failure Response Stages
29.3 System-Level Approaches to Reliability
29.4 Failure-Tolerant Software Architectures for Space Missions
29.5 Failure-Tolerant Software Architectures for Commercial Aviation Systems
29.6 Observations and Trends
29.7 Supporting a Layered Approach
29.8 Conclusion
Acknowledgments
Bibliography

Chapter 30: Flight Control Health Management

Overview

30.1 A FC Perspective on System Health Management

30.2 Elements of the FC System

30.3 FC Sensor and Actuator HM

30.4 FC/Flight Dynamics HM

30.5 FC HM Benefits

30.6 Supporting a Layered Approach

30.7 Conclusion

Bibliography

Chapter 31: Life Support Health Management

Overview

31.1 Introduction

31.2 Modeling

31.3 System Architecture

31.4 Future NASA Life Support Applications

31.5 Supporting a Layered Approach

31.6 Conclusion

Bibliography

Chapter 32: Software

Overview

32.1 Sampling of Accidents Attributed to Software Failures

32.2 Current Practice

[32.3 Challenges](#)

[32.4 Supporting a Layered Approach](#)

[32.5 Conclusion](#)

[Bibliography](#)

Part Six: System Applications

Chapter 33: Launch Vehicle Health Management

[Overview](#)

[33.1 Introduction](#)

[33.2 LVSHM Functionality and Scope](#)

[33.3 LV Terminology and Operations](#)

[33.4 LV Reliability Lessons Learned](#)

[33.5 LV Segment Requirements and](#)

[Architecture](#)

[33.6 LVSHM Analysis and Design](#)

[33.7 LV LVSHM System Descriptions](#)

[33.8 LVSHM Future System Requirements](#)

[33.9 Conclusion](#)

[Bibliography](#)

Chapter 34: Robotic Spacecraft Health Management

[Overview](#)

[34.1 Introduction](#)

[34.2 Spacecraft Health and Integrity](#)

[Concerns for Deep-Space Missions](#)

34.3 Spacecraft SHM Implementation Approaches

34.4 Standard FP Implementation

34.5 Robotic Spacecraft SHM Allocations

34.6 Spacecraft SHM Ground Rules and Requirements

34.7 SFP and SIFP Architectures

34.8 Conclusion

Bibliography

Chapter 35: Tactical Missile Health Management

Overview

35.1 Introduction

35.2 Stockpile Surveillance Findings

35.3 Probabilistic Prognostics Modeling

35.4 Conclusion

Bibliography

Chapter 36: Strategic Missile Health Management

Overview

36.1 Introduction

36.2 Fundamentals of Solid Rocket Motors

36.3 Motor Components

36.4 Challenges for Strategic Rocket Health Management

36.5 State of the Art for Solid Rocket System Health Management (SHM)

[36.6 Current Challenges Facing SRM SHM](#)

[36.7 Conclusion](#)

[Bibliography](#)

[Chapter 37: Rotorcraft Health Management](#)

[Overview](#)

[37.1 Introduction](#)

[37.2 Rotorcraft System Health Management Standard Practices](#)

[37.3 New Practices](#)

[37.4 Lessons Learned](#)

[37.5 Future Challenges](#)

[37.6 Conclusion](#)

[Bibliography](#)

[Chapter 38: Commercial Aviation Health Management](#)

[Overview](#)

[38.1 Commercial Aviation Challenge](#)

[38.2 Layered Approach to SHM](#)

[38.3 Evolution of Commercial Aviation SHM](#)

[38.4 Commercial State of the Art](#)

[38.5 The Next Generation: Intelligent Vehicles/Sense and Respond](#)

[38.6 Conclusion](#)

[Bibliography](#)

This book is dedicated to Joan Pallix, a pioneer in our field. Joan's ingenuity brought many of us together to develop early demonstrations of system health management technologies for the Space Shuttle Thermal Protection System, and her trailblazing approach provided a key foundation of the System Health Management process that we describe herein. Her dedication, originality, and technical expertise earned the respect of the System Health Management community.

About the Editors

Stephen B. Johnson has been active in the field of system health management since the mid-1980s. His experience includes the development of fault protection algorithms for deep-space probes, research into SHM processes within systems engineering, the development of SHM theory, the psychological, communicative, and social aspects of system failure, and the application of directed graph methods for assessment of testability, failure effect propagation timing, and diagnostic systems. He is the author of *The Secret of Apollo: Systems Management in American and European Space Programs* (2002) and *The United States Air Force and the Culture of Innovation 1945-1965* (2002), the general editor of *Space Exploration and Humanity: A Historical Encyclopedia* (2010), and has written many articles on SHM and space history. He has a BA in Physics from Whitman College and PhD in the History of Science and Technology from the University of Minnesota. He currently is an associate research professor at the University of Colorado at Colorado Springs, and a health management systems engineer at NASA Marshall Space Flight Center.

Thomas J. Gormley has been involved in the aerospace industry for 24 years and brings a systems engineering and implementation perspective to this SHM textbook. He was the Integrated Vehicle Health Management Project leader for Rockwell Space Systems during the early 1990s and was the developer of the Propulsion Checkout and Control System that was successfully demonstrated on the next generation reusable launch system testbed. Mr. Gormley transferred to Lockheed-Martin Telecommunication Systems where he focused his efforts on fault protection systems for commercial telecommunications. In 2000 he formed Gormley & Associates and has been a consultant for NASA

on several SHM projects. He is presently supporting NASA's Constellation Program Information Systems Office and is applying his systems engineering and health management expertise to NASA's Space Exploration Program. Mr. Gormley has published several technical papers on SHM and is a member of the American Institute of Aeronautics and Astronautics.

Seth S. Kessler is the president and CEO of the Metis Design Corporation, a small consulting firm that has specialized in structural health monitoring technologies for a decade. He has experience from managing more than three-dozen government-funded BAA, SBIR, and STTR contracts. His research interests have included distributed sensor network architectures, analytical modeling of guided waves, diagnostic algorithms for composite materials, and carbon nanotube (CNT) based multifunctional structures. In 1998 he received his SB in aerospace engineering at the Massachusetts Institute of Technology (MIT) studying the effects of a cryogenic environment on composite materials. In 1999, he received his SM from that same department, creating and experimentally validating a design tool to analyze composite structures subjected to extreme inertial loading. Dr. Kessler completed his PhD from MIT in 2002, researching structural health monitoring piezoelectric-based techniques for damage detection in composite structures. He also was a post-doc in that department, modeling durability effects in composite laminates as part of the DARPA-funded, Boeing-led Accelerated Insertion of Materials Program. Dr. Kessler was a Draper Fellow working on the DARPA seedling WASP Program, and at the Lockheed Martin Skunk Works was an advanced concepts engineer on the X33/VentureStar Program. In 1998, he received the Admiral Luis De Florez Award for Ingenuity and Creativity in Design, in 2001 was awarded the American Society for Composites PhD Research Scholarship, and was awarded Best Paper by

ASC in 2002 and the PHM Society in 2009. Dr. Kessler has more than three-dozen technical publications and holds 10 patents in his areas of expertise.

Charles D. Mott brings expertise in the social and economic aspects of large-scale technological projects. He has experience in business process improvement, systems analysis and design, financial system design and implementation, and organizational management. He has worked at Bank One, Patriot Management Corporation, Don Breazeale and Associates, Dow Chemical, and NASA. He has a bachelor's degree in management information systems from Michigan Technological University and a masters in space studies from the University of North Dakota. He is a member of the Prognostics and Health Management Society.

Ann Patterson-Hine, PE, has worked at NASA Ames Research Center since 1988. She is the branch chief for Discovery and Systems Health in the Intelligent Systems Division. She has been the project leader for advanced technology demonstrations under the Next Generation Launch Technology Program and many of the program's predecessors including the Reusable Launch Vehicle and Space Launch Initiative Programs. She participated on the Shuttle Independent Assessment Team and Wire Integrity Pilot Study at Ames. She was Principal Investigator for NASA's Exploration Technology Development Program's Integrated Systems Health Management project. Her research has focused on the use of engineering models for model-based reasoning in advanced monitoring and diagnostic systems. She received a BS degree in mechanical engineering from The University of Alabama and a doctorate in mechanical engineering from The University of Texas at Austin, and is a member of the American Institute of Aeronautics and Astronautics and a senior member of the IEEE.

Karl M. Reichard is the a research associate at the Pennsylvania State University Applied Research Laboratory and assistant professor of acoustics. He is the head of the Applied Research Laboratory's Embedded Hardware/Software Systems and Applications Department and teaches and advises graduate students in The Pennsylvania State University Graduate Program in Acoustics and the Department of Electrical Engineering. He has over 25 years of experience in the design and implementation of signal processing, control, and embedded diagnostics/prognostics systems. He has developed unattended remote sensing, active control, and health monitoring systems for land- and sea-based platforms. He earned BS, MS, and PhD degrees in electrical engineering from Virginia Tech.

Philip A. Scandura, Jr. has over 25 years of experience in the system definition and implementation of real-time embedded systems, for use in safety-critical and mission-critical applications. Mr. Scandura joined Honeywell in 1984 where he is currently employed as a staff scientist in its Advanced Technology Organization. During his tenure at Honeywell, he has specified, designed, and tested avionics systems for use in commercial, regional, business, and commuter aircraft, as well as human-rated space vehicles. He served as system architect, contributing to the development of several integrated modular avionics (IMA) and integrated vehicle health management (IVHM) systems, including those used on the Boeing 777 aircraft family. Mr. Scandura served for eight years as a certified FAA Designated Engineering Representative (DER), specializing in the certification of critical systems and equipment for aircraft. He is the author of Chapter 22, "Vehicle Health Management Systems," in *The Avionics Handbook, Second Edition*, edited by Cary R. Spitzer (CRC Press, 2006), and has written many papers on vehicle health management
