Contributor list

Foreword

Preface

SECTION I Nutrition and Obesity.

CHAPTER 1: Basics of Energy Balance

Introduction

Food Energy

Components of Total Energy Expenditure

Basal Metabolic Rate

Thermic Effect of Food

Physical Activity

Other Components of TEE

Variability of TEE

Energy Requirements

Energy Balance

Energy Expenditure and Obesity

Experimental Studies

The Epidemiological Approach

Main Clinical Correlates

Selected References

CHAPTER 2: Genotype-Phenotype Associations: Modulation by Diet and Obesity

Introduction

Environment as a Modulator of the Effect of Genetic Variants

Obesity as a Modulating Phenotype of the Effect of the Genetic Variants

Conclusions

Acknowledgments

Selected References

CHAPTER 3: Etiopathogenesis of Obesity

Introduction

Etiology of Obesity

Conclusion

Selected References

CHAPTER 4: The Epidemiology of Obesity

Introduction

Children's BMIs

Prevalence of Childhood and Adult Overweight and Obesity

Abdominal Obesity and Early Programming of Disease Sensitivity to Weight Gain

Nutritional and Physical Activity

Determinants of Weight Gain

Physical Inactivity and Compensatory Obesity

A Public Health Response to the Obesity Epidemic

Selected References

CHAPTER 5: Pre-Diabetes in Obese Adolescents: Pathophysiologic Mechanisms

Introduction

Prevalence and Natural History of IGT in Childhood Obesity

Beta-Cell Function: an Early Alteration in the Development of Type 2 Diabetes

Ectopic Fat Deposition and Insulin Resistance in Childhood Obesity

Childhood Obesity and Inflammation

Conclusion

Selected References

CHAPTER 6: Complications and Comorbidities of Obesity

Introduction

Autocrine and Endocrine Functions of Adipose Tissue

Obesity and Life Expectancy

Diabetes Mellitus and the Metabolic Syndrome

Obesity and Cancer

Reproductive and Obstetric Complications
Hypertension
Sleep Apnea Syndrome and Pulmonary
Dysfunction
Nonalcoholic Fatty Liver Disease and
Cholelithiasis
Osteoarthritis
Disabilities
Quality of Life in Obesity
Economic Costs of Obesity
Conclusions
Selected References

CHAPTER 7: Cardiovascular Damage **in Obesity and Metabolic Syndrome**

Introduction
Obesity and Systemic Hemodynamics
Body Composition and LV Anatomy
Obesity and LV function
Metabolic Syndrome
Selected References

CHAPTER 8: Treatment of Obesity: **Beneficial Effects on Comorbidities** **and Lifespan**

Introduction
Benefits and Potential Risks of Weight Loss
Selected References

CHAPTER 9: A Review of Results from Swedish Obese Subjects, SOS

Introduction

SOS Aims

Study Design and Baseline Description

Follow-up Rates

Baseline Characteristics in the SOS

Intervention Study

Weight Changes in SOS

Effects of Weight Loss on Risk Factors

Effects of Weight Loss on the Cardiovascular System

Effects of Weight Loss on Sleep Apnea

Effects of Weight Loss on Joint Pain and Fracture Frequency

Biliary Disease in the SOS Intervention and Reference Studies

Effects of Weight Loss on Lifestyle and Health Related Quality of Life

Health Economic Consequences of Bariatric Surgery

Genetic Findings in SOS

Surgical Complications in SOS

Effects of Bariatric Surgery on Overall Mortality

Effects of Bariatric Surgery on the Incidence of MI, Stroke, and Cancer

Conclusions

Selected References

CHAPTER 10: Optimal Nutrition for Health and Longevity

Introduction

Healthy Dietary Patterns

Relationship between Specific Nutrients and Risk of CVD

Nutrition and Cancer

Calorie Restriction and Longevity

Conclusions

Selected References

SECTION II Metabolic Syndrome and Diabetes

CHAPTER 11: Definition and Diagnostic Criteria for Metabolic Syndrome

Introduction

Definition of MetS

Diagnosis of MetS and its Implications

Conclusion

Acknowledgments

Selected References

CHAPTER 12: Cardiac and Vascular Effects of Adipocytokines in Normal

and Obese Individuals: The Concept of Cardiometabolic Risk

Adipose Tissue and “Cardiometabolic Risk”

The Concept of Dysfunctional Adipose Tissue: “Adiposopathy”

Leptin

Resistin

Apelin

Tumor Necrosis Factor- α and Interleukin-6

Adiponectin

Adiponectin as a Protective Factor against Atherosclerosis and the Cardiometabolic Risk

Adiponectin as a Preferential Target to Treat Cardiometabolic Disease

Conclusions

Selected References

CHAPTER 13: Dietary Carbohydrates, Overweight and Metabolic Syndrome: The Role of Glycemic Index in a Healthy Diet

Dietary Carbohydrates: Quantity/Quality

Dietary Carbohydrates and Overweight

Dietary Carbohydrates and Metabolic Syndrome

Conclusions

Selected References

CHAPTER 14: Metabolic Effects of Wholegrain Foods in Relation to Composition, Structure and Type of Food

Introduction

Postprandial Glucose and Insulin Responses in Relation to Structure and Type of Cereal Foods

Metabolic Effects Associated with Fermentation of the Cereal Fiber Complex Evidence Based on Intervention Studies

Future Outlook

Selected References

CHAPTER 15: Complex Dietary Patterns (Mediterranean Diet, Vegetarian/Vegan Dietary Models): Impact on Carbohydrate and Lipid Metabolism

Introduction

Mediterranean Diet

Vegetarian and Vegan Diets

Conclusion

Selected References

CHAPTER 16: Physical Activity and Risk of Cardiovascular Diseases

Introduction

Definitions
Measures
Epidemiologic Evidence
Recommendation
Selected References

CHAPTER 17: Physical Exercise in the Prevention and Treatment of Obesity, Diabetes, and Metabolic Syndrome

Introduction
Obesity
Metabolic Syndrome
Diabetes
Proposed Physiological Mechanisms
Conclusion
Selected References

CHAPTER 18: Functional Foods for Diabetes and Obesity

Introduction
Functional Foods for Obesity
Functions Associated with Body Fat Deposition
Energy Intake
Lifestyle is a Risk Factor for Type 2 for Diabetes
Functions Associated with Insulin Sensitivity and Blood Glucose Control
Functional Foods for Diabetes

Conclusions

Acknowledgments

Selected References

SECTION III

Hypercholesterolemia and Early Atherosclerosis

CHAPTER 19: Familial Dyslipidemias: From Genetics to Clinical Picture

Familial Hypercholesterolemia

Familial Combined Hyperlipidemia

Familial Hypertriglyceridemia

Chylomicronemia

Selected References

CHAPTER 20: HDL, Reverse Cholesterol Transport, and Atherosclerosis

*High-Density Lipoproteins: Structure and
Metabolism*

Reverse Cholesterol Transport

Selected References

CHAPTER 21: Role of Polyunsaturated Omega-3 Fatty Acids and Micronutrient Intake on

Atherosclerosis and Cardiovascular Disease

Cardiovascular Disease, Diet, and Mortality in Contemporary Societies

Dietary Fats

The Omega-3 Fatty Acids

Fish, Omega-3 Fatty Acids, and CVDs

Mechanisms of Cardioprotection by Omega-3 Fatty Acids

Micronutrients and Cardiovascular Disease

Wild Plants and Cardiovascular Health

Why This Emphasis on Micronutrients?

Conclusions

Selected References

CHAPTER 22: Alcohol Intake, Dyslipidemia, and CVD

Introduction

Biologic Pathways

Effects of Alcohol Drinking Patterns

Variability of Lifetime Drinking Habits

Alcohol Intake and Prognosis in Patients with Established CHD

Conclusions

Selected References

CHAPTER 23: Dyslipidemia in Chronic Renal Disease

Introduction

Biochemistry

Serum Cholesterol and Lp(a) in CKD

Atherosclerosis in CKD and in ESRD

Patients

Lipids and the Evolution of CKD

Efficacy of Statins in Cardiovascular

Prevention in CKD Patients

Conclusion

Selected References

CHAPTER 24: Subclinical Hypothyroidism, Dyslipidemia, and Cardiovascular Risk

Thyroid Physiology

Relevance to the Public Health: Necessity

for Screening for Subclinical

Hypothyroidism?

Acknowledgment

Selected References

CHAPTER 25: Genetic Influences on Blood Lipids and Cardiovascular Disease Risk

Introduction

Exogenous Lipoprotein Pathway

Endogenous Lipoprotein Metabolism

Reverse Cholesterol Transport

Conclusions

Acknowledgments

Selected References

**CHAPTER 26: The Relationship
between Dyslipidemia and
Inflammation**

Introduction

**Critical Steps for Development of
Atherosclerosis Endothelial Dysfunction**

Dyslipidemia

Low-Density Lipoprotein-Cholesterol

High-Density Lipoprotein-Cholesterol

Biomarkers of Inflammation in the Disease

Risk Prediction

C-Reactive Protein

**Lipoprotein-Associated Phospholipase A₂
(Lp-PLA₂)**

Serum Amyloid A

Interleukin-6

Interleukin-1

Conclusion

Acknowledgment

Selected References

**CHAPTER 27: Dyslipidemia in
Children: Diagnosis and Management**

Introduction

Clinical Diagnosis

Therapeutic Aspects

Selected References

CHAPTER 28: Early Atherosclerotic Lesions in Childhood and Adolescence

Atherogenesis in Children

Early Atherosclerotic Lesions in Childhood and Adolescence: Noninvasive In Vivo Evaluation

Selected References

CHAPTER 29: Phytosterols, Plasma Lipids and CVD Risk

Introduction

Relation between Phytosterols and the Metabolic Syndrome

Phytosterols as Biomarkers to Identify Cholesterol Hyperabsorbers

Are Phytosterols Biomarkers Predicting the Risk of Cardiovascular Disease?

Phytosterols as Food Supplements to Lower LDL-C

Selected References

CHAPTER 30: Nitric Oxide in the Development of Vascular Diseases and Regenerative Angiogenesis

Nitric Oxide Signaling

NO in Cascular Dysfunction

Clinical Measurements of Endothelial Function

NOS Competitive Inhibitors

NOS Knockout Mice
NO and Oxidation-Sensitive Mechanisms
eNOS Polymorphisms
NO and Vascular Regeneration
Acknowledgments
Selected References

CHAPTER 31: Impact of Treating Dyslipidemia on Cardiovascular Events

Introduction
**Studies on Treatment of
Hypercholesterolemia**
**Studies on Treatment of
Hypertriglyceridemia and Low HDL-
Cholesterol**
**Studies on Treatment of Low HDL-
Cholesterol**
Conclusion
Selected References

CHAPTER 32: Evolution of the Lipid Clinic, 1968-2008

Summary
Introduction
Climate of Opinion
The Patient Profile
Side Effects of Lipid-Active Drugs
Inadequate Response to Treatment

Major Hyperlipidemias

Case Finding of Major Hyperlipidemias

Therapeutic Goals

**Risk Estimation and the Decision to
Medicate**

**Guidelines, Treatment Algorithms, and
Clinical Judgment**

**“Normal,” “Optimal,” “Desirable,” and
Physiological Lipid Levels**

Cardiovascular Disease Prevention

Medical Education

Risk Reduction in the Community

Conclusions

Selected References

SECTION IV Nutrition, Hypertension, and Cardiovascular Disease

CHAPTER 33: From Abdominal Adiposity to Hypertension: Mechanisms and Clinical Implications

Introduction

**Relationship between Obesity and High
Blood Pressure**

**Mechanism Whereby Obesity Might Cause
Hypertension**

Sympathetic Nervous System

**Possible Mechanisms Responsible for
Activation of the Sympathetic Nervous
System in Obesity**

Therapeutic Implications

Conclusions

Acknowledgment

Selected References

CHAPTER 34: Role of the Adipose- Tissue Renin-Angiotensin- Aldosterone System in Obesity and Obesity-Associated Hypertension

Introduction

**The Adipose-Tissue Renin-Angiotensin-
Aldosterone System**

**Obesity Influences the Adipose-Tissue RAAS
Obesity and Hypertension**

**Weight Loss Decreases Blood Pressure and
RAAS Activity**

**Angiotensin II and Adipose-Tissue
Cellularity and Metabolism**

**Angiotensin Receptors Influence Adipocyte
Growth and Metabolism in Rodents**

**AT₁-Receptor-Mediated Regulation of Blood
Flow and Lipolysis in Humans**

**Influence of Angiotensin II on Adipokine
Production**

Conclusion

Selected References

CHAPTER 35: Relationship of Dietary Electrolyte Intake to Blood Pressure Regulation and Hypertension

Introduction

Salt Intake

Potassium Intake

Calcium Intake

Magnesium Intake

Selected References

CHAPTER 36: Genetic Susceptibility and Metabolic Bases of BP Salt Sensitivity

Introduction

Monogenic Hypertension

Role of Genetic Variation in BP Homeostasis

Variants in Other Candidate Genes Involved in Sodium Transport

Genome-wide Scan and Quantitative Trait

Loci Approach

Conclusions

Selected References

CHAPTER 37: Are Sodium and Potassium Intake Independent Predictors of Cardiovascular and Cerebrovascular Events?

Dietary Sodium and Cardiovascular Risk

[*Conclusions*](#)

[*Dietary Potassium and Cardiovascular Risk*](#)

[*Conclusions*](#)

[*Selected References*](#)

[**CHAPTER 38: Metabolic and Dietary Influences on Sympathetic Nervous System Activity**](#)

[*Introduction*](#)

[*Diabetes, Insulin Resistance, and the Role of Hyperinsulinemia*](#)

[*Obesity and the Sympathetic Nervous System*](#)

[*Metabolic Syndrome and the Sympathetic Nervous System*](#)

[*Dietary Influences on the Sympathetic Nervous System*](#)

[*Selected References*](#)

[**CHAPTER 39: Improved Nutrition: Key to Solving the Populationwide Blood Pressure Problem**](#)

[*The Population-wide Blood Pressure Problem*](#)

[*Historical/Anthropological Notes*](#)

[*INTERSALT, Phase 1*](#)

[*INTERSALT, Phase 2*](#)

[*Multiple Risk Factor Intervention Trial \(MRFIT\) Epidemiologic Analyses*](#)

Chicago Western Electric Study

INTERMAP

Randomized Trials on Prevention and Control of High BP by Nutritional Means

Conclusions

Acknowledgments

Selected References

CHAPTER 40: Alcohol and Coffee Intake, BP, and Cerebrovascular Disorders

Introduction

Alcohol and Blood Pressure

Alcohol and Stroke

Caffeine and Blood Pressure

Caffeine and Stroke

Conclusion

Selected References

CHAPTER 41: Fruit and Vegetable Consumption, Hypertension, and Risk of Stroke

Introduction

Classification of Hypertension and Stroke

Issues Related to the Assessment of Fruit and Vegetable Consumption

Influence of Fruit and Vegetable

Consumption on Risk Factors for Stroke

Fruit and Vegetable Intake and Hypertension

Fruit and Vegetable Intake and Risk of Stroke

Nutrients and Bioactive Aspects of Fruit and Vegetables

Conclusions

Selected References

CHAPTER 42: Complex Dietary Patterns and Blood Pressure

Introduction

Importance of Dietary Patterns

Vegetarian Diet

Dash Diet

Conclusion

Selected References

CHAPTER 43: Role of Obesity and Metabolic Alterations in Hypertensive Renal Disease and in Chronic Kidney Disease

Introduction

Obesity and CKD: BP and beyond

Clinical Epidemiology of Metabolic Syndrome Components and CKD

Redefining the Problem of Hypertensive

Nephropathy as a Cause of CKD and ESRD

Why and How Metabolic Factors and Obesity Damage the Kidney?
Prevention and Treatment of CKD Secondary to Metabolic Factors and Hypertension
Selected References

CHAPTER 44: Current Experience and Future Perspectives for Worldwide Reduction of Dietary Salt Intake

Introduction
Salt Intake around the World
Major Sources of Salt Intake
Current Salt Intake Recommendations
Worldwide Actions Occurring on Salt
Future Perspectives
Conclusion
Selected References

SECTION V Hemostasis and Thrombosis: From Nutritional Influences to Cardiovascular Events

CHAPTER 45: Risk Factors for Arterial Thrombosis

Introduction
Mediterranean Diet (MD)

Mediterranean Diet Components
Mechanism(s) of Action of Alcohol
Mechanism(s) of Action of Wine
Olive Oil and Cardiovascular Disease
Olive Oil and Hemostasis
Conclusions
Acknowledgment
Selected References

***CHAPTER 46: Platelets, Leukocytes,
and Vascular Wall Interactions in
Cardiovascular Disease: Modulatory
Effects of Dietary Polyphenols***

Introduction
Cell-Cell Interactions in Thrombosis
***Clinical and Epidemiological Evidence of
Cell-Cell Interactions in Cardiovascular
Disease***
Modulation of Cell-Cell Interactions
***Dietary Polyphenols and Cell-Cell
Interactions***
Acknowledgments
Selected References

***CHAPTER 47: Gene-Environment
Interaction in the Molecular
Regulation of Plasma Coagulation
Proteins***

Introduction

Established Risk Factors
Coagulation and Inflammation
Searching for New Risk Factors
Hunting for Genetic Risk Markers
Conclusions
References

CHAPTER 48: Nutrition and Cardiovascular Disease: ω -3 PUFA

Introduction
 ω -3 PUFA: Biochemistry and Physiology
 ω -3 PUFAs and Prevention of CHD: Randomized Studies
 ω -3 PUFAs and Prevention of Cardiovascular Death: Meta-analyses of Randomized Clinical Studies
Conclusions
Selected References

CHAPTER 49: Nutrition and Cardiovascular Disease: Homocysteine

Introduction
The Thrombogenic Mechanism of Homocysteine
Homocysteine and Cardiovascular Disease: Epidemiologic Evidence
Intervention Studies with Vitamins

Intervention Studies with Lipid-Lowering Agents
Conclusions
Selected References

SECTION VI Nutrition, Metabolism, and the Aging Process

CHAPTER 50: Nutrients and Cellular Aging

Introduction

Nutrients

Nutrients and Macroautophagy

Calorie Restriction and Cellular Aging

Resveratrol, a Paradigmatic Dietary

Polyphenol with Pleiotropic Effects

Selected References

CHAPTER 51: Interaction between Diet and Genes on Longevity

Introduction

Lipoprotein-Related Candidate Genes and Longevity

Fatty Acids and Aging

Calorie Restriction

Selected References

CHAPTER 52: The Role of Diet on Cognitive Decline and Dementia

Introduction

Macronutrients and Micronutrients in Relation to Age-Related Cognitive Decline and Dementia

B Vitamins

Antioxidants and Other Vitamins

Alcohol

Plasma Insulin, Dietary Glucose, and Cognition

Conclusion

Selected References

CHAPTER 53: Neurovascular Protection in Old Age

Introduction

Cognitive Impairments Associated with Cerebrovascular Disease

Hypertension and Vascular Cognitive Impairment in the Elderly

Hypercholesterolemia and Vascular Cognitive Impairment in the Elderly

Homocysteine and Vascular Cognitive Impairment in the Elderly

Metabolic Syndrome, Diabetes, Obesity, Lifestyle, and Vascular Cognitive Impairment in the Elderly

*Treatments and Vascular Cognitive
Impairment in the Elderly
Selected References*

CHAPTER 54: Cardiovascular Risk Factors and Their Treatment in the Oldest Old

Introduction

Blood Pressure and Cardiovascular Disease

Cholesterol and Cardiovascular Disease

Smoking and Cardiovascular Disease

Other Risk Factors

*Who to Treat? Absolute Cardiovascular
Disease Risk*

*Population-Based Approach: Reduction of
Risk Factor Levels in the Community as a
Whole*

Nutrition

Physical Activity

Conclusions

Selected References

CHAPTER 55: Nutrition and Lifespan in Developing Countries

Demographic transition

Epidemiologic Transition

*Globalization and Growing Epidemic of
Chronic Diseases in Developing Countries*

Nutrition Transition

Health Policy
Selected References
