## Foreword

In the past century, humankind has made truly remarkable progress in understanding the mystery of life, from the discovery of DNA as a basic form of genetic material, the revelation of the chemical and structural nature of genes, and the establishment of a genetic central dogma, to the complete sequencing of the human genome. Although the central genetic dogma applied to a majority of life forms is defined as genetic information flow from DNA, to messenger RNA, then to protein, the complete sequencing of the three billion-letter human genome has shed little light on how precisely such unidirectional information flow of tens of thousands of genes is programmed. If the achievement of complete sequencing of the one-dimensional linear genetic code of the human genome can be compared with man landing on the moon, then the complexity and difficulty in interpreting the genomic instruction into the form of gene expression in a four-dimensional biological context, such as during development and disease, will prove to be a much more challenging and daunting task than that of getting man back from the moon to the earth.

Although classical genetics has been powerful in dissecting molecular diseases affected by the loss of function of a protein encoded by a single gene, such an approach has proved to be less fruitful for the understanding of phenotypes or diseases that are controlled by multiple genes, such as cancer, type 2 diabetes and heart disease. In fact, many of these genes themselves are signalling molecules, each of which controls the expression of a subset of downstream genes. Thus, analysing differential gene expression, or RNA genetics, a concept put forth by the late Ruth Sager, has become one of the most widely practiced strategies for studying the more complicated biological systems. Perhaps one of the earliest success stories of this approach was the discovery of the p53 tumour-suppressor protein in late 1970s as a protein over-expressed when normal cells were infected by DNA tumour viruses. Two-dimensional protein gel electrophoresis later was developed to provide a more complete picture of cellular protein expression. Methodologies that focused on mRNA expression, such as differential screening and subtractive hybridisation, were invented in the early 1980s, which proved to be more comprehensive, sensitive and informative in gene identification than two-dimensional protein gels. The discovery of T-cell receptors by Mark Davis and colleagues, when they compared the differences in mRNA expression between T and B-cells using such strategies,

provided the most beautiful example of gene discovery through the analysis of gene expression. The success of T-cell receptor discovery fuelled a great flood of biomedical research using gene expression analysis as a basic strategy in understanding a wide spectrum of biological systems. Several modern and more sophisticated molecular biological tools for the global analysis of gene expression at mRNA levels were invented in the 1990s. These methods, including differential display (DD), serial analysis of gene expression (SAGE) and DNA microarrays, have led to an explosion in the amount of research in gene expression analysis. The combined Medline hits of DD, SAGE and DNA microarrays have exceeded 6,000! Thereafter, numerous modifications of these technologies, as well as new approaches focusing on the analysis of gene expression at various levels both *in vivo* and *in vitro*, recently have been described.

This timely book entitled "Analysing Gene Expression" edited by the German scientist Dr. Stefan Lorkowski and the Irish physician Dr. Paul Cullen, and published by Wiley-VCH, took years to complete and represents a collective effort of over 200 researchers in the world, many of whom are leaders in the field of gene expression analysis. Unlike many previous books that focus on a single technology, "Analysing Gene Expression" provides a comprehensive description of nearly every technique and methodology ever invented for the analysis of gene expression, making it truly an encyclopaedia on this emerging subject in modern biology. The book includes not only basic background knowledge of gene expression at the levels of transcription, post-transcription, translation and post-translation, but also step-by-step protocols with a balanced and unbiased treatment of each methodology. Thus, whether you are a novice or a veteran in the field, this book will guide you through the jungle of old and new methodologies for gene expression analysis, and allow you to make informed choices as to which method(s) may best fit the type of biological problem under investigation.

For those who have never been there before, it cannot be emphasised enough that no methodology in gene expression analysis is foolproof, and finding a truly differentially expressed gene is only the first important step of a long journey. Undoubtedly, this book has everything you need to know to make that right first step. Ultimately, it will be the functional characterisations of each gene by genetic, cell biological and biochemical methods, that likely will provide the real proof (or disproof) of the relevance of a gene to the biological system under investigation. In the preface to a methodology book on protein purification, Dr. Arthur Kornberg once quoted an admonition of Efraim Racker, who said, "Don't waste clean thinking on dirty enzymes" to illustrate the importance of the good biochemical practices that are at the core of enzymology. A similar doctrine, "Don't waste clear thinking on dirty data", certainly will continue to produce a better quality of science in the field of gene expression analysis in the new millennium.

Peng Liang  
Nashville, September 2002

## Preface

In February 2001, the draft sequence of the human genome was published. While at the time of writing many of the details still remain to be worked out, broad consensus now exists on the architecture of our genetic makeup. Understandably, therefore, the focus of cutting-edge research is now on functional genomics, *i.e.* the study of gene expression, and of its regulation, at the mRNA and the protein level.

Techniques for studying gene expression have burgeoned. However, as far as we are aware there does not yet exist a single comprehensive work devoted to this topic. This is what inspired us to compile and co-author this book. Our aim was two-fold. First, to provide a compendium of current methods of analysing gene expression with sufficient detail to allow the novice to decide what technique is most suitable for a particular application. Second, to put these different methods into perspective with relation to each other and to highlight the relative advantages and disadvantages associated with each.

We have divided this book into seven chapters, not because of the biblical charm of the number seven, but because we found this to be the most logical way to organise the content. Chapter 1 describes the fundamental biology of gene expression and chapter 2 outlines the tools needed to prepare samples and carry out gene expression analysis. Chapter 3 describes methods of mRNA expression analysis that can be implemented in the normal research setting, while chapter 4 is devoted to high-throughput methods more suitable to the industrial environment. Chapter 5 describes methods for analysing protein expression, chapter 6 is devoted to methods for analysing gene expression *in situ* and in the living organism at the mRNA and protein levels. Finally, chapter 7 rounds off the book by describing currently available bioinformatics approaches and internet databases.

To our knowledge, this work represents the most complete text currently available devoted solely to the topic of analysing gene expression. We have done our best to make it as up-to-date as possible. Most contributions represent the state of the art in March/April 2002. Although the two volumes of this book run to nearly 1,000 pages, it is still not possible for them to provide all the experimental detail needed for the researcher to implement the protocols in his or her laboratory. For that reason, we have made a special effort to comprehensively cite relevant literature, and to ensure that the papers and books cited are as recent as possible.

This is reflected in the large number of citations from 2001 and 2002. Despite our best efforts, it is possible that this book has overlooked important techniques or approaches. We apologize for any egregious gaps, responsibility for which is entirely our own. Wherever possible, we have tried to eliminate redundancy in the text. However, in a compendium of this nature, a degree of repetition is unavoidable, and we ask readers to overlook any particularly irritating examples that still remain.

No scholarly endeavour can today ignore the impact of the internet. In deference to this fact, we have included as much information as possible on currently available internet resources. One of the drawbacks of the world wide web is its ephemerality, and we hope that readers will excuse us if some of the links cited no longer function, or if their content is not as described.

This book would not have been possible without the encouragement and unflagging support of our publishers at Wiley-VCH Verlag. We are particularly grateful to Dr. Hans-Joachim Kraus for hours of helpful discussion and advice with regard to content and scope, and to Hans-Jochen Schmitt for expert advice with regard to the layout of the text. We thank Professor Gerd Assmann of the Institute of Arteriosclerosis Research for providing us with the facilities to carry out this work. Furthermore, we are grateful to our partners, Bernadette Biermann and Susanne Cullen for their support at all stages of the project. We also thank Bernadette Biermann for countless hours of correction and proof-reading. Parts of the work were made possible by a grant from the European Union to Dr. Paul Cullen (grant no. QLG1, 1999-01007). Limitations of space prevent us from naming the funding sources of all contributors, for which we would like to sincerely express our gratitude and that of the respective authors.

Throughout the text, we have referred to researchers in the masculine form only. This is purely a convention to save space and is in no way intended as a slight on our female colleagues.

Finally, we would like to thank all the contributors who made this work possible. We hope that it proves useful to our fellow-scientists in their attempt to navigate the choppy seas of the post-genomic era.

Stefan Lorkowski and Paul Cullen  
Münster, September 2002

## Volume 1

**Foreword** *V*

**Preface** *VII*

**List of Contributors** *XXII*

<b>1</b>	<b>Basic concepts of gene expression</b>	<b>1</b>
1.1	Introduction	1
1.2	Basics of transcription and translation in the cell	2
1.2.1	Introduction	2
1.2.2	Transcription	3
1.2.3	Translation	5
1.2.4	Summary	9
1.3	Regulation of transcription	9
1.3.1	Introduction	9
1.3.2	mRNA expression profiles – the transcriptome	9
1.3.3	Protein expression profiles – the proteome	13
1.3.4	Interaction between genes and proteins – the interactome	14
1.3.5	The transcription machinery and core promoters	16
1.3.6	Regulatory promoters	20
1.3.7	Enhancers	21
1.3.8	Locus control regions	22
1.3.9	Matrix attachment regions	23
1.3.10	Insulators	23
1.3.11	RIDGEs – Regions of increased gene expression	24
1.3.12	Enhanceosomes	25
1.3.13	Chromatin	25
1.3.14	Silencer elements	26
1.3.15	Transcription factors, repressors and co-repressors	26
1.3.16	Epigenetics	29
1.3.17	Summary and conclusions	30

- 1.4 Post-transcriptional regulation 30
  - 1.4.1 Introduction 30
  - 1.4.2 Regulation of RNA stability and degradation 31
  - 1.4.3 Regulation of transcription elongation 33
    - 1.4.3.1 Introduction 33
    - 1.4.3.2 Regulation of transcription elongation in prokaryotes 34
    - 1.4.3.3 Regulation of transcription elongation in eukaryotes 35
    - 1.4.3.4 Conclusions 36
  - 1.4.4 Differential/alternative pre-mRNA splicing 38
  - 1.4.5 *Trans*-RNA splicing 39
  - 1.4.6 Regulation of mRNA transport 40
  - 1.4.7 Directed intracellular mRNA localisation 40
  - 1.4.8 Regulation of mRNA polyadenylation 45
  - 1.4.9 Antisense RNA 45
  - 1.4.10 RNA editing 47
  - 1.4.11 Summary and conclusions 49
- 1.5 Post-translational modification of proteins 51
  - 1.5.1 Introduction 51
  - 1.5.2 Proteolytic cleavage of proteins 52
  - 1.5.3 Acylation 53
  - 1.5.4 Prenylation 53
  - 1.5.5 Methylation 54
  - 1.5.6 Sulphation 54
  - 1.5.7 Phosphorylation 54
  - 1.5.8 Ubiquitination 55
  - 1.5.9 Glycosylation 56
  - 1.5.10 Conclusions 57
- 1.6 Correlation of mRNA and protein expression 58
  - 1.6.1 Introduction 58
  - 1.6.2 Levels of mRNA and protein expression: correlations and discrepancies 59
  - 1.6.3 Conclusions 62
- 1.7 Housekeeping genes, internal and external standards 63
  - 1.7.1 What are housekeeping genes? 63
  - 1.7.2 Survey of the most important housekeeping genes 65
    - 1.7.2.1 Glyceraldehyde-3-phosphate dehydrogenase 65
    - 1.7.2.2  $\beta$ -Actin 66
  - 1.7.3 Other commonly used housekeeping genes 66
    - 1.7.3.1 Ribosomal RNA (rRNA) 67
  - 1.7.4 New identified 'maintenance genes' 67
  - 1.7.5 Methods of quantification 69
    - 1.7.5.1 Normalisation (*via* internal standards) 69
    - 1.7.5.2 Standard curves (*via* external standards) 69
    - 1.7.5.3 Alternative methods (*via* internal standards) 70
  - 1.7.6 Summary 71

1.8	Classification of differential gene expression technologies	72
1.8.1	Introduction	72
1.8.2	From single genes to transcriptomes	72
1.8.3	Methods of classification	74
1.8.4	Conclusions	76
1.9	Summary	77

5.6.4	Discussion	694
5.7	Summary	694
5.8	References	695
<b>6</b>	<b>Methods for mRNA and protein expression analysis <i>in situ</i> and <i>in vivo</i></b>	<b>703</b>
6.1	Introduction	703
6.2	<i>In situ</i> hybridisation, immunocytochemistry and immunohistochemistry	704
6.2.1	Introduction	704
6.2.2	<i>In situ</i> hybridisation	705
6.2.2.1	Probe types	705
6.2.2.2	Probe labels and detection methods	707
6.2.2.3	Probe design strategy	708
6.2.2.4	Sample acquisition and fixation	709

- 6.2.2.5 Preparation and hybridisation of specimens 709
- 6.2.2.6 Optimisation and control of *in situ* hybridisation analysis 710
- 6.2.2.7 Increasing sensitivity of detection 711
- 6.2.3 Immunocytochemistry and immunohistochemistry 711
- 6.2.4 Advanced techniques 713
- 6.2.5 Application in the study of drug efficacy and toxicity 714
- 6.3 Visualising RNA in living cells 715
  - 6.3.1 Introduction 715
  - 6.3.2 Fluorescence *in vivo* hybridisation 716
    - 6.3.2.1 Probe selection 716
    - 6.3.2.2 Cell transfection 719
    - 6.3.2.3 Detection of hybridised RNA in living cells 720
  - 6.3.3 Alternative methods for visualising RNA *in vivo* 722
    - 6.3.3.1 Direct and indirect labelling 722
    - 6.3.3.2 Two plasmid expression 722
- 6.4 MRI – Magnetic resonance imaging 724
  - 6.4.1 Introduction 724
  - 6.4.2 Imaging mRNA with magnetic switches 725
  - 6.4.3 Imaging proteins with targeted probes 727
  - 6.4.4 High-throughput imaging 727
  - 6.4.5 Magnetic resonance-sensitive marker genes 728
    - 6.4.5.1 Tyrosinase 728
    - 6.4.5.2 Activatable enzyme-sensitive magnetic resonance probes 729
    - 6.4.5.3 Internalising receptors 731
- 6.5 MRS – Magnetic resonance spectroscopy 732
  - 6.5.1 Introduction 732
  - 6.5.2 Principles and basics 733
  - 6.5.3 *In vivo* spectroscopy of mRNA and protein expression 735
  - 6.5.4 Discussion 737
- 6.6 PET – Positron emission tomography 739
  - 6.6.1 Introduction 739
  - 6.6.2 From clinical PET to quantitative small laboratory animal tomography 742
  - 6.6.3 Examples of molecular imaging and imaging of gene expression with PET 742
    - 6.6.4 Quantitative imaging in oncology 743
    - 6.6.5 Quantitative imaging of transgene and endogenous gene expression 743
    - 6.6.6 Discussion and conclusions 746
- 6.7 SPECT – Single photon emission computed tomography 747
  - 6.7.1 Introduction 747
  - 6.7.2 Principles and basics 747
  - 6.7.3 Direct imaging of gene expression 749
  - 6.7.4 Indirect imaging *via* expressed proteins 750
  - 6.7.5 Conclusions 752
- 6.8 Optical *in vivo* imaging 752
  - 6.8.1 Introduction 752

6.8.2	Fluorescent proteins	753
6.8.3	Bioluminescence	755
6.8.4	NIRF – Near-infrared fluorescent imaging	755
6.8.4.1	Optical imaging of mRNA with molecular beacons	755
6.8.5	Enzyme-sensing, activatable NIRF probes	756
6.8.5.1	Receptor-targeted NIRF-probes	758
6.9	Summary	758
6.10	References	759
<b>7</b>	<b>Computational methods and bioinformatic tools</b>	<b>769</b>
7.1	Introduction	769
7.2	Comparative expressed sequence tag analysis	770
7.2.1	Introduction	770
7.2.2	Processing expressed sequence tags prior to content analysis	771
7.2.3	Gene content and annotation of expressed sequence tags	772
7.2.4	Expressed sequence tags in comparative genomics	774
7.2.5	<i>In silico</i> subtraction using clustered sets of expressed sequence tags	776
7.2.6	Expressed sequence tag data repositories and cDNA clone distribution centres	777
7.3	Data management and data mining	778
7.3.1	Introduction	778
7.3.1.1	Current situation	778
7.3.1.2	Future development	779
7.3.1.3	Taking part in bioinformatics	779
7.3.1.4	Hardware and software demands	780
7.3.1.5	Data types, structures and processing	780
7.3.1.6	Communication structures	781
7.3.2	Building a test scenario	781
7.3.2.1	Microarray experiments	781
7.3.2.2	Analysing the workflow – getting things done	783
7.3.2.3	Designing the question and choosing the right tools for the answer	784
7.3.2.4	Scaling up	784
7.3.3	Strategies of data mining	784
7.3.3.1	Data evaluation and representation	784
7.3.3.2	Principles of query languages	785
7.3.3.3	Data mining	785
7.3.3.4	Custom solutions	786
7.3.4	Summary	787
7.4	Integration of heterogeneous high-throughput gene expression data	787
7.4.1	Introduction	787
7.4.2	Steps towards data integration	788
7.4.3	Initial steps in realising data integration	788
7.4.4	Conclusions	789
7.5	Cluster analysis of gene expression profiles	790
7.5.1	Introduction	790

7.5.2	Information content of gene expression clusters	790
7.5.3	Similarity matrices and gene expression matrices	792
7.5.4	Clustering algorithms	792
7.5.4.1	Hierarchical clustering	793
7.5.4.2	Self-organising maps	794
7.5.4.3	K-means	795
7.5.4.4	Gene shaving	796
7.5.5	Evaluation of gene expression clusters	797
7.5.6	Conclusion	798
7.6	Promoter finding in eukaryotic genomes	798
7.6.1	Introduction	798
7.6.2	Transcription regulation in eukaryotes	799
7.6.2.1	Promoter structure	799
7.6.2.2	Transcription factors	799
7.6.2.3	Combinatorial nature of transcription regulation	800
7.6.3	Databases on transcriptional regulation	801
7.6.4	<i>In silico</i> study of gene transcription regulation	802
7.6.4.1	Recognition of <i>cis</i> -regulatory elements	802
7.6.4.2	Recognition of composite regulatory elements	805
7.6.4.3	Recognition of promoters	808
7.6.5	Conclusions	811
7.7	GeneEMAC – Three-dimensional visualisation of gene expression	811
7.7.1	Introduction	811
7.7.2	Principles and basics of the GeneEMAC concept	813
7.7.3	Specimen preparation	814
7.7.3.1	Whole-mount <i>in situ</i> hybridisation	814
7.7.3.2	Embedding	814
7.7.3.3	Introduction of external markers	814
7.7.3.4	Capturing of a reference image	815
7.7.3.5	Histological sectioning	815
7.7.4	Microscopy and digital image processing	815
7.7.4.1	Image capturing	815
7.7.4.2	Image congruencing	816
7.7.4.3	Image segmentation	816
7.7.4.4	Generation of a three-dimensional model	816
7.7.5	Visualisations of models	817
7.7.6	Examples	817
7.7.6.1	Whole-organism screens	817
7.7.6.2	High-resolution analysis	818
7.7.7	Discussion	819
7.8	RNA-based gene expression databases and analyses tools	819
7.8.1	Introduction	819
7.8.1.1	Choice of a database management systems	820
7.8.1.2	cDNA database based on relational database management systems	820
7.8.1.3	Spatial and temporal gene expression data	820

- 7.8.1.4 Data format 821
- 7.8.1.5 Types of data 822
- 7.8.1.6 Use of other databases 823
- 7.8.2 ASDB – The Alternative Splicing Database 824
- 7.8.3 AsMamDB – The Alternative Splice Database of Mammals 825
- 7.8.4 BodyMap – An anatomical gene expression database of human and mouse 825
- 7.8.5 The CYTOMER® Gene Expression Database on human organs and cell types 826
- 7.8.6 Database of three-dimensional visualisation of gene expression 828
- 7.8.7 dbEST – The Database of Expressed Sequence Tags 829
- 7.8.8 DDD – Digital Differential Display 830
- 7.8.9 The Genexpress IMAGE Knowledge Base of the Human Genome and Transcriptomes 832
- 7.8.10 The Gencarta™ Database 833
- 7.8.11 GEO – Gene Expression Omnibus Database 834
- 7.8.12 GXD – The Mouse Gene Expression Database 835
- 7.8.13 ISG Database – Interferon-Stimulated Gene Database 836
- 7.8.14 The Kidney Development Database 837
- 7.8.15 MAGEST – The Maboya Gene Expression Patterns and Sequence Tags Database 838
- 7.8.16 MethDB – The DNA Methylation Database 839
- 7.8.17 EMAGE – The Edinburgh Mouse Atlas Gene Expression Database 840
- 7.8.18 RAD – The RNA Abundance Database 842
- 7.8.19 The Rochester Muscle Database 843
- 7.8.20 SAGEmap – The serial analysis of gene expression tag to gene mapping database 844
- 7.8.21 SGD – The *Saccharomyces* Genome Database and its Expression Connection 845
- 7.8.22 SMD – The Stanford Microarray Database 845
- 7.8.23 TRIPLES – The Database of Transposon-Insertion Phenotypes, Localisation, and Expression in *Saccharomyces cerevisiae* 847
- 7.8.24 UTRdb and UTRsite – The Specialised Databases of Sequences and Functional Elements of 5' and 3'-Untranslated Regions of Eukaryotic mRNAs 849
- 7.8.25 yMGV – The Yeast Microarray Global Viewer 850
- 7.9 Protein-based gene expression databases and analyses tools 851
- 7.9.1 Introduction to protein-based gene expression databases 851
- 7.9.2 The Proteome Analysis Database 853
- 7.9.3 SWISS-2DPAGE – A two-dimensional polyacrylamide gel electrophoresis database 854
- 7.10 Further gene-expression databases in the internet 855
- 7.11 Summary 860
- 7.12 References 871

## List of Contributors

The complete postal addresses of all authors including their telephone and fax numbers as well as the email addresses are available at the homepage of the book publication at <http://www.wiley-vch.de/home/3-527-30488-6>.

Ruedi Aebersold,  
The Institute for Systems Biology,  
Seattle (USA)  
*Author of section 1.6*

Glenn Albrecht,  
Lynx Therapeutics, Inc.,  
Hayward, (USA)  
*Author of section 4.4.1*

Heiko Alfke,  
Philipps University,  
Marburg (Germany)  
*First and corresponding author of section 6.5;  
senior author of section 6.6; author of section 6.7*

Alon Amit,  
Compugen Ltd.,  
Jamesburg (USA)  
*Corresponding author of sections 4.2.1.3  
and 7.8.10*

Rolf Apweiler,  
The European Bioinformatics Institute,  
Hinxton (UK)  
*Senior and corresponding author of section 7.9.2*

Charles Auffray,  
Genexpress,  
Centre National de la Recherche Scientifique,  
Villejuif Cedex (France)  
*Senior and corresponding author of section 7.8.9*

Christian W. B. Bachem,  
Wageningen University and Research Centre  
(The Netherlands)  
*First and corresponding author of section 3.3.3*

Sabine Bahn,  
Babraham Institute,  
Cambridge (UK)  
*Author of section 3.3.6*

Richard Baldock,  
Western General Hospital,  
Edinburgh (UK)  
*Author of section 7.8.17*

Catherine A. Ball,  
School of Medicine,  
Stanford University, Stanford (USA)  
*First and corresponding author of section 7.8.21;  
author of section 7.8.22*

Oliver Bauer,  
Max-Planck-Institut für Molekulare Genetik,  
Berlin (Germany)  
*First author of section 4.2.2*

Martin P. Béhé,  
Philipps University,  
Marburg (Germany)  
*Author of section 6.6; first author of section 6.7*

Thomas M. Behr,  
Philipps University,  
Marburg (Germany)  
*First and corresponding author of section 6.6;  
senior and corresponding author of section 6.7*

Nicholas J. Beauchamp,  
University of Amsterdam,  
Amsterdam (The Netherlands)  
*Author of section 4.4.2*

Alexander V. Belyavsky,  
Engelhardt Institute of Molecular Biology,  
Moscow (Russia)  
*Corresponding author of section 3.3.5*

Paul Bertone,  
Yale University,  
New Haven (USA)  
*Author of section 7.8.23*

Ralf Bickel,  
Clondia Chip Technologies GmbH,  
Jena (Germany)  
*First and corresponding author  
of sections 4.2.1.4 and 4.2.1.4.4*

Gail Binkley,  
School of Medicine,  
Stanford University,  
Stanford (USA)  
*Author of sections 7.8.21 and 7.8.22*

Margaret Biswas,  
ViaLactia Biosciences Ltd.,  
Auckland (New Zealand)  
*First author of section 7.9.2*

Mark E. Bolander,  
Mayo Clinic and Foundation,  
Rochester (USA)  
*Author of sections 3.2.4.11 and 3.3.10*

Sylvie Bortoli,  
Commissariat à l'Énergie Atomique (CEA),  
Evry Cedex (France)  
*Author of section 7.8.9*

David Botstein,  
School of Medicine, Stanford University,  
Stanford (USA)  
*Author of section 7.8.21 and section 7.8.22*

Annabelle Bouchardon,  
INSERM U371 "Cerveau et Vision",  
Bron (France)  
*Author of section 3.2.4.9*

Lucas D. Bowler,  
Trafford Centre for Medical Research,  
Brighton (UK)  
*Exclusive author of section 3.2.4.7*

Christoph Bremer,  
University of Münster,  
Münster (Germany)  
*First author of sections 6.4 and 6.8*

Sydney Brenner,  
Lynx Therapeutics, Inc.,  
Hayward (USA)  
*Author of section 4.4.1*

Donald D. Brown,  
Carnegie Institution of Washington,  
Baltimore (USA)  
*Senior author of section 3.2.4.4*

Patrick O. Brown,  
Stanford University,  
Stanford (USA)  
*Author of section 7.8.22*

Iris Bruchhaus,  
Bernhard-Nocht-Institut für Tropenmedizin,  
Hamburg (Germany)  
*Senior author of section 3.2.7*

Tim Burcham,  
Lynx Therapeutics, Inc.,  
Hayward (USA)  
*Author of section 4.4.1*

Renate Burgemeister,  
P. A. L. M. Microlaser Technologies AG,  
Bernried (Germany)  
*First and corresponding author of section 2.2.6*

Stephen A. Bustin,  
Queen Mary's School of Medicine  
and Dentistry, Royal London Hospital,  
London (UK)  
*Exclusive author of section 3.3.12*

Claude Chelala,  
Genexpress,  
Centre National de la Recherche Scientifique,  
Villejuif Cedex (France)  
*Author of section 7.8.9*

Lianggui Chen,  
Digital Gene Technologies,  
La Jolla (USA)  
*Author of section 4.3.8*

Xin Chen,  
The National Laboratory of Protein  
Engineering and Plant Genetic Engineering,  
Peking University,  
Beijing (People's Republic of China)  
*Author of section 7.8.5*

Zhijian J. Chen,  
Fox Chase Cancer Center,  
Philadelphia (USA)  
*First author of section 4.3.1*

J. Michael Cherry,  
School of Medicine,  
Stanford University,  
Stanford (USA)  
*Author of section 7.8.21*

Kei-Hoi Cheung,  
School of Medicine, Yale University,  
New Haven (USA)  
*Author of section 7.8.23*

Kevin Corcoran,  
Lynx Therapeutics, Inc.,  
Hayward (USA)  
*Author of section 4.4.1*

Jonathan Crabtree,  
Center for Bioinformatics,  
University of Pennsylvania,  
Philadelphia (USA)  
*Author of section 7.8.18*

Paul Cullen,  
Ogham GmbH,  
Münster (Germany)  
*Senior author of sections 1.3.1, 1.4.1 to 1.4.3,  
1.4.5 to 1.4.8, 1.4.10, 1.4.11, 1.5, 1.8, 2.1, 2.2.1  
to 2.2.4, 2.2.7, 2.3.1, 2.4, 3.1, 3.2.4, 4.2.1.4.1 to  
4.2.1.4.3, 4.2.1.4.5 to 4.2.1.4.10, 4.2.1.5, 4.3.7,  
4.4.4, 4.4.5, 7.9.1, 7.10; first and corresponding  
author of sections 1.1, 1.3.7, 1.9, 3.5, 4.1, 4.2.1.1,  
4.2.1.2, 4.5, 5.7, 6.1, 6.9, 7.1, 7.11; author of  
sections 1.7, 3.2.4.3, 3.3.15, 3.4.2, 4.4.7, 6.3*

Nicole A. Datson,  
Leiden/Amsterdam Center for Drug Research,  
Leiden University Medical Centre,  
Leiden (The Netherlands)  
*First and corresponding author of section 4.4.3*

Duncan R. Davidson,  
Western General Hospital,  
Edinburgh (UK)  
*Corresponding author of section 7.8.17*

Jamie A. Davies,  
University of Edinburgh, Medical School,  
Edinburgh (UK)  
*Exclusive author of section 7.8.14*

Warren Davis, Jr.,  
Fox Chase Cancer Center,  
Philadelphia (USA)  
*Author of section 4.3.1*

Michael J. de Veer,  
The Walter and Eliza Hall Institute of Medical  
Research, The Royal Melbourne Hospital,  
Victoria (Australia)  
*First author of section 7.8.13*

Vivian de Waard,  
Academic Medical Center,  
University of Amsterdam (The Netherlands)  
*First author of section 4.4.2*

Charles Decraene,  
Commissariat à l'Énergie Atomique (CEA),  
Evry Cedex (France)  
*Author of section 7.8.9*

Colette Dehay,  
INSERM U371 "Cerveau et Vision",  
Bron (France)  
*Author of section 3.2.4.9*

Marie-Dominique Devignes,  
LORIA – Langue et dialogue,  
Vandoeuvre les Nancy (France)  
*Author of section 7.8.9*

Kara Dolinski,  
School of Medicine,  
Stanford University,  
Stanford (USA)  
*Author of section 7.8.21*

Peter A. Doris,  
Houston Health Sciences Center,  
Houston (USA)  
*Senior and corresponding author of section 3.3.4*

Inna Dubchak,  
Lawrence Berkeley National Laboratory,  
Berkeley (USA)  
*Exclusive author of section 7.8.2*

Selina S. Dwight,  
School of Medicine, Stanford University,  
Stanford (USA)  
*Author of section 7.8.21*

Ralf Ehrlich,  
Clondia Chip Technologies GmbH,  
Jena (Germany)  
*Author of sections 4.2.1.4 and 4.2.1.4.4*

Jean-Marc Elalouf,  
Commissariat à l'Énergie Atomique (CEA)  
Saclay,  
Gif-sur-Yvette (France)  
*Senior and corresponding author of section 4.4.7*

Thomas Ellinger,  
Clondia Chip Technologies GmbH,  
Jena (Germany)  
*Author of sections 4.2.1.4 and 4.2.1.4.4*

Michael Erren,  
University of Münster,  
Münster (Germany)  
*Senior author of section 5.5*

Eugen Ermantraut,  
Clondrag Chip Technologies GmbH,  
Jena (Germany)  
*Senior author of sections 4.2.1.4 and 4.2.1.4.4*

Eric Eveno,  
Genexpress,  
Centre National de la Recherche Scientifique,  
Villejuif Cedex (France)  
*First author of section 7.8.9*

Asun Fernandes del Carmen,  
Wageningen University and Research Centre,  
Wageningen (The Netherlands)  
*Author of section 3.3.3*

Paul B. Fisher,  
Columbia University,  
New York (USA)  
*Senior and corresponding author of sections  
3.2.4.1, 3.2.4.6 and 3.2.4.8*

Jeffrey S. Fisher,  
GenHunter Corporation,  
Nashville (USA)  
*First author of section 4.3.3*

Manfred Fobker,  
University of Münster  
Münster (Germany)  
*First and corresponding author of section 5.5*

Ellen Fricke,  
BIOBASE GmbH,  
Wolfenbüttel (Germany)  
*First author of section 7.8.5*

Laurent Gate,  
Fox Chase Cancer Center,  
Philadelphia (USA)  
*Author of section 4.3.1*

Erk Gedig,  
XanTec bioanalytics GmbH,  
Münster (Germany)  
*Exclusive author of section 5.4*

Carsten Gerdemann,  
Abbott GmbH,  
Wiesbaden (Germany)  
*Exclusive author of sections 3.2.4.10  
and 3.3.13*

Neil I. Goldstein,  
DGI Biotechnologies, Inc.,  
Edison (USA)  
*Author of section 3.2.4.1*

Jeremy Gollub,  
Stanford University,  
Stanford (USA)  
*Author of section 7.8.22*

David Goodlett,  
The Institute for Systems Biology,  
Seattle (USA)  
*Corresponding author of section 1.6*

Rahul V. Gopalkrishnan,  
Columbia University,  
New York (USA)  
*First author of section 3.2.4.1*

Gregory R. Grant,  
University of Pennsylvania,  
Philadelphia (USA)  
*Author of section 7.8.18*

David P. L. Green,  
University of Otago,  
Dunedin (New Zealand)  
*Senior and corresponding author of section 4.4.6*

Jens Grote,  
University of Münster,  
Münster (Germany)  
*Author of section 5.3*

Christoph Grunau,  
Institute de Génétique Humain,  
Montpellier (France)  
*Exclusive author of section 7.8.16*

Anna Guerasimova,  
Max-Planck-Institut für Molekulare Genetik,  
Berlin (Germany)  
*Author of section 4.2.2*

Zhen Guo,  
GenHunter Corporation,  
Nashville (USA)  
*Author of section 4.3.3*

Jörg Haberland,  
Ogham GmbH,  
Münster (Germany)  
*Exclusive author of sections 2.3.4 and 5.2*

Jennifer Harrington,  
R&D Systems, Inc.,  
Minneapolis, MS (USA)  
*Senior author of section 4.2.3*

Martin Haubrock,  
BIOBASE GmbH,  
Wolfenbüttel (Germany)  
*Author of section 7.8.5*

Joan Hebert,  
Center for Clinical Sciences Research,  
Stanford (USA)  
*Author of section 7.8.22*

Steffen Hennig,  
Max Planck Institut für Molekulare Genetik,  
Berlin (Germany)  
*First and corresponding author section of 7.2*

Tina Hernandez-Boussard,  
Center for Clinical Sciences Research,  
Stanford (USA)  
*Author of section 7.8.22*

Ralf Herwig,  
Max-Planck Institute for Molecular Genetics,  
Berlin (Germany)  
*Author of section 4.2.2, first and corresponding  
author of section 7.5*

Beate Hess,  
Würzburg (Germany)  
*Exclusive author of section 3.2.2 and 3.2.4.12*

Johannes T. Heverhagen,  
Philipps University (Germany)  
*Senior author of section 6.5*

Brian S. Hilbush,  
Digital Gene Technologies, Inc.,  
La Jolla (USA)  
*First author of section 4.3.8*

Cruz A. Hinojos,  
University of Texas-Houston,  
Health Sciences Center,  
Houston (USA)  
*Author of section 3.3.4*

Christine Hoogland,  
Swiss Institute of Bioinformatics,  
Geneva (Switzerland)  
*Exclusive author of section 7.9.3*

Sebastian Horstmann,  
University of Cologne,  
Cologne (Germany)  
*Exclusive author of section 3.2.1 and 3.3.11*

Sandrine Imbeaud,  
Genexpress,  
Centre National de la Recherche Scientifique,  
Villejuif Cedex (France)  
*Author of section 7.8.9*

Laurie Issel-Tarver,  
School of Medicine, Stanford University,  
Stanford (USA)  
*Author of section 7.8.21*

Takashi Ito,  
Cancer Research Institute,  
Kanazawa University,  
Ishikawa (Japan)  
*Author of section 3.3.8*

Michal Janitz,  
Max-Planck-Institut für Molekulare Genetik,  
Berlin (Germany)  
*Author of section 4.2.2*

Hongkai Ji,  
Tsinghua University,  
Beijing (People's Republic of China)  
*Exclusive author of section 7.8.3*

Hongping Jiang,  
Medco Health Solutions, Inc.,  
New Jersey (USA)  
*Author of section 3.2.4.6*

Heng Jin,  
Stanford University,

University of Münster,  
Münster (Germany)  
*Exclusive author of section 7.3*

Mario Kratz,  
University of Münster,  
Münster (Germany)  
*Exclusive author of section 1.2*

Anuj Kumar,  
Cellular and Developmental Biology,  
Yale University,  
New Haven (USA)  
*First author of section 7.8.23*

Karl J. Lackner,  
University Hospital Mainz,  
Mainz (Germany)  
*Exclusive author of section 3.2.5*

Sigrid Land,  
BIOBASE GmbH,  
Wolfenbüttel (Germany)  
*Author of section 7.8.5*

Claus Langer,  
University of Münster,  
Münster (Germany)  
*First and corresponding author of section 3.2.3*

Daniel J. Lavery,  
Purdue Pharma L. P.,  
Cranbury (USA)  
*Corresponding author of section 3.2.4.9*

Phuc V. Le,  
University of Pennsylvania,  
Philadelphia (USA)  
*Author of section 7.8.18*

Irina V. Lebedeva,  
Columbia University,  
New York (USA)  
*Author of section 3.2.4.1*

Hans Lehrach,  
Max Planck Institut für Molekulare Genetik,  
Berlin (Germany)  
*Author of sections 4.2.2, 7.2 and 7.5*

Magdalena Leszczyniecka,  
Novartis Pharmaceuticals,  
Summit (USA)  
*Author of section 3.2.4.1*

Ines Leube,  
Clondrag Chip Technologies GmbH,  
Jena (Germany)  
*Author of sections 4.2.1.4 and 4.2.1.4.4*

Peng Liang,  
Vanderbilt University,  
Nashville (USA)  
*Senior and corresponding author of section 4.3.3*

Junmin Liu,  
University of Pennsylvania,  
Philadelphia (USA)  
*Senior author of section 7.8.18*

Yang Liu,  
School of Medicine, Yale University,  
New Haven (USA)  
*Author of section 7.8.23*

David Lo,  
Digital Gene Technologies,  
La Jolla (USA)  
*Corresponding author of section 4.3.8*

Gerhard Lorkowski,  
Pharma Consulting,  
Münster (Germany)  
*Author of sections 4.2.1.1 and 4.2.1.2*

Stefan Lorkowski,  
University of Münster,  
Münster (Germany)  
*Senior author of sections 1.1, 1.3.17, 3.5, 4.1, 4.2.1.1, 4.2.1.2, 4.5, 5.7, 6.1, 6.9, 7.1, 7.11; senior and corresponding author of sections 1.7, 3.2.4.3, 3.4.2, 3.3.15, 6.3; first and corresponding author of sections 1.3.1, 1.4.1 to 1.4.3, 1.4.5 to 1.4.8, 1.4.10, 1.4.11, 1.5, 1.8, 1.9, 2.1, 2.2.1 to 2.2.4, 2.2.7, 2.3.1, 2.4, 3.1, 3.2.4, 4.2.1.4.1 to 4.2.1.4.3, 4.2.1.4.5 to 4.2.1.4.10, 4.2.1.5, 4.3.7, 4.4.4, 4.4.5, 7.9.1, 7.10; first author of section 4.4.7*

Hermann Lübbert,  
Biofrontera Pharmaceuticals AG,  
Leverkusen (Germany)  
*Exclusive author of section 4.3.2*

Jian-Hua Luo,  
School of Medicine, University of Pittsburgh,  
Pittsburgh (USA)  
*First and corresponding author of section 3.2.4.2*
