[Copyright](#)

[Dedication](#)

[Preface](#)

[Acknowledgements](#)

[Industry Highlights Boxes](#)

[Industry Highlights Boxes: Authors](#)

[Section 1: Overview and Historical Perspectives](#)

[Chapter 1: Introduction](#)

[1.1 What is Plant Breeding?](#)

[1.2 The Goals of Plant Breeding](#)

[1.3 The Concept of Genetic Manipulation of Plant Attributes](#)

[1.4 Why Breed Plants?](#)

[1.5 Overview of the Basic Steps in Plant Breeding](#)

[1.6 How have Plant Breeding Objectives Changed Over the Years?](#)

[1.7 The Art and Science of Plant Breeding](#)

[1.8 Achievements of Modern Plant Breeders](#)

[1.9 The Plant Breeding Industry](#)

[1.10 Duration and Cost of Plant Breeding Programs](#)

[1.11 The Future of Plant Breeding in Society](#)

[Key References and Suggested Reading](#)

[Internet Resources for Reference](#)

[Chapter 2: History of Plant Breeding](#)

[2.1 Origins of Agriculture and Plant Breeding](#)

[2.2 The “Unknown Breeder”](#)

[2.3 Plant Manipulation Efforts by Early Civilizations](#)

[2.4 Early Pioneers of the Theories and Practices of Modern Plant Breeding](#)

[2.5 Later Pioneers and Trailblazers](#)

[2.6 History of Plant Breeding Technologies/Techniques](#)

[2.7 Genome-Wide Approaches to Crop Improvement](#)

[2.8 Bioinformatics in Crop Improvement](#)

[2.9 Plant Breeding in the Last Half Century](#)

[Key References and Suggested Reading](#)

Section 2: Population and Quantitative Genetic Principles

Chapter 3: Introduction to Concepts of Population Genetics

- 3.1 Concepts of a Population and Gene Pool
- 3.2 Issues Arising from the Hardy-Weinberg Equilibrium
- 3.3 Factors Affecting Changes in Gene Frequency
- 3.4 Frequency Dependent Selection
- 3.5 Summary of Key Plant Breeding Applications
- 3.6 Modes of Selection
- 3.7 Effect of Mating System on Selection
- 3.8 The Concept of Inbreeding
- 3.9 Inbreeding and its Implications in Plant Breeding
- 3.10 Concept of Population Improvement
- 3.11 Types
- Key References and Suggested Reading
- Internet Resource

Chapter 4: Introduction to Quantitative Genetics

- 4.1 What is Quantitative Genetics?
- 4.2 Classical Quantitative Genetics
- 4.3 Molecular Quantitative Genetics
- 4.4 Systems Genetics
- 4.5 Predicting Breeding Value

[4.6 Genomic Selection \(Genome-Wide Selection\)](#)

[4.7 Mapping Quantitative Traits](#)

[Key references and suggested reading](#)

[Section 3: Reproductive Systems](#)

[Chapter 5: Introduction to Reproduction and Autogamy](#)

[5.1 Importance of Mode of Reproduction to Plant Breeding](#)

[5.2 Overview of Reproductive Options in Plants](#)

[5.3 Types of Reproduction](#)

[5.4 Sexual Reproduction](#)

[5.5 Autogamy](#)

[5.6 Genotype Conversion Programs](#)

[5.7 Artificial Pollination Control Techniques](#)

[5.8 Mendelian Concepts in Plant Breeding](#)

[5.9 Complex Inheritance](#)

[Key references and suggested reading](#)

[Chapter 6: Allogamy](#)

[6.1 What is Allogamy?](#)

[6.2 Mechanisms that Favor Allogamy](#)

[6.3 Genetic and Breeding Implications of Allogamy](#)

[6.4 Inbreeding Depression](#)

[6.5 Hybrid Vigor](#)

[6.6 Concept of Heterotic Relationship](#)

[Key References and Suggested Reading](#)

Chapter 7: Hybridization

- 7.1 Concept of Gene Transfer and Hybridization
- 7.2 Applications of Crossing in Plant Breeding
- 7.3 Artificial Hybridization
- 7.4 Artificial Pollination Control Techniques
- 7.5 Flower and Flowering Issues In Hybridization
- 7.6 Emasculation
- 7.7 Pollination
- 7.8 Number of F₁ Crosses to Make
- 7.9 Genetic Issues in Hybridization
- 7.10 Types of Populations Generated Through Hybridization
- 7.11 Wide Crosses
- 7.12 Issue of Reproductive Isolation Barriers
- 7.13 Overcoming Challenges of Reproductive Barriers
- 7.14 Bridge Crosses
- Key References and Suggested Reading
- Internet Resource

Chapter 8: Clonal Propagation and *In Vitro* Culture

- 8.1 What is a Clone?
- 8.2 Clones, Inbred Lines, and Pure Lines
- 8.3 Categories of Clonally Propagated Species Based on Economic Use
- 8.4 Categories of Clonally Propagated Species for Breeding Purposes
- 8.5 Types of Clonal Propagation

[8.6 Importance of Clonal Propagation in Plant Breeding](#)
[8.7 Breeding Implications of Clonal Propagation](#)
[8.8 Genetic Issues in Clonal Breeding](#)
[8.9 Breeding Approaches Used in Clonal Species](#)
[8.10 Natural Propagation](#)
[8.11 *In Vitro* Culture](#)
[8.12 Micropropagation](#)
[8.13 Concept of Totipotency](#)
[8.14 Somaclonal Variation](#)
[8.15 Apomixis](#)
[8.16 Other Tissue Culture Applications](#)
[8.17 Production of Haploids](#)
[8.18 *In Vitro* Selection](#)
[8.19 Germplasm Preservation](#)
[Key References and Suggested Reading](#)
[Internet Resources](#)

[Section 4: Germplasm for Breeding](#)

[Chapter 9: Variation: Types, Origin and Scale](#)

[9.1 Classifying Plants](#)
[9.2 Rules of Classification of Plants](#)
[9.3 Operational Classification Systems](#)
[9.4 Types of Variation Among Plants](#)
[9.5 Origins of Genetic Variability](#)
[9.6 Biotechnology for Creating Genetic Variability](#)
[9.7 Scale of Variability](#)

Key References and Suggested Reading

Chapter 10: Plant Domestication

10.1 The Concept of Evolution

10.2 What is Domestication

10.3 Evolution Versus Domestication

10.4 Conscious Selection Versus Unconscious Selection

10.5 Patterns of Plant Domestication

10.6 Centers of Plant Domestication

10.7 Roll Call of Domesticated Plants

10.8 Changes Accompanying Domestication

10.9 Genetic Bottleneck

10.10 Tempo of Domestication

10.11 Genetic Architecture and Domestication

10.12 Models of Domestication

10.13 Modern Breeding is Continuation of the Domestication Process

Key References and Suggested Reading

Chapter 11: Plant Genetic Resources

11.1 Importance of Germplasm to Plant Breeding

11.2 Centers of Diversity in Plant Breeding

11.3 Sources of Germplasm for Plant Breeding

11.4 Concept of Gene Pools of Cultivated Crops

11.5 Concept of Genetic Vulnerability

11.6 What Plant Breeders Can Do to Address Crop Vulnerability

11.7 Wild (Exotic) Germplasm in Plant Breeding

[11.8 Plant Genetic Resources Conservation](#)
[11.9 Nature of Cultivated Plant Genetic Resources](#)
[11.10 Approaches to Germplasm Conservation](#)
[11.11 Germplasm Collection](#)
[11.12 Types of Plant Germplasm Collections](#)
[11.13 Managing Plant Genetic Resources](#)
[11.14 Issue of Redundancy and the Concept of Core Subsets](#)
[11.15 Germplasm Storage Technologies](#)
[11.16 Using Genetic Resources](#)
[11.17 Plant Explorations and Introductions and Their Impact on Agriculture](#)
[11.18 International Conservation Efforts](#)
[11.19 An Example of a National Germplasm Conservation System](#)
[11.20 Who Owns Biodiversity?](#)
[11.21 Understanding the Genetic Architecture of Germplasm for Crop Improvement](#)
[Key References and Suggested Reading](#)
[Internet Resources](#)

[Section 5: Breeding Objectives](#)

[Chapter 12: Yield and Morphological Traits](#)

[12.1 Physiological Traits](#)
[12.2 What is Yield?](#)
[12.3 Biological versus Economic Yield](#)
[12.4 The Ideotype Concept](#)

[12.5 Improving the Efficiency of Dry Matter Partitioning](#)

[12.6 Harvest Index as a Selection Criterion for Yield](#)

[12.7 Selecting for Yield per se](#)

[12.8 Biological Pathway to Economic Yield](#)

[12.9 The Concept of Yield Potential](#)

[12.10 The Concept of Yield Plateau](#)

[12.11 Yield Stability](#)

[12.12 Lodging Resistance](#)

[12.13 Shattering Resistance](#)

[12.14 Reduced Plant Height](#)

[12.15 Breeding Determinacy](#)

[12.16 Photoperiod Response](#)

[12.17 Early Maturity](#)

[Key references and suggested reading](#)

[Chapter 13: Quality Traits](#)

[13.1 Concept of Quality](#)

[13.2 Nutritional Quality of Food Crops](#)

[13.3 Brief History of Breeding for Improved Nutritional Quality of Crops](#)

[13.4 Breeding for Improved Protein Content](#)

[13.5 Improving Protein Content by Genetic Engineering](#)

[13.6 Breeding Improved Oil Quality](#)

[13.7 Breeding Low Phytate Cultivar](#)

[13.8 Breeding End Use Quality](#)

[13.9 Breeding Seedlessness](#)

[13.10 Breeding for Industrial Uses](#)

[13.11 Breeding Plants for Novel Traits](#)
[Key References and Suggested Reading](#)
[Internet resources](#)

[Chapter 14: Breeding for Resistance to Diseases and Insect Pests](#)

[14.1 Selected Definitions](#)

[14.2 Groups of Pathogens and Pests Targeted by Plant Breeders](#)

[14.3 Biological and Economic Effects of Plant Pathogens and Pests](#)

[14.4 Overview of the Methods for Control of Plant Pathogens and Pests](#)

[14.5 Concepts of Resistance in Breeding](#)

[14.6 Concepts of Pathogen and Host](#)

[14.7 Mechanisms of Defense in Plants Against Pathogens and Pests](#)

[14.8 Types of Genetic Host Resistance and Their Breeding Approaches](#)

[14.9 Resistance Breeding Strategies](#)

[14.10 Challenges of Breeding for Pest Resistance](#)

[14.11 Role of Wild Germplasm in Disease and Pest Resistance Breeding](#)

[14.12 Screening Techniques in Disease and Pest Resistance Breeding](#)

[14.13 Applications of Biotechnology in Pest Resistance Breeding](#)

[14.14 Epidemics and Plant Breeding](#)

[Key References and Suggested Reading](#)

Chapter 15: Breeding for Resistance to Abiotic Stresses

15.1 Importance of Breeding for Resistance to Abiotic Stresses

15.2 Resistance to Abiotic Stress and Yield Potential

15.3 Types of Abiotic Environmental Stresses

15.4 Tolerance to Stress or Resistance to Stress?

15.5 Screening for Stress Resistance

15.6 Drought Stress

15.7 Breeding Drought Resistance

15.8 Approaches for Breeding Drought Resistance

15.9 Cold Stress

15.10 Mechanisms of Resistance to Low Temperature

15.11 Selection for Low-Temperature Tolerance

15.12 Breeding for Tolerance to Low-Temperature Stress

15.13 Salinity Stress

15.14 Heat Stress

15.15 Mineral Toxicity Stress

15.16 Mineral Deficiency Stress

15.17 Oxidative Stress

15.18 Flood Stress (Water Logging)

Key References and Suggested Reading

Section 6: Selection Methods

Chapter 16: Breeding Self-Pollinated Species

16.1 Types of Cultivars

16.2 Genetic Structure of Cultivars and Its Implications

16.3 Types of Self-Pollinated Cultivars

16.4 Common Plant Breeding Notations

16.5 Mass Selection

16.6 Pure-Line Selection

16.7 Pedigree Selection

16.8 Bulk Population Breeding

16.9 Single Seed Descent

16.10 Backcross Breeding

16.11 Special Backcross Procedures

16.12 Multiline Breeding and Cultivar Blends

16.13 Composites

16.14 Recurrent Selection

Key References and Suggested Reading

Chapter 17: Breeding Cross-Pollinated Species

17.1 The Concept of Population Improvement

17.2 Concept of Recurrent Selection

17.3 Genetic Basis of Recurrent Selection

17.4 Types of Recurrent Selection

17.5 Intrapopulation Improvement Methods

17.6 Optimizing Gain from Selection in Population Improvement

17.7 Development of Synthetic Cultivars

[17.8 Backcross Breeding](#)

[Key References and Suggested Reading](#)

[Chapter 18: Breeding Hybrid Cultivars](#)

[18.1 What is a Hybrid Cultivar?](#)

[18.2 Brief Historical Perspective](#)

[18.3 The Concepts of Hybrid Vigor and Inbreeding Depression](#)

[18.4 Genetic Basis of Heterosis](#)

[18.5 Biometrics of Heterosis](#)

[18.6 Concept of Heterotic Relationship](#)

[18.7 Types of Hybrids](#)

[18.8 Germplasm Procurement and Development for Hybrid Production](#)

[18.9 Selection of Parents \(Inbred Lines\)](#)

[18.10 Field Establishment](#)

[18.11 Maintenance](#)

[18.12 Harvesting and Processing](#)

[18.13 Hybrid Seed Production of Maize](#)

[18.14 Hybrids in Horticulture](#)

[18.15 Exploiting Hybrid Vigor in Asexually Reproducing Species](#)

[18.16 Prerequisites for Successful Commercial Hybrid Seed Production](#)

[Key References and Suggested Reading](#)

[Chapter 19: Breeding Clonally Propagated Species](#)

[19.1 Clones, Inbred Lines and Pure Lines](#)

[19.2 Categories of Clonally Propagated Species for Breeding Purposes](#)

[19.3 Breeding Implications of Clonal Propagation](#)

[19.4 Genetic Issues in Clonal Breeding](#)

[19.5 Breeding Approaches Used in Clonal Crops](#)

[19.6 Advantages and Limitations of Clonal Propagation](#)

[19.7 Breeding Apomictic Cultivars](#)

[19.8 *In Vitro* Selection](#)

[Key references and suggested reading](#)

[Internet Resources](#)

[Section 7: Molecular Breeding](#)

[Chapter 20: Molecular Markers](#)

[20.1 The Concept of Genetic Markers](#)

[20.2 Use of Genetic Markers in Plant Breeding](#)

[20.3 Concept of Polymorphism and the Origin of Molecular Markers](#)

[20.4 Brief History of Molecular Markers](#)

[20.5 Classification of Molecular Markers](#)

[20.6 Enzyme-Based Markers](#)

[20.7 Hybridization-Based Markers](#)

[20.8 PCR-Based Markers](#)

[20.9 DNA Sequence-Based Markers](#)

[20.10 Comparison of Selected Molecular Markers](#)

[20.11 Desirable Properties of a Molecular Marker System](#)

[20.12 Readying Markers for Marker Assisted Selection](#)

[20.13 DNA Sequencing](#)

[Key References and Suggested Reading](#)

[Chapter 21: Mapping of Genes](#)

[21.1 Why Map Genes?](#)

[21.2 Types of Gene Maps](#)

[21.3 Principles of Linkage Mapping](#)

[21.4 Mapping Population](#)

[21.5 Identification of Polymorphic Markers](#)

[21.6 Linkage Analysis of Markers](#)

[21.7 Rendering Linkage Maps](#)

[21.8 Mapping Quantitative Trait Loci \(QTL\)](#)

[21.9 High-Resolution QTL Mapping](#)

[21.10 Bulk Segregant Analysis \(BSA\)](#)

[21.11 The Value of Multiple Populations in Mapping](#)

[21.12 Comparative Genome Mapping](#)

[21.13 Synteny](#)

[21.14 Linkage Disequilibrium and Haplotypes](#)

[21.15 Linkage Disequilibrium Mapping \(Association Mapping\)](#)

[References and suggested reading](#)

[Chapter 22: Marker Assisted Selection](#)

[22.1 The Concept of Molecular Breeding](#)

[22.2 Choosing Molecular Markers for MAS](#)

[22.3 Advantages of MAS Over Conventional Breeding Protocols](#)
[22.4 MAS Schemes](#)
[22.5 Limitations of MAS](#)
[22.6 MAS and Developing Countries](#)
[22.7 Enhancing the Potential of MAS in Breeding](#)
[Key References and Suggested Reading](#)

[Chapter 23: Mutagenesis in Plant Breeding](#)

[23.1 Brief Historical Perspectives](#)
[23.2 Types of Mutations](#)
[23.3 Mutagenic Agents](#)
[23.4 Types of Tissues Used for Mutagenesis](#)
[23.5 Factors Affecting the Success of Mutagenesis](#)
[23.6 Mutation Breeding of Seed-Bearing Plants](#)
[23.7 Mutation Breeding of Clonally Propagated Species](#)
[23.8 Mutations from Tissue Culture Systems](#)
[23.9 Using Induced Mutants](#)
[23.10 Limitations of Mutagenesis as a Plant Breeding Technique](#)
[23.11 Selected Significant Successes of Mutation Breeding](#)
[23.12 Molecular Techniques for Enhancing Efficiency of Induced Mutagenesis](#)
[23.13 Horticultural Applications of Mutagenesis](#)
[23.14 General Effects of Mutagenesis](#)
[23.15 Key Successes of Induced Mutagenesis](#)
[Key references and suggested reading](#)

[Internet resources](#)

[Chapter 24: Polyploidy in Plant Breeding](#)

[24.1 Terminology](#)

[24.2 Variations in Chromosome Number](#)

[24.3 General Effects of Polyploidy of Plants](#)

[24.4 Origin of Polyploids](#)

[24.5 Autopoloidy](#)

[24.6 Breeding Autopoloids](#)

[24.7 Natural Allopoloids](#)

[24.8 Aneuploidy](#)

[24.9 General Importance of Polyploidy in Plant Improvement](#)

[24.10 Inducing Polyploids](#)

[24.11 Use of \$2n\$ Gametes for Introgression Breeding](#)

[24.12 Haploids in Breeding](#)

[24.13 Doubled Haploids](#)

[Key References and Suggested Reading](#)

[Internet resources](#)

[Chapter 25: Molecular Genetic Modifications and Genome-Wide Genetics](#)

[25.1 What is Biotechnology?](#)

[25.2 Antisense Technology](#)

[25.3 Plant Genomics](#)

[25.4 Bioinformatics in Plant Breeding](#)

[25.5 Breeding Genetically Modified \(GM\) Cultivars](#)

[25.6 Vectors](#)

[25.7 Categories of Vectors by Functions](#)

[25.8 Cisgenesis](#)

[25.9 Zinc Finger Proteins](#)

[25.10 Engineering Pest Resistance](#)

[25.11 Is There A Future in Breeding GM Cultivars?](#)

[Key References and Suggested Reading](#)

[Section 8: Marketing and Societal Issues in Breeding](#)

[Chapter 26: Performance Evaluation for Crop Cultivar Release](#)

[26.1 Purpose of Performance Trials](#)

[26.2 Kinds of Field Trials](#)

[26.3 Designing Field Trials](#)

[26.4 The Role of the Environment in Field Trials](#)

[26.5 Genotype × Environment \(G × E\) Interaction](#)

[26.6 Stability Analysis](#)

[26.7 Non-Parametric Methods](#)

[26.8 Adaptation](#)

[26.9 Field Plot Technique in Plant Breeding](#)

[26.10 Field Plot Designs](#)

[26.11 Materials, Equipment, and Machinery for Field Evaluation of Genotypes](#)

[26.12 Crop Registration](#)

[26.13 Variety Protection](#)

[Key references and Suggested Reading](#)

Chapter 27: Seed Certification and Commercial Seed Release

27.1 The Role of Improved Seed in Agriculture

27.2 Role of the Private Sector in the Seed Industry

27.3 General Steps of Operation of the Seed Industry

27.4 The Cultivar Release Process

27.5 Multiplication of Pedigree Seed

27.6 Concept of Seed Certification

27.7 The Seed Certification Process

27.8 Seed Testing

27.9 Tagging Commercial Seed

27.10 International Role in Seed Certification

27.11 Production of Conventional Seed

27.12 Production of Hybrid Seed

Key References and Suggested Reading

Chapter 28: Regulatory and Legal Issues

28.1 The Concept of Intellectual Property

28.2 Patents

28.3 Patents in Plant Breeding and Biotechnology: Unique Issues and Challenges

28.4 Protecting Plant Varieties

28.5 The Concept of Substantial Equivalence in Regulation of Biotechnology

28.6 The Issue of “Novel Traits”

28.7 The Concept of the Precautionary Principle

28.8 Regulation and the Issue of Public Trust

[28.9 Biosafety Regulation at the International Level](#)

[28.10 Labeling of Biotechnology Products](#)

[28.11 Economic Impact of Labeling and Regulations](#)

[28.12 Legal Risks that Accompany Adoption of GM Crops](#)

[28.13 Overview of the Regulation of the Biotechnology Industry in the United States](#)

[28.14 The Impact of IPRs on Plant Breeding](#)
[Key References and Suggested Reading](#)
[Internet Resources](#)

[Chapter 29: Value-Driven Concepts and Social Concerns](#)

[29.1 Concepts of Ethical, Moral, and Values](#)

[29.2 Evolution of Social Debates on Science-Based Issues](#)

[29.3 Ethics in Plant Breeding](#)

[29.4 Risk Analysis of Biotechnology](#)

[29.5 Genetic Use Restriction Systems](#)

[29.6 Public Perceptions and Fears About Biotechnology](#)

[29.7 Some Concerns of Plant Breeders](#)

[29.8 GM Foods and the Issue of Food Allergy](#)

[29.9 The Concept of Organic Plant Breeding](#)

[29.10 Principles of Organic Plant Breeding](#)

[29.11 Acceptable Organic Plant Breeding Techniques](#)

[29.12 Making Agricultural Biotechnology More Acceptable to Society](#)

[29.13 The Halo Effect of GM Crops in the Field](#)

[29.14 The Rise of Minor Pests in GM Fields](#)

[29.15 Who Owns Biodiversity?](#)

[Key References and Suggested Reading](#)

[Internet Resources](#)

[Chapter 30: International Plant Breeding Efforts](#)

[30.1 International Crop Research Centers](#)

[30.2 The CGIAR Centers and Their Mission](#)

[30.3 Brief Overview of Plant Breeding in Developed Countries](#)

[30.4 Brief Overview of Plant Breeding in Developing Countries](#)

[30.5 Plant Breeding Efforts in Sub-Saharan Africa](#)

[30.6 Biotechnology Efforts in Developing Countries](#)

[30.7 New Approach to International-National Collaborative Breeding](#)

[30.8 Conventional Plant Breeding versus Decentralized-Participatory Plant Breeding](#)

[30.9 The Green Revolution](#)

[30.10 The Green Revolution and the Impact of International Breeding Efforts](#)

[Key References and Suggested Reading](#)

[Section 9: Breeding Selected Crops](#)

Chapter 31: Breeding Wheat

Taxonomy

31.1 Economic Importance

31.2 Origin and History

31.3 Adaptation

31.4 History of Breeding in the United States

31.5 Commercial Wheat Classes

31.6 Germplasm Resources

31.7 Cytogenetics

31.8 Genetics

31.9 General Botany

31.10 Reproductive Biology

31.11 Common Breeding Methods

31.12 Establishing a Breeding Nursery

31.13 Artificial Pollination for Hybridization

31.14 Natural Pollination

31.15 Seed Development

31.16 Common Breeding Objectives

Key References and Suggested Reading

Chapter 32: Breeding Corn

Taxonomy

32.1 Economic Importance

32.2 Origin and General History

32.3 Adaptation

32.4 History of Corn Breeding in the United States

32.5 Types of Corn

32.6 Germplasm Resources

32.7 Cytogenetics

[32.8 Genetics](#)

[32.9 General Botany](#)

[32.10 Reproductive Biology](#)

[32.11 Genetic Consequences of Reproductive Biology](#)

[32.12 Common Breeding Approaches](#)

[32.13 Establishing A Breeding Nursery](#)

[32.14 Other Nurseries](#)

[32.15 Special Environment](#)

[32.16 Artificial Pollination for Hybridization](#)

[32.17 Natural Pollination for Hybridization](#)

[32.18 Common Breeding Objectives](#)

[Key References and Suggested Reading](#)

[Chapter 33: Breeding Rice](#)

[Taxonomy](#)

[33.1 Economic Importance](#)

[33.2 Origin and History](#)

[33.3 Adaptation](#)

[33.4 Commercial Classes](#)

[33.5 Germplasm Resources](#)

[33.6 Cytogenetics](#)

[33.7 Genetics](#)

[33.8 General Botany](#)

[33.9 Reproductive Biology](#)

[33.10 Common Breeding Methods](#)

[33.11 Establishing a Breeding Nursery](#)

[33.12 Common Breeding Objectives](#)

[Key References and Suggested Reading](#)

Chapter 34: Breeding Sorghum

34.1 Economic Importance

34.2 Origin

34.3 History of Breeding in the United States

34.4 Genetic Resources

34.5 Cytogenetics

34.6 Genetics

34.7 General Botany

34.8 Sorghum Races

34.9 Grain Sorghum Groups

34.10 Reproductive Biology

34.11 Pollination

34.12 Common Breeding Methods

34.13 Establishing a Breeding Nursery

34.14 Artificial Pollination

34.15 Natural Pollination

34.16 Seed Development

34.17 Harvesting

34.18 Common Breeding Objectives

Key References and Suggested Reading

Chapter 35: Breeding Soybean

35.1 Economic Importance

35.2 History and Origin

35.3 History of Breeding

35.4 Genetic Resources

35.5 Cytogenetics

35.6 Genetics

35.7 General Botany

[35.8 Cultivars](#)

[35.9 Reproductive Biology](#)

[35.10 Common Breeding Methods](#)

[35.11 Establishing a Breeding Nursery](#)

[35.12 Artificial Hybridization](#)

[35.13 Natural Hybridization](#)

[35.14 Seed Development](#)

[35.15 Harvesting](#)

[35.16 Common Breeding Objectives](#)

[References and Suggested Reading](#)

[Internet resource](#)

[Chapter 36: Breeding Peanut](#)

[36.1 Economic Importance](#)

[36.2 Origin and History](#)

[36.3 Market Types](#)

[36.4 Genetic Resources](#)

[36.5 Cytogenetics](#)

[36.6 General Botany](#)

[36.7 Reproductive Biology](#)

[36.8 Common Breeding Methods](#)

[36.9 Establishing A Breeding Nursery](#)

[36.10 Artificial Pollination](#)

[36.11 Common Breeding Objectives](#)

[Key References and Suggested Reading](#)

[Chapter 37: Breeding Potato](#)

[37.1 Economic Importance](#)

[37.2 Origin and History](#)

[37.3 Adaptation](#)
[37.4 Genetic Resources](#)
[37.5 Cytogenetics](#)
[37.6 Genetics](#)
[37.7 General Botany](#)
[37.8 Cultivars](#)
[37.9 Reproductive Biology](#)
[37.10 Common Breeding Methods](#)
[37.11 Establishing a Breeding Nursery](#)
[37.12 Artificial Pollination for Hybridization](#)
[37.13 Natural Pollination](#)
[37.14 Seed Development](#)
[37.15 Breeding Objectives](#)
[Key references and Suggested Reading](#)
[Internet resources](#)

[Chapter 38: Breeding Cotton](#)

[38.1 Economic Importance](#)
[38.2 Origin and History](#)
[38.3 Germplasm Resources](#)
[38.4 Cytogenetics](#)
[38.5 Genetics](#)
[38.6 Cultivars](#)
[38.7 American Upland Cotton](#)
[38.8 General Botany](#)
[38.9 Reproductive Biology](#)
[38.10 Common Breeding Methods](#)
[38.11 Establishing A Breeding Nursery](#)
[38.12 Artificial Crossing](#)

[38.13 Natural Pollination](#)
[38.14 Seed Development](#)
[38.15 Breeding Objectives](#)
[Key References and Suggested Reading](#)

[Chapter 39: Breeding Tomato](#)

[39.1 Economic Importance](#)
[39.2 Origin and History](#)
[39.3 Commercial Market Classes](#)
[39.4 Tomato Types](#)
[39.5 Germplasm](#)
[39.6 Cytogenetics](#)
[39.7 Genetics](#)
[39.8 General Botany](#)
[39.9 Brief History of Tomato Breeding](#)
[39.10 Breeding Objectives](#)
[39.11 Common Breeding Methods](#)
[Key Reference and Suggested Reading](#)

[Chapter 40: Breeding Cucumber](#)

[40.1 Economic Importance](#)
[40.2 Origin and History](#)
[40.3 Commercial Market Classes](#)
[40.4 Cytogenetics and Genetics](#)
[40.5 General Botany](#)
[40.6 Common Breeding Methods](#)
[40.7 Breeding Objectives](#)
[Key Reference and Suggested Reading](#)
[Internet resource](#)

Chapter 41: Breeding Roses

41.1 Economic Importance

41.2 Origin and History

41.3 Classification of Roses

41.4 Commercial Classes

41.5 Stages of Bloom

41.6 Cytogenetics

41.7 Genetics

41.8 General Botany

41.9 Reproductive Biology

41.10 Pollination

41.11 Common Breeding Methods

41.12 Common Breeding Objectives

41.13 The Creation of The Blue Rose

Internet Resources

Supplementary Chapters: Review of Genetic Statistical Principles

1: Plant Cellular Organization and Genetic Structure: An Overview

S1.1 The Unit of Organization of Living Things

S1.2 Levels of Eukaryotic Organization

S1.3 The Plant Cell and Tissue

S1.4 Plant Genome

S1.5 Chromosomes and Nuclear Division

S1.6 Genetic Linkage and Its Implications

S1.7 Chromosome Mapping
