1 Introduction: Modern Wind Energy and Its Origins 1

1.1 Modern Wind Turbines 2

1.1.1 Modern Wind Turbine Design 3

1.1.1.1 Rotor 4

1.1.1.2 Drivetrain 4

1.1.1.3 Generator 5

1.1.1.4 Nacelle and Yaw System 5

1.1.1.5 Support Structure and Stationkeeping System 5

1.1.1.6 Controls 6

1.1.1.7 Balance of Electrical System 7

1.1.2 Power Output Prediction 7

1.1.3 Other Wind Energy Concepts 8

1.2 History of Wind Energy 8

1.2.1 A Brief History of Windmills 10

1.2.2 Early Wind Generation of Electricity 14

1.2.3 The Re-Emergence of Wind Energy 15

1.2.4 Technological Underpinnings of Modern Wind Turbines 18

1.2.5 Trends 18

1.2.6 Wind Farms/Wind Power Plants 18

1.3 Rationale for Wind Energy 19

1.4 Offshore Wind Energy 19

1.5 Reference Wind Turbine 21

1.6 Layout of the Book 22

References 22

2 Wind Characteristics and Resources 25

2.1 Introduction 25

2.2 General Characteristics of the Wind Resource 26

2.2.1 Wind Resource: Global Origins 26

2.2.1.1 Overall Global Patterns 26

2.2.1.2 Mechanics of Wind Motion 26

2.2.1.3	Other Atmospheric Circulation Patterns	28
2.2.2	Temporal and Spatial Characteristics of the Wind	28
2.2.3	Estimation of Potential Wind Resource	32
2.2.3.1	Available Wind Power	32
2.2.3.2	Estimates of Worldwide Resource	33
2.3	Characteristics of the Atmospheric Boundary Layer	34
2.3.1	Atmospheric Density and Pressure	34
2.3.2	Stability of the Atmospheric Boundary Layer	35
2.3.2.1	Lapse Rate	35
2.3.2.2	Monin–Obukov Stability Length	36
2.3.3	The Steady Wind: Wind Speed Variation with Height	36
2.3.3.1	Logarithmic Profile (Log Law)	37
2.3.3.2	Power Law Profile	38
2.3.3.3	Vertical Wind Shear Offshore	39
2.3.4	Wind Shear and Stability	39
2.3.5	Effect of Terrain on Wind Characteristics	40
2.3.5.1	Classification of Terrain	40
2.3.5.2	Flow Over Flat Terrain with Obstacles	41
2.3.5.3	Flow in Flat Terrain with a Change in Surface Roughness	42
2.3.5.4	Characteristics of Non-flat Terrain: Small-scale Features	42
2.3.5.5	Characteristics of Non-flat Terrain: Large-scale Features	43
2.4	Wind Data Analysis and Resource Estimation	44
2.4.1	General Aspects of Wind Turbine Energy Production	44
2.4.2	Direct Methods of Data Analysis, Resource Characterization, and Turbine Productivity	45
2.4.2.1	Direct Use of Data	45
2.4.2.2	Method of Bins	45
2.4.2.3	Velocity and Power Duration Curves from Data	46
2.4.3	Statistical Analysis of Wind Data	47
2.4.3.1	Probability Density Function	48
2.4.3.2	Cumulative Distribution Function	49
2.4.3.3	Commonly Used Probability Distributions	49
2.5	Wind Turbine Energy Production Estimates Using Statistical Techniques	51
2.5.1	Productivity of an Idealized Turbine Using the Rayleigh Distribution	51
2.5.2	Productivity of a Realistic Turbine Using the Weibull Distribution	52
2.6	Regional Wind Resource Assessment	53
2.6.1	Overview	53
2.6.2	World Wind Resource Information	54
2.6.3	United States Resource Information	55
2.7	Wind Forecasting and Modelling from Data	55
2.7.1	Wind Forecasting Overview	55
2.7.2	Wind Modeling from Data via Reanalysis	58
2.8	Wind Measurement and Instrumentation	58
2.8.1	Overview	58
2.8.2	Wind Speed Measuring Instrumentation	59
2.8.2.1	Cup Anemometers	59
2.8.2.2	Propeller Anemometers	60
2.8.2.3	Sonic Anemometers	60

2.8.2.4	Acoustic Doppler Sensors (Sodar)	61
2.8.2.5	Laser Doppler Sensors (Lidar)	62
2.8.3	Wind Direction Instrumentation	63
2.8.4	Instrumentation Towers	63
2.8.5	Data Recording Systems	64
2.8.6	Wind Data Processing	64
2.8.7	Overview of a Wind Monitoring Program	65
2.9	Additional Topics	65
2.9.1	Use of Numerical or Computational Fluid Dynamic Models for Flow Characterization	66
2.9.2	Micrositing	66
2.9.3	Mesoscale to Microscale Flow Modeling	66
2.9.4	Statistically Based Resource Assessment Techniques/Measure-Correlate Predict Approach	66
	References	68

3 Aerodynamics of Wind Turbines 71

3.1	General Overview	71
3.2	Idealized Wind Turbine Rotor and Actuator Disc Theory	72
3.2.1	One-dimensional Momentum Theory and the Betz Limit	72
3.2.1.1	Assumptions	72
3.2.1.2	Results of the 1D Momentum Theory	73
3.2.1.3	Maximum Power Production – the Betz–Joukowski Limit	76
3.2.1.4	*Discussion on the Assumptions	77
3.2.2	Simplified Two-Dimensional Momentum Theory (with wake rotation)	77
3.2.2.1	Introduction and Main Assumptions	77
3.2.2.2	Main Equations of the 2D Momentum Theory	78
3.2.2.3	Maximum Power Coefficient	80
3.2.3	*General 2D Momentum Theory	82
3.2.3.1	Momentum Theory Equations for Arbitrary Control Volumes	82
3.2.3.2	The General 2D Momentum Theory	83
3.2.4	*Actuator Disc Vorticity Formulation and Link to Momentum Theory	84
3.2.4.1	Velocity–Pressure and Vorticity Formulations	84
3.2.4.2	Vorticity Formulation of the Ideal Actuator Disc without Wake Rotation	85
3.2.4.3	Approximate Solution Using a Vortex Cylinder	86
3.2.4.4	Vorticity Formulation of an Actuator Disc with Wake Rotation	87
3.2.4.5	Approximate Formulation and Relation to Strip Theory	88
3.3	Airfoils and General Concepts of Aerodynamics	88
3.3.1	Airfoil Terminology	88
3.3.2	Lift, Drag, and Nondimensional Parameters	90
3.3.3	Flow Over an Airfoil	91
3.3.4	Airfoil Behavior	92
3.3.4.1	Attached Flow Regime	95
3.3.4.2	High Lift/Stall Development Regime	95
3.3.4.3	Flat Plate/Fully Stalled Regime	97
3.3.4.4	Modeling of Post-stall Airfoil Characteristics	97
3.3.5	Airfoils for Wind Turbines	97
3.3.6	Lift vs. Drag Machines	98
3.3.6.1	Drag Machines	98

3.3.6.2	Lift Machines	100
3.3.7	Blade Element Theory	100
3.3.7.1	Assumptions of the Blade Element Theory	100
3.3.7.2	General Relations of the Blade Element Theory	101
3.3.7.3	Blade Element Theory for a Rotor with Straight Blades	102
3.3.7.4	Results Using the Induction Factors	104
3.4	Aerodynamic Blade Design for Modern Horizontal Axis Wind Turbines	104
3.4.1	Simple Aerodynamic Design	104
3.4.2	Design Requirements	104
3.4.3	Load Case Simulations	104
3.4.4	Multidisciplinary Design	105
3.5	Steady-State Performance Prediction: The Blade Element Momentum Method	105
3.5.1	The Blade Element Momentum Equations	105
3.5.1.1	Summary of Blade Element Theory Results	105
3.5.1.2	Summary of Momentum Theory Results	106
3.5.1.3	Momentum Theory for a Finite Number of Blades – Tip Losses	106
3.5.1.4	Blade Element Momentum Theory Equations	107
3.5.1.5	*BEM Equations with Coning and Prebend	107
3.5.1.6	Blade Element Momentum Theory Equations Without Drag	107
3.5.2	BEM Algorithm – Solution Methods	108
3.5.2.1	Method 1 – Iterative Solution for a and a'	108
3.5.2.2	Method 2 – Solving for C_l and α	109
3.5.3	Computing the Rotor Performances	109
3.5.3.1	Power Coefficient without Drag in the Induction Factors	110
3.5.4	Effect of Drag and Blade Number on Optimum Performance	110
3.5.5	Performance Curves for a Given Design – $C_P - \lambda$ Curves	111
3.5.6	Advanced Flow Configurations and Aerodynamic Challenges	113
3.5.6.1	Multiple Solutions to Blade Element Momentum Equations	113
3.5.6.2	Wind Turbine Flow States	113
3.5.6.3	Rotor Modeling for the Turbulent Wake State	113
3.5.6.4	Blade Coning, Advanced Flows, and Aerodynamic Challenges	114
3.6	Simplified Performance Analyses and Designs	115
3.6.1	Blade Shape for Ideal Rotor without Wake Rotation	116
3.6.2	Blade Shape for Optimum Rotor with Wake Rotation	118
3.6.3	Linearized HAWT Rotor Performance Calculation Procedure	120
3.6.4	Aerodynamic Rotor Design Procedure Using the Steady BEM	121
3.6.4.1	Determine Basic Rotor Parameters	122
3.6.4.2	Define the Blade Shape	122
3.6.4.3	Solve the BEM Equations	123
3.6.4.4	Calculate Rotor Performance and Modify Blade Design	125
3.7	*Advanced Methods of Rotor Analysis	125
3.7.1	The General Structure of Lifting-Line-Based Algorithms	126
3.7.1.1	Introduction	126
3.7.1.2	Cross-sectional Loads	127
3.7.1.3	Lifting-line Algorithm	127
3.7.2	Unsteady Blade Element Momentum Method	128
3.7.2.1	Introduction	128

3.7.2.2	Unsteady Aerodynamic Effects	128
3.7.2.3	Unsteady Relative Velocity: Frozen Turbulence and Rotational Sampling	128
3.7.2.4	Yaw and Tilt: Skew Model	129
3.7.2.5	Tower Influence (Tower Shadow and Tower Wake)	130
3.7.2.6	Nacelle Influence	131
3.7.2.7	Unsteady Airfoil Aerodynamics	131
3.7.2.8	Dynamic Inflow	132
3.7.2.9	Modified Steady-State BEM Equations	133
3.7.2.10	Overall Structure of an Unsteady BEM Algorithm	134
3.7.3	Vortex Methods and Vortex Theory	135
3.7.3.1	Introduction to Vortex Methods	135
3.7.3.2	Velocity Fields from a Vorticity Distribution – Biot–Savart Law and Poisson Equation	136
3.7.3.3	Vortex Lattice Method	137
3.7.3.4	Advanced Vortex Methods	138
3.7.3.5	Advantages and Limitations of Vortex Methods	138
3.7.4	Computational Fluid Dynamics (CFD)	139
3.7.4.1	Introduction	139
3.7.4.2	Challenges of CFD	139
3.7.4.3	Actuator-Disc and Actuator-Line Methods	140
3.7.4.4	Blade-Resolved CFD	140
3.7.5	Validation and Modelling Challenges	140
3.8	Aerodynamics of Vertical Axis Wind Turbines	141
3.8.1	General Overview	141
3.8.2	Aerodynamics of a Straight-blade Vertical Axis Wind Turbine	141
3.8.2.1	Single Stream Tube Analysis	142
3.8.2.2	Multiple Stream Tube Momentum Theory	145
3.8.2.3	Double Multiple Stream Tube Momentum Theory	146
3.8.3	Aerodynamics of the Darrieus Rotor	146
3.8.4	Savonius Rotor	147
	References	147

4	Mechanics and Dynamics	153
4.1	Background	153
4.2	Wind Turbine Motions and Loads	153
4.2.1	Motions	153
4.2.1.1	Blade Motions	154
4.2.1.2	Nacelle and Shaft Motions	154
4.2.1.3	Tower Motions	154
4.2.1.4	Offshore Support Structure/Platform Motions	155
4.2.2	Types of Loads	155
4.2.2.1	Steady Loads	155
4.2.2.2	Cyclic Loads	155
4.2.2.3	Transient Loads	155
4.2.2.4	Stochastic Loads	156
4.2.2.5	Resonance-Induced Loads	156
4.2.3	Sources of Loads	156
4.2.3.1	Aerodynamics	157

4.2.3.2	Gravity	157
4.2.3.3	Dynamic Interactions	157
4.2.3.4	Mechanical Control	157
4.2.4	Effects of Loads	157
4.2.5	Expressions for the Loads Acting on a Rigid Wind Turbine	157
4.2.5.1	General Integration of Loads on a Component	157
4.2.5.2	Aerodynamic Thrust and Torque on the Rotor	158
4.2.5.3	Bending Moments and Stresses on the Rotor	159
4.2.5.4	Drivetrain Loads	160
4.2.5.5	Tower Loads	160
4.2.5.6	Offshore Wind Turbine Substructure Loads	160
4.3	General Principles of Mechanics	161
4.3.1	Selected Topics from Basic Mechanics	161
4.3.1.1	Coordinate Transformations and Rotations	161
4.3.1.2	Inertial Forces	161
4.3.1.3	Area Moment of Inertia	162
4.3.1.4	Mass Moment of Inertia	164
4.3.1.5	*Inertia Tensor for Three-bladed and Multibladed Rotors	164
4.3.2	Bending of Cantilevered Beams	165
4.3.2.1	Deflection of a Tapered, Hollow Cylinder	166
4.3.2.2	Mass of a Tapered, Hollow Cylinder	167
4.3.2.3	Finite Difference Calculations for a Cantilever	167
4.3.3	Rigid Body Planar Rotation	168
4.3.3.1	Two-Dimensional Rotation	168
4.3.3.2	Rotational Power/Energy	168
4.3.4	Gears and Gear Ratios	169
4.3.5	Gyroscopic Motion	169
4.3.6	Vibrations: Single Degree of Freedom	170
4.3.6.1	Undamped Vibrations	170
4.3.6.2	Damped Vibrations	171
4.3.6.3	Forced Harmonic Vibrations	171
4.3.6.4	*Equation of Motion for an Arbitrary Forcing, and Its Linearization	172
4.3.7	Rotational Equations of Motion and Vibration	173
4.3.8	Introduction to Vibration of Cantilevered Beams	173
4.3.8.1	Modes and Mode Shapes	173
4.3.8.2	General Equation for Vibration of Beams	174
4.3.8.3	Vibration of Uniform Cantilevered Beams	174
4.3.8.4	Vibration of Nonuniform Cantilevered Beams	175
4.4	Methods for Modeling Wind Turbine Structural Response	175
4.4.1	Lumped Parameter Method	176
4.4.2	Modal Analysis Method and Shape Function Approach	176
4.4.3	Finite Element Method	177
4.4.4	Multibody Analysis	177
4.4.5	Multi-Physics (Aeroelastic) Wind Turbine Models	178
4.5	*Equations of Motion of a Wind Turbine – Discrete and Continuous systems	178
4.5.1	Derivation of the Equations of Motion	178
4.5.2	Equations of Motion for Multiple Degrees of Freedom System	178

4.5.3	Examples of Rigid Body Wind Turbine Models with Few Degrees of Freedom	179
4.5.3.1	Example: Two-DOF Model of an Onshore Wind Turbine (Shaft and Tower-top)	179
4.5.3.2	Example: Two-DOF Drivetrain Model	180
4.5.3.3	Example: Two-DOF Model of a Floating Wind Turbine	180
4.5.4	Solution of the System of Equations	180
4.5.5	Continuous Systems	181
4.5.5.1	Equations of Motion	181
4.5.5.2	Discretization Techniques	181
4.5.5.3	Solution	181
4.5.5.4	Myklestad Method	181
4.6	*Wind Turbine Models Using the Assumed Shape Function Approach	183
4.6.1	Equations of Motion for an Isolated Beam Described Using One Shape Function	184
4.6.2	Illustration of the Tower Softening Effect Using a Beam and a Top Mass	185
4.6.3	Illustration of Centrifugal Stiffening	186
4.6.4	The Assumed Shape Function Approach with Multiple Shape Functions	188
4.6.4.1	General Principle of the Assumed Shape Function Approach	188
4.6.4.2	Equations for an Isolated Beam	188
4.7	Linearized Hinge Spring Blade Model	190
4.7.1	Sources of Loads	190
4.7.2	Modeling of Blade Motion	191
4.7.3	Coordinate System	191
4.7.3.1	Flapping Equation	191
4.7.3.2	Lead-lag Equation	193
4.7.4	Solutions of the Flapping Equation	194
4.7.5	Tower Loads	196
4.7.5.1	Aerodynamic Tower Loads	196
4.7.5.2	Tower Vibration	196
4.7.5.3	Dynamic Tower Loads	196
4.7.6	Yaw Stability	197
4.7.7	Applicability and Limitations of the Linearized Hinge-Spring Dynamic Model	197
4.7.7.1	Comparison of LHSBM with <i>OpenFAST</i>	198
4.8	Linearization and Stability	200
4.8.1	*Linearization of Equations of Motions	200
4.8.2	Aerodynamic Damping	201
4.8.3	Multibladed Transformation, Campbell Diagram, and Stability	202
