*Thanks to my wife for her patience with me spending
many hours working on the book series through
the nights and over weekends.
The assistance of my son Marc Philip related to the complex
and large computer files with many sophisticated scientific
figures is also greatly appreciated.*

Marcel Van de Voorde

Series Editor Preface

Since years, nanoscience and nanotechnology have become particularly an important technology areas worldwide. As a result, there are many universities that offer courses as well as degrees in nanotechnology. Many governments including European institutions and research agencies have vast nanotechnology programmes and many companies file nanotechnology-related patents to protect their innovations. In short, nanoscience is a hot topic!

Nanoscience started in the physics field with electronics as a forerunner, quickly followed by the chemical and pharmacy industries. Today, nanotechnology finds interests in all branches of research and industry worldwide. In addition, governments and consumers are also keen to follow the developments, particularly from a safety and security point of view.

This books series fills the gap between books that are available on various specific topics and the encyclopedias on nanoscience. This well-selected series of books consists of volumes that are all edited by experts in the field from all over the world and assemble top-class contributions. The topical scope of the book is broad, ranging from nanoelectronics and nanocatalysis to nanometrology. Common to all the books in the series is that they represent top-notch research and are highly application-oriented, innovative, and relevant for industry. Finally they collect a valuable source of information on safety aspects for governments, consumer agencies and the society.

The titles of the volumes in the series are as follows:

Human-related nanoscience and nanotechnology

- *Nanoscience and Nanotechnology for Human Health*
- *Pharmaceutical Nanotechnology*
- *Nanotechnology in Agriculture and Food Science*

Nanoscience and nanotechnology in information and communication

- *Nanoelectronics*
- *Micro- and Nanophotonic Technologies*
- *Nanomagnetism: Perspectives and Applications*

Nanoscience and nanotechnology in industry

- Nanotechnology for Energy Sustainability
- Metrology and Standardization of Nanomaterials
- Nanotechnology in Catalysis: Applications in the Chemical Industry, Energy Development, and Environmental Protection

The book series appeals to a wide range of readers with backgrounds in physics, chemistry, biology, and medicine, from students at universities to scientists at institutes, in industrial companies and government agencies and ministries.

Ever since nanoscience was introduced many years ago, it has greatly changed our lives – and will continue to do so!

March 2016

Marcel Van de Voorde

About the Series Editor

Marcel Van de Voorde, Prof. Dr. ir. Ing. Dr. h.c., has 40 years' experience in European Research Organisations, including CERN-Geneva and the European Commission, with 10 years at the Max Planck Institute for Metals Research, Stuttgart. For many years, he was involved in research and research strategies, policy, and management, especially in European research institutions.

He has been a member of many Research Councils and Governing Boards of research institutions across Europe, the United States, and Japan. In addition to his Professorship at the University of Technology in Delft, the Netherlands, he holds multiple visiting professorships in Europe and worldwide. He holds a doctor honoris causa and various honorary professorships.

He is a senator of the European Academy for Sciences and Arts, Salzburg, and Fellow of the World Academy for Sciences. He is a member of the Science Council of the French Senate/National Assembly in Paris. He has also provided executive advisory services to presidents, ministers of science policy, rectors of Universities, and CEOs of technology institutions, for example, to the president and CEO of IMEC, Technology Centre in Leuven, Belgium. He is also a Fellow of various scientific societies. He has been honored by the Belgian King and European authorities, for example, he received an award for European merits in Luxemburg given by the former President of the European Commission. He is author of multiple scientific and technical publications and has coedited multiple books, especially in the field of nanoscience and nanotechnology.

Contents

Series Editor Preface	VII
About the Series Editor	IX
Foreword	XXI
Introduction	XXV

Part One Basic Elements of Nanofunctional Agriculture and Food Science 1

1	Nanotechnologies for Agriculture and Foods: Past and Future	3
	<i>Cecilia Bartolucci</i>	
	References	13
2	Nanoscience: Relevance for Agriculture and the Food Sector	15
	<i>Shahin Roohinejad and Ralf Greiner</i>	
2.1	Introduction	15
2.2	Fundamental of Nanoscience	16
2.3	Applications of Nanotechnology in the Agriculture Sector	18
2.3.1	Delivery of Agriculture Chemicals	19
2.3.2	Nanosensors/Nanobiosensors	21
2.3.3	Diagnosis and Control of Plant Diseases	22
2.3.4	Waste Reduction and Production of High-Value Added Products	22
2.4	Applications of Nanotechnology in the Food Sector	23
2.4.1	Delivery of Active Compounds	24
2.4.2	Food Packaging	25
2.4.3	Other Applications	26
2.5	Challenges of Using Nanotechnology in Agriculture and Food Sectors	27
2.6	Conclusions	28
	Acknowledgment	28
	References	28

3	Naturally Occurring Nanostructures in Food	33
	<i>Saïd Bouhallab, Christelle Lopez, and Monique A.V. Axelos</i>	
3.1	Introduction	33
3.2	Protein-based Nanostructures	34
3.2.1	Examples of Protein Nanostructures Present in Foods	35
3.2.1.1	β-Lactoglobulin	35
3.2.1.2	Serum Albumin	36
3.2.1.3	α-Lactalbumin and Lysozyme	37
3.2.1.4	Ovalbumin and Avidin	38
3.2.1.5	Transferrins	38
3.2.1.6	Osteopontin and Lactoperoxidase	39
3.2.2	Formation of Natural Nanostructure Subsequently to Molecular Interaction/Complexation	40
3.2.3	Special Case: Casein Micelles	41
3.2.3.1	Casein Micelle Composition	42
3.2.3.2	Casein Micelle Structure	42
3.3	Lipid-Based Nanostructures	44
3.3.1	Lipid Nanodroplets	44
3.3.2	Special Case: Milk Fat Globules	45
3.4	Concluding Remarks and Future Prospects	46
	References	47
4	Artificial Nanostructures in Food	49
	<i>Jared K. Raynes, Sally L. Gras, John A. Carver, and Juliet A. Gerrard</i>	
4.1	Introduction	49
4.2	Types and Uses of Artificial Organic Nanostructures Found in Food	52
4.2.1	Protein Nanostructures	52
4.2.2	Polysaccharide Nanostructures	55
4.2.3	Lipid Nanostructures	60
4.3	Conclusion	62
	References	63
5	Engineered Inorganic Nanoparticles in Food	69
	<i>Marie-Hélène Ropers and Hélène Terrisse</i>	
5.1	Introduction	69
5.2	Engineered Inorganic Materials Containing Nanoparticles	69
5.2.1	Silica (SiO ₂) and Silicates	72
5.2.2	Titania or Titanium Dioxide (TiO ₂)	74
5.2.3	Iron Oxides and Hydroxides	75
5.2.4	Silver (Ag)	75
5.2.5	Miscellaneous	76
5.2.5.1	Other Metals (Fe, Se, Ca, etc.)	76
5.2.5.2	Calcium Carbonate (CaCO ₃)	76

5.2.5.3	Calcium Chloride (CaCl ₂)	77
5.2.6	Knowledge Gaps	77
5.2.6.1	Gold (Au)	77
5.2.6.2	Aluminum (Al)	77
5.2.6.3	Zinc Oxide (ZnO)	78
5.3	Characterization of Engineered Inorganic Nanomaterials	78
5.3.1	Characterization of Engineered Inorganic Nanomaterials as Manufactured	79
5.3.2	Characterization of Engineered Inorganic Nanomaterials as Present in the Food Matrices	80
5.4	Conclusion and Perspectives	81
	References	82
6	Nanostructure Characterization Using Synchrotron Radiation and Neutrons	87
	<i>Francois Boué</i>	
6.1	Introduction	87
6.1.1	Observing at Nanosizes <i>In Situ</i>	87
6.1.2	Nanoparticles in Food and Agricultural Products: What is Here, What Can Be Seen	89
6.2	Principles	89
6.2.1	Scattering Process	89
6.2.2	q and r: Orders of Magnitude	91
6.2.3	Binary System: Contrast	91
6.2.4	Contrast Strategies	92
6.3	The Basic Information from a SAS Profile	93
6.3.1	Form Factors	93
6.3.2	Structure Factors: Interactions between Objects	97
6.4	A Few Examples: From Soft Matter to Agrofood	100
6.4.1	Proteins/Polymer: Opposite Architectures of Complexes in Mixed Systems	100
6.4.2	Lipids: Micelles, Bilayers, Crystalline Phases	102
6.4.3	A Complex but Model Structure: Casein Micelle in Cow Milk	105
6.4.4	Foams	105
6.5	Other Scattering Techniques	106
6.6	Recommendation and Practical: A Checklist for Scattering	107
6.6.1	Requirements for Sample Composition and Preparation	107
6.6.2	Sample Sizes, Volumes, and Quantities	108
6.6.3	Sample Damage	109
6.6.4	Spectrometer Setups: Sample Environment	109
6.6.5	Before and After: Proposal, Data Treatment, and Fitting	109
6.7	Summary and Conclusion	110
	References	110

Part Two Opportunities, Innovations, and New Applications in Agriculture and Food Systems 113

- 7 Nanomaterials in Plant Protection 115**
Angelo Mazzaglia, Elena Fortunati, Josè Maria Kenny, Luigi Torre, and Giorgio Mariano Balestra
- 7.1 Introduction 115
- 7.2 Nanotechnology and Agricultural Sector 117
- 7.2.1 Nanomaterials 119
- 7.2.1.1 Organic Nanomaterials 120
- 7.2.1.2 Inorganic Nanomaterials 120
- 7.2.1.3 Combined Organic/Inorganic Nanomaterials 122
- 7.2.2 Functionalization of Nanomaterials (NMs): Development of Novel Nanoformulations for Pests and Plant Pathogens Control 123
- 7.3 Applications of Nanomaterials against Plant Pathogens and Pests 125
- 7.3.1 Bacteria 125
- 7.3.2 Fungi 126
- 7.3.3 Insects 127
- 7.3.4 Virus 128
- 7.4 Conclusions 129
- References 130
- 8 Nanoparticle-Based Delivery Systems for Nutraceuticals: Trojan Horse Hydrogel Beads 135**
Benjamin Zeeb and David Julian McClements
- 8.1 Introduction 135
- 8.2 Overview of Nanoparticles-Based Colloidal Delivery Systems 136
- 8.2.1 Microemulsions 136
- 8.2.2 Nanoliposomes 137
- 8.2.3 Nanoemulsions 137
- 8.2.4 Solid Lipid Nanoparticles 137
- 8.2.5 Biopolymer Nanoparticles and Nanogels 138
- 8.3 Designing Particle Characteristics 138
- 8.3.1 Composition 138
- 8.3.2 Particle Size 139
- 8.3.3 Particle Charge 139
- 8.3.4 Particle Structure 140
- 8.4 Trojan Horse Nanoparticle Delivery Systems 140
- 8.4.1 Biopolymers as Building Blocks to Form Hydrogel Beads 140
- 8.4.2 Fabrication Methods for Hydrogel Beads 143
- 8.4.3 Thermodynamic Incompatibility 143
- 8.4.4 Complex Coacervation 144
- 8.4.5 Antisolvent Precipitation 144
- 8.4.6 Electrospinning 145
- 8.4.7 Extrusion Techniques 145
- 8.4.8 Fibril Formation 146

- 8.5 Case Study: Alginate Hydrogel Beads as Trojan Horse Nanoparticle Delivery Systems for Curcumin 146
- 8.6 Conclusions 149
- References 149

- 9 Bottom-Up Approaches in the Design of Soft Foods for the Elderly 153**
José Miguel Aguilera and Dong June Park
- 9.1 Foods and the Elderly 153
- 9.1.1 An Aging Society 153
- 9.1.2 The Elderly and Food-Related Issues 153
- 9.1.3 Special Foods for the Elderly: Texture-Modified Foods 155
- 9.2 Rational Design of Soft and Nutritious Gel Particles 155
- 9.2.1 Structure and Food Properties 155
- 9.2.2 Molecular Gastronomy: An Example of Food Design 156
- 9.2.3 Nanotechnology and Foods for the Elderly 157
- 9.2.4 Building-Up Healthy Gels with Soft Textures 158
- 9.3 Technological Alternatives for the Design of TM Foods 160
- 9.4 Conclusions 162
- Acknowledgments 163
- References 163

- 10 Barrier Nanomaterials and Nanocomposites for Food Packaging 167**
Jose M. Lagaron, Luis Cabedo, and Maria J. Fabra
- 10.1 Introduction 167
- 10.2 Nanocomposites 168
- 10.3 Nanostructured Layers 172
- 10.4 Conclusion and Future Prospects 174
- References 174

- 11 Nanotechnologies for Active and Intelligent Food Packaging: Opportunities and Risks 177**
Nathalie Gontard, Stéphane Peyron, Jose M. Lagaron, Yolanda Echegoyen, and Carole Guillaume
- 11.1 Introduction and Definitions 177
- 11.2 Nanomaterials in Active Packaging for Food Preservation 178
- 11.2.1 Nanocomposites with Antioxidant Properties 178
- 11.2.2 Nanocomposites with Antimicrobial Properties 179
- 11.3 Nanotechnology for Intelligent Packaging as Food Freshness and Safety Monitoring Solution 181
- 11.3.1 Stakes and Challenges of Nano-Enabled Intelligent Packaging 181
- 11.3.2 Main Principles of Involved Nano-Enabled Sensing 183
- 11.3.3 Indirect Nano-Enabled Indicators of Food Quality and Safety 184
- 11.3.4 Direct Nano-Enabled Indicators of Food Quality and Safety 186
- 11.4 Potential Safety Issues and Current Legislation 187
- 11.5 Conclusions and Perspectives 190
- References 191

Foreword

As defined by the European Commission in 2005,¹⁾ “Nanosciences and nanotechnologies are new approaches to research and development that concern the study of phenomena and manipulation of materials at atomic, molecular and macromolecular scales, where properties differ significantly from those at a larger scale.”

Over the last three to four decades, these approaches have emerged as a very fast expanding research area at the confluence of physics and chemistry, with a wide range of interactions with other scientific fields, such as life sciences, optics, electronics, and a broad spectrum of potential applications in many areas, such as information and communication technologies, manufacturing of materials, transportation, instruments, energy, medicine and healthcare, security, food, agriculture, water, and the environment.

However, the wide breadth and sharp growth of this key emerging scientific and technological area have resulted in debates about the very definition of nanotechnology and nanomaterials. Ten years ago, the difficulty to reach a consensual definition of nanoscience and nanotechnology was indeed well illustrated by the inaugural issue of *Nature Nanotechnology*.²⁾ Nevertheless, across the variety of perspectives reflected by the 13 recognized scientists, industrialists, and stakeholders who contributed to the “Feature” section of this issue, a few common points appear: (i) the size of the studied objects, typically 1–100 nm in one or the other of their dimensions; (ii) the very close links between science and technology, that is, between understanding and modeling the specific and often unexpected physical, chemical, or biological properties of nano-objects and the capacity to manipulate individual atoms and molecules and to manufacture nanostructures, nanodevices, and nanosystems; (iii) the broad spectrum and the magnitude of the potential applications and the subsequent need to consider and assess the diversity of impacts of nanotechnology.

2) T. Feith *et al.* 2005. Feature: Nano-tech-nolo-gy n. *Nat. Nanotechnol.*, **1**, 8–10.

Since 2006, the number of programmes, projects, and publications in nanoscience and nanotechnology has continued to increase at a very fast pace. For example, the number of papers that fall under the category *Nanoscience & Nanotechnology* of the *Core Collection* of the *Web of Science* has nearly quadrupled between 2005 (9,445 papers) and 2015 (37,751 papers). During the same period, the number of these publications that also refer to agriculture, agronomy, food, and veterinary sciences has even grown faster, by more than 10×. However, it should be noted (i) that the latter number remains fairly low (about 2–3%), compared to the total number of publications in nanoscience and nanotechnology or to the total number of papers in food, agriculture, and veterinary sciences and technologies; and (ii) that the rise of publications in nanotechnology applied to the agrifood sector started in the late 1990s, about 10 years later than in most other sectors.

The potential applications of nanotechnology in the agriculture and food sectors are manifold: from the development of sensors for monitoring the environment to the treatment of wastewater and the remediation of contaminated soils; from increasing crop yield (e.g., nanopesticides or nanofertilizers) to biosecurity (e.g., sensors for detecting pathogens along the whole food chain from the farm to fork); from cellulose-derived nanoparticles and new biomaterials to functional packaging; and from food processing to the delivery of specific food additives and ingredients. Some applications have existed for the last several years, but most of them are still under development, and it remains to be seen which will have a real economic impact. Moreover, natural nanoparticles have been existing for ever and natural nanomaterials are part of conventional food and conventional food processing.

Nanoscience and nanotechnology thus generate plenty of new opportunities for the agrifood sector and more widely for bioeconomy. Simultaneously they raise concerns about their potential impacts on environment and human health. These concerns are especially critical for the agrifood sector, because of the strong environmental footprint of agriculture and because food, along with water and air, is one of the major sources of exposition of humans to their environment. There is thus a strong need to develop nanotoxicology and nanoecotoxicology as new research areas, for example, by investigating the uptake and translocation of nanomaterials by the gastrointestinal tract. As for other technologies that have the potential to generate disruptive innovations, it is also worth assessing and monitoring the impacts of nanotechnology on the economic and social organization of the agrifood sector.

As underlined by the Joint Ethics Committee of Inra and Cirad in 2012,³⁾ agricultural and food scientists should not only contribute to understanding and predicting the specific properties of agricultural and food products related to their nanoscale structure, to exploring the potential applications of nanotechnology in the bioeconomy, including the assessment of their environmental,

health, social, and economic impacts, and to informing the agencies in charge of the regulation of new agrifood nanomaterials and nanoproducts. They should also more broadly inform the society and interact with the citizens. This book is therefore most welcome, as it brings together various sources of expertise on the different aspects related to the application of nanoscience and nanotechnology in the agrifood sector.

Introduction

Due to the growing world population and increasingly varying climate change, leading to lower yields and increasing harvest losses, feeding global population has become an international major issue. The food resources from the field to fork need to be used wisely, with minimum waste and maximum nutritional efficiency.

For this purpose nanotechnologies can play an important role. It is envisaged that the convergence between nanotechnology, plant science and agriculture will lead to revolutionary developments and advances in the next decades to improve food security and sustainability through, for examples, the re-engineering of crops at cellular level, the precision agriculture leading to water and nutrient control for more sustainable farming, the identification systems for tracking plants from origin to consumption or through the precise and the controlled release of fertilizers and pesticides, etc. In the domain of food technology, nanobiosensors will contribute to the identification of harmful molecules such as toxins or pesticides and to quick identification of spoilage processes in food. The development of nanoscience-based food with improved nutritional and palatable benefits will allow to increase food nutritional efficiency and the addition of nanoscale materials for food packaging will extend shelf life and retain quality, both contributing to waste reduction.

As for all new technologies, their application offers great potential but raise ethical questions, and when food is concerned, issues on food safety, risk and benefits, and consumer mistrust become the key ones.

This book provides detailed coverage on the state of the art and the importance of nanoscience in agriculture and food and highlights the perspectives of a science-based nanotechnology in these domains in the future. Through concrete examples, it points out the major role of nanotechnology in the improvement of food supply and in studies and applications ranging from agricultural processes and productivity to nutritional improved foodstuffs, including packaging materials for more effective storage and for secure tracking from source to the consumer to reduce spoilage. It details means to ensure safety for human and for the environment to address the current evolution of the European science policy.

The book will be of interest to students of agriculture and food sciences, physics, chemistry, and biosciences, as well as those working or planning to work in the restaurant and hospitality sectors. It will be of value to food scientists, policy makers, agrochemists and industrialists, and those with a role in consumer bodies, associations, and government agencies. Nanofoods has a global dimension, of particular importance for Europe, Japan, and the United States, but also becoming important for highly populated countries such as China, India, and South America. “Nanofoods” is becoming a hot topic and this book provides clarity and confidence.
